

FIRE NAME

K21001

FIRE SIZE:

36,300 hectares (estimated)

FIRE STATUS:

Out of Control

Conditions:

- Due to topography the winds in the Deadman Valley often increase at night. From 10 pm until 8 am crews are seeing increased fire behaviour between these hours and have adjusted tactics to use the wind to their benefit.
- Crews are continuing to build guard from Frog Lake to Cayuse Lake to Sedge Lake.
- The fire has remained within the guards.

Objectives: Objectives have not changed from yesterday:

- Crews will work to establish control lines using heavy equipment from Labonca East flank, heading north and from Carabine Hill south end from Red Lake to Sedge Lake. They will burn off and burn out from established control lines and establish pump hose lays. Damaged roads will be assessed and made passable.
- Structure protection will be established on Deadman drainage. Crews will establish a control line on the east side of community tying in from Criss drainage around Uren Mountain and up the Sabiston Forest Service Road. Crews will look for opportunities to burn off if required.
- Crews continue to work 24 hours in two shifts continuing the assignments of the day shift utilizing heavy equipment to push through guards.

Structural Protection: 6 Structural Protection crews, 2 Structural Protection Units, 2 single resources and 3 water tenders with operators.

Objectives set out yesterday (July 2, 2021) for the Structure Protection Branch in the upcoming days is to triage, setup and maintain sprinkler protection on values, Deadman, Skeetchestn, Seven Lakes, Vidette and all properties in between.

RESOURCES

Fire fighters—130
Personnel—174 persons
Heavy Equipment—33
Helicopters—14 assigned

EVACUATION ALERTS AND ORDERS:

Evacuations: The Thompson-Nicola Regional District (TNRD) has issued Evacuation Orders for a total of 164 properties and Evacuation Alerts for 994 properties.

More information is available here: [Thompson- Nicola Regional District.](#)

The Chief and Council of the [Skeetchestn](#) Indian Band have implemented an Evacuation Order for their community as of 10 pm, July 2, 2021.

Area Restriction: An Area Restriction for the Sparks Lake Fire is in effect as of July 1, 2021, at 12 noon PST. For a map of the effected area go [here.](#)

ADDITIONAL CONTACT INFORMATION:

Sparks Lake Information Section | Marg Drysdale and Greg Jonuk
 Telephone: 778-364-1265 | Email: BCWS.SparksLakeInfo@gov.bc.ca

FORECAST:

Issued: July 4, 2021 for July 5, 2021

SYNOPSIS With a weak trough across the province the fire centre region will be in a weak west-southwest flow today. This will bring isolated convection to the fire area. As the airmass is lacking moisture, strikes may be dry, and the thunderstorms may last into the overnight period. Tomorrow will see a similar pattern but with more moisture giving scattered thunderstorms to the area. Temperatures will reach near 28 C today and tomorrow and winds will be light northwest both days.

TODAY: Variable cloud with isolated thunderstorms in the vicinity. High temperature 28 C and minimum RH 23%. Winds NW 10-20 km/h.

OUTLOOK: A slack flow on Tuesday will give isolated showers or thunderstorms with minimal precipitation amounts. Temperatures will reach to near 30 C and winds will be light and variable. An upper low will cross the region Wednesday with showers and thunderstorms. Temperatures will cool to near 25 C and winds will be light to moderate southwest. The low will have passed by Thursday and an upper ridge will begin building. Patchy moisture in the flow may trigger isolated thunderstorms. Temperatures will warm to near 28 C and winds will be light west to northwest.

Mount Uren, July 4, 2021

ROLES AND RESPONSIBILITIES

BC Wildfire Service	Emergency Management BC	Local municipalities and regional districts	First Nations
<ul style="list-style-type: none"> - BCWS's jurisdiction covers all BC Parks, Crown and private lands, but does not include the boundaries of local governments that have forest fire prevention bylaws and are serviced by a fire department. - BCWS speaks directly about wildfires (i.e. fire status, operations, etc.) and is responsible for disseminating wildfire updates to local governments, stakeholders, First Nations and the public. - BCWS does <u>not</u> announce Strategic Evacuation Orders or Alerts. - BCWS <u>does</u> announce Tactical Evacuations. - In the event of an imminent threat to public safety, BCWS can authorize an immediate Tactical Evacuation of the affected area. 	<ul style="list-style-type: none"> - EMBC coordinates communication across all agencies and stakeholders to support communities. - EMBC provides advice to evacuees and support to communities regarding Emergency Operations Centres and Emergency Support Services. 	<ul style="list-style-type: none"> - Local Municipalities and Regional Districts speak directly about Strategic Evacuation Orders and Alerts in their respective jurisdictions. - Local Municipalities and Regional Districts <u>do not</u> speak about the status of a wildfire unless the fire occurs within their jurisdiction. For example, if a wildfire <u>starts</u> within the boundaries of a local government, BCWS will often assist the local fire department with suppression efforts. If the fire spreads into Crown land to become a wildfire, BCWS will often assume control. 	<ul style="list-style-type: none"> - On IR lands, Evacuation Orders and Alerts are implemented by a Band Council Resolution or other. - A designated person(s) from the respective First Nations community will speak to Evacuation Orders and Alerts on IR lands.

FIRE STAGES OF CONTROL:

Out of Control	Describes a wildfire that is not responding (or only responding on a limited basis) to suppression action, such that the perimeter spread is not being contained.
Being Held	Indicates that (with the resources currently committed to the fire) sufficient suppression action has been taken that the fire is not likely to spread beyond existing or predetermined boundaries under the prevailing and forecasted conditions.
Under Control	The fire has received sufficient suppression action to ensure no further spread of the fire.

WILDFIRE RANKS:

Rank	Description
1	<p>Characteristics: Smouldering ground fire, no open flame, white smoke, slow (i.e. creeping) rate of fire spread.</p> <p>Firefighting tactics: Direct attack with ground crews using hand tools and water delivery systems (i.e. pumps and hose).</p>
2	<p>Characteristics: Surface fire, visible, open flame, unorganised or inconsistent flame front, slow rate of spread.</p> <p>Firefighting tactics: Direct attack with ground crews using hand tools, water delivery systems, or heavy equipment. Hand constructed control lines and lines that have been cleared of combustible material will likely be successful.</p>
3	<p>Characteristics: Organised flame front – fire progressing in organised manner, occasional candling may be observed along the perimeter and/or within the fire, moderate rate of spread.</p> <p>Firefighting tactics: Hand constructed control lines alone are likely to be challenged, ground crews conducting direct attack may require air support from fixed-wing air tankers, skimmers or helicopters conducting bucketing or tanking operations. Control lines constructed by heavy equipment will generally be effective</p>
4	<p>Characteristics: Grey to black smoke, organised surface flame front, moderate to fast rate of spread on the ground, short aerial bursts through the forest canopy, short-range spotting.</p> <p>Firefighting tactics: Ground operations may not be successful at the head of the fire, indirect tactics may be required to bring the head of the fire under control. Parallel attack may be used along the flanks of the fire to direct the head into favourable ground or fuels. Air operations may be required to support ground personnel.</p>
5	<p>Characteristics: Black to copper smoke, organised crown fire front, moderate to long-range spotting and spot fire growth.</p> <p>Firefighting tactics: The limited options available include indirect attack and planned ignitions to remove fuel in the path of this type of fire behaviour. Ground operations are often restricted to fighting the least active sections of the fire or conducting ground ignition operations from secure control lines with readily available escape routes and safety zones.</p>
6	<p>Characteristics: Organised crown fire front, long-range spotting and independent spot fire growth, possible fireballs and whirls, violent fire behaviour probable, a dominant smoke column may develop which influences fire behaviour.</p> <p>Firefighting tactics: Firefighting under these conditions is extremely dangerous. Suppression efforts will be well away from active fire behaviour and may include preparing structure protection measures or conducting indirect large-scale ignition operations in an attempt to steer the fire. Often, the safest and most prudent strategy is to pull resources back to safe areas, ensure that personnel and the general public are safe, and wait for fire behaviour to lessen before re-engaging in fire suppression operations.</p>
