

WILDFIRE UPDATE

ARROW LAKE WILDFIRE COMPLEX

Octopus Creek Wildfire

(N51800)

Size: 18,337 hectares

Status: Out of control

Cause: Lightning

57 firefighters , 19 pieces of heavy equipment

Michaud Creek Wildfire

(N51765)

Size: 8,847 hectares

Status: Out of control

Cause: Lightning

33 firefighters, 13 pieces of heavy equipment

Renata Creek Wildfire

(N51688)

Size: 2,801 hectares

Status: Out of control

Cause: Lightning

1 firefighter, 9 pieces of heavy equipment

Incident Management Team and General Complex: 15 firefighters, 18 support personnel, 5 helicopters.

There are currently a total of **124 firefighters, 41 pieces of heavy equipment and 5 helicopters** assigned to the Arrow Lake Complex. Additional aircraft is available, if requested.

GENERAL WILDFIRE COMPLEX UPDATES:

It has been my pleasure to be your information officer for the past two weeks. The incoming Alberta Incident Management Team is in transition with us today and I'll be handing over the updates to Victoria Ostendorf, your new Information Officer. You can use the same email address and phone numbers as before.

We'd like to remind the residents of Fauquier and Renata who are now on evacuation alert that structure protection will remain in the community until the alert is lifted. We kindly ask that the structure protection assets such as hoses, holding pools and sprinklers, not be relocated or removed as they are strategically placed by trained firefighters.

For residents who are located in areas where the alert has been lifted, structure protection assets will be taken down over the coming days.

We ask that residents stay away from burnt forested areas. There is a significant risk of trees falling due to burnt out roots and/or wind events causing trees to fall over. With the extreme drought conditions, areas where there is any deep soil could retain ground fire for some time, and will require several days of rain to fully extinguish the hot spots.

If you have questions or concerns regarding structure protection, please contact us at the number listed below.

ADDITIONAL CONTACT INFORMATION:

WEATHER & FIRE BEHAVIOUR FORECASTS

The fires received a small amount of moisture overnight and early Wednesday morning. There is a 50 percent chance of thunderstorms and scattered showers this morning. A mixture of sun and cloud is expected this afternoon with a 25% chance of thunderstorms. Temperatures remain moderate at 27-28°C with high humidity. The smoke and higher humidity should help to reduce fire activity and improve conditions of burnable surface fuels; however, the larger fuels and deep soil remain highly combustible. Crews report reduced fire activity on the fire line. In spite of this, conditions can change rapidly, and fire behaviour could increase suddenly.

STRUCTURE PROTECTION

Structure protection was established early on and is maintained and monitored by dedicated firefighters on properties that are threatened. We ask that you please, leave the equipment in place until the alert is lifted, for the benefit and protection of your properties and structures and thank the residents for their assistance. The structural protection will remain in place until the communities are no longer threatened.

ARROW LAKE WILDFIRE COMPLEX | OBJECTIVES AND TACTICS

The overall objective of the wildfire complex is to build control lines to prevent the wildfires from approaching values at risk such as communities, properties, infrastructure, watershed and natural resources (for example: cell towers, hydro lines and major transportation corridors). Once the wildfire is contained, crews will continue to work the perimeter of the wildfire inward, removing the risk of escaping the anticipated boundaries. Control lines are built using multiple techniques, such as dozers or hand tools, to remove the burnable vegetation. In some cases, crews may use planned ignitions to remove fuel between the control lines and the fire.

Planned ignitions are essential to help contain large wildfires. They are used in situations where direct attack has limited effectiveness, or to maximize resources by reducing the area that requires suppression. Planned ignitions are monitored under the direction of a certified ignition specialist or other qualified personnel to meet pre-determined land management objectives. Opportunities for planned ignition are being explored. The exact timing of these potential burns will depend on weather and site conditions.

At various locations along the wildfire perimeter, crews and heavy equipment will continue to work together to build control lines in priority areas, largely near communities and structures. Where possible, direct attack on the wildfire will also continue.

Heavy equipment complete the control line located on the east flank of the Octopus Creek.

Spot a wildfire, smoke or illegal fire activity? Call 1 800 663-5555 or *5555 on your cellphone.

OCTOPUS CREEK | WILDFIRE UPDATE

The construction of the north flank line has been very successful. Firefighters and heavy equipment will continue to reinforce the control line, built to protect the community of Fauquier from the advancing wildfire. A small spot fire was located on the east flank near Mista Peak. It's estimated to be 0.2 ha in size and being actioned by firefighters. Heavy equipment and crews at the east flank on Koch Creek are making good progress establishing control line in the valley. This line is intended to prevent the wildfire from spreading east into adjacent valleys. The fire is slowly creeping each day; however, the crews and equipment continue to reinforce the guards. Additional heavy equipment is planned to install new guard in priority areas once the priority lines are set.

MICHAUD CREEK | WILDFIRE UPDATE

Good progress is being made by firefighters, who continue to work on the control line located to the north of the wildfire. Crews have established pumps and water hose from the lake and continue to work towards the west. The objective is to prevent the fire from growing towards the north, north west. Firefighters continue to look for and extinguish spot fires across Johnson Creek with water and hose along with helicopter assistance when visibility allows. Under the current weather conditions, firefighters anticipate they can contain the spot fires. Firefighters have now begun to establish guard line south of Michaud Creek, starting from the lake, with hand tools and pump and hose.

The majority of the wildfire has been inaccessible for rotary-wing due to smoke conditions; however, the wildfire is being monitored by satellite imagery. Planned control lines will be constructed as soon as conditions allow, with heavy equipment and planned ignition where possible.

RENATA CREEK | WILDFIRE UPDATE

On the Renata Creek wildfire, crews continue to build and reinforce control lines established in priority areas. The fire continues to back down slowly toward the community, but there is no imminent threat at this time. The structure protection unit is nearly completed in Renata.

AREA RESTRICTIONS

The BC Wildfire Service has amended an **Area Restriction Order** for the vicinity of the Octopus Creek wildfire (N51800) and Michaud Creek wildfire (N51765). This area restriction reflects the continued need to protect the public in areas where ongoing fire suppression activities are taking place. Visit www.bcwildfire.ca for more information.

EVACUATION ALERTS & ORDERS

The Regional District of Central Kootenay has issued an evacuation order and alerts in the vicinity of these wildfires. [The most current information is available at https://www.rdck.ca/](https://www.rdck.ca/)

Please be advised that the BC Wildfire Service (BCWS) does not issue evacuation orders or alerts. The BCWS works closely with Regional Districts and shares critical wildfire information. The Regional District of Central Kootenay (RDCK) will use the wildfire information, along with other critical information from local authorities and protection services, to base their decision on evacuations.

Spot a wildfire, smoke or illegal fire activity? Call 1 800 663-5555 or *5555 on your cellphone.

ARROW LAKE WILDFIRE PHOTOS

Additional photos are posted on the Information Board located at the Nakusp & District Sports Complex.

Firefighters worked through the night on the Octopus Creek Fire conducting planned ignition. Taking advantage of optimal burning conditions for such an operation.

WILDFIRE UPDATE

ARROW LAKE WILDFIRE COMPLEX MAPS | NORTH MAP

The wildfire perimeter maps is an estimate based on measurements such as GPS, aerial scanning and satellite imagery. This estimated perimeter can change as more accurate measurements become available. Areas within the fire perimeter may not have been affected or burnt by wildfire.

Spot a wildfire, smoke or illegal fire activity? Call 1 800 663-5555 or *5555 on your cellphone.

ARROW LAKE WILDFIRE COMPLEX MAPS | SOUTH MAP

The wildfire perimeter maps is an estimate based on measurements such as GPS, aerial scanning and satellite imagery. This estimated perimeter can change as more accurate measurements become available. Areas within the fire perimeter may not have been affected or burnt by wildfire.

Spot a wildfire, smoke or illegal fire activity? Call 1 800 663-5555 or *5555 on your cellphone.

FIRE STAGES OF CONTROL:

Out of Control	Describes a wildfire that is not responding (or only responding on a limited basis) to suppression action, such that the perimeter spread is not being contained.
Being Held	Indicates that (with the resources currently committed to the fire) sufficient suppression action has been taken that the
Under Control	The fire has received sufficient suppression action to ensure no further spread of the fire.

WILDFIRE RANKS:

Rank	Description
1	<p>Characteristics: Smouldering ground fire, no open flame, white smoke, slow (i.e. creeping) rate of fire spread.</p> <p>Firefighting tactics: Direct attack with ground crews using hand tools and water delivery systems (i.e. pumps and hose).</p>
2	<p>Characteristics: Surface fire, visible, open flame, unorganised or inconsistent flame front, slow rate of spread.</p> <p>Firefighting tactics: Direct attack with ground crews using hand tools, water delivery systems, or heavy equipment. Hand constructed control lines and lines that have been cleared of combustible material will likely be successful.</p>
3	<p>Characteristics: Organised flame front – fire progressing in organised manner, occasional candling may be observed along the perimeter and/or within the fire, moderate rate of spread.</p> <p>Firefighting tactics: Hand constructed control lines alone are likely to be challenged, ground crews conducting direct attack may require air support from fixed-wing air tankers, skimmers or helicopters conducting bucketing or tanking operations. Control lines constructed by heavy equipment will generally be effective</p>
4	<p>Characteristics: Grey to black smoke, organised surface flame front, moderate to fast rate of spread on the ground, short aerial bursts through the forest canopy, short-range spotting.</p> <p>Firefighting tactics: Ground operations may not be successful at the head of the fire, indirect tactics may be required to bring the head of the fire under control. Parallel attack may be used along the flanks of the fire to direct the head into favourable ground or fuels. Air operations may be required to support ground personnel.</p>
5	<p>Characteristics: Black to copper smoke, organised crown fire front, moderate to long-range spotting and spot fire growth.</p> <p>Firefighting tactics: The limited options available include indirect attack and planned ignitions to remove fuel in the path of this type of fire behaviour. Ground operations are often restricted to fighting the least active sections of the fire or conducting ground ignition operations from secure control lines with readily available escape routes and safety zones.</p>
6	<p>Characteristics: Organised crown fire front, long-range spotting and independent spot fire growth, possible fireballs and whirls, violent fire behaviour probable, a dominant smoke column may develop which influences fire behaviour.</p> <p>Firefighting tactics: Firefighting under these conditions is extremely dangerous. Suppression efforts will be well away from active fire behaviour and may include preparing structure protection measures or conducting indirect large-scale ignition operations in an attempt to steer the fire. Often, the safest and most prudent strategy is to pull resources back to safe areas, ensure that personnel and the general public are safe, and wait for fire behaviour to lessen before re-engaging in fire suppression operations.</p>
