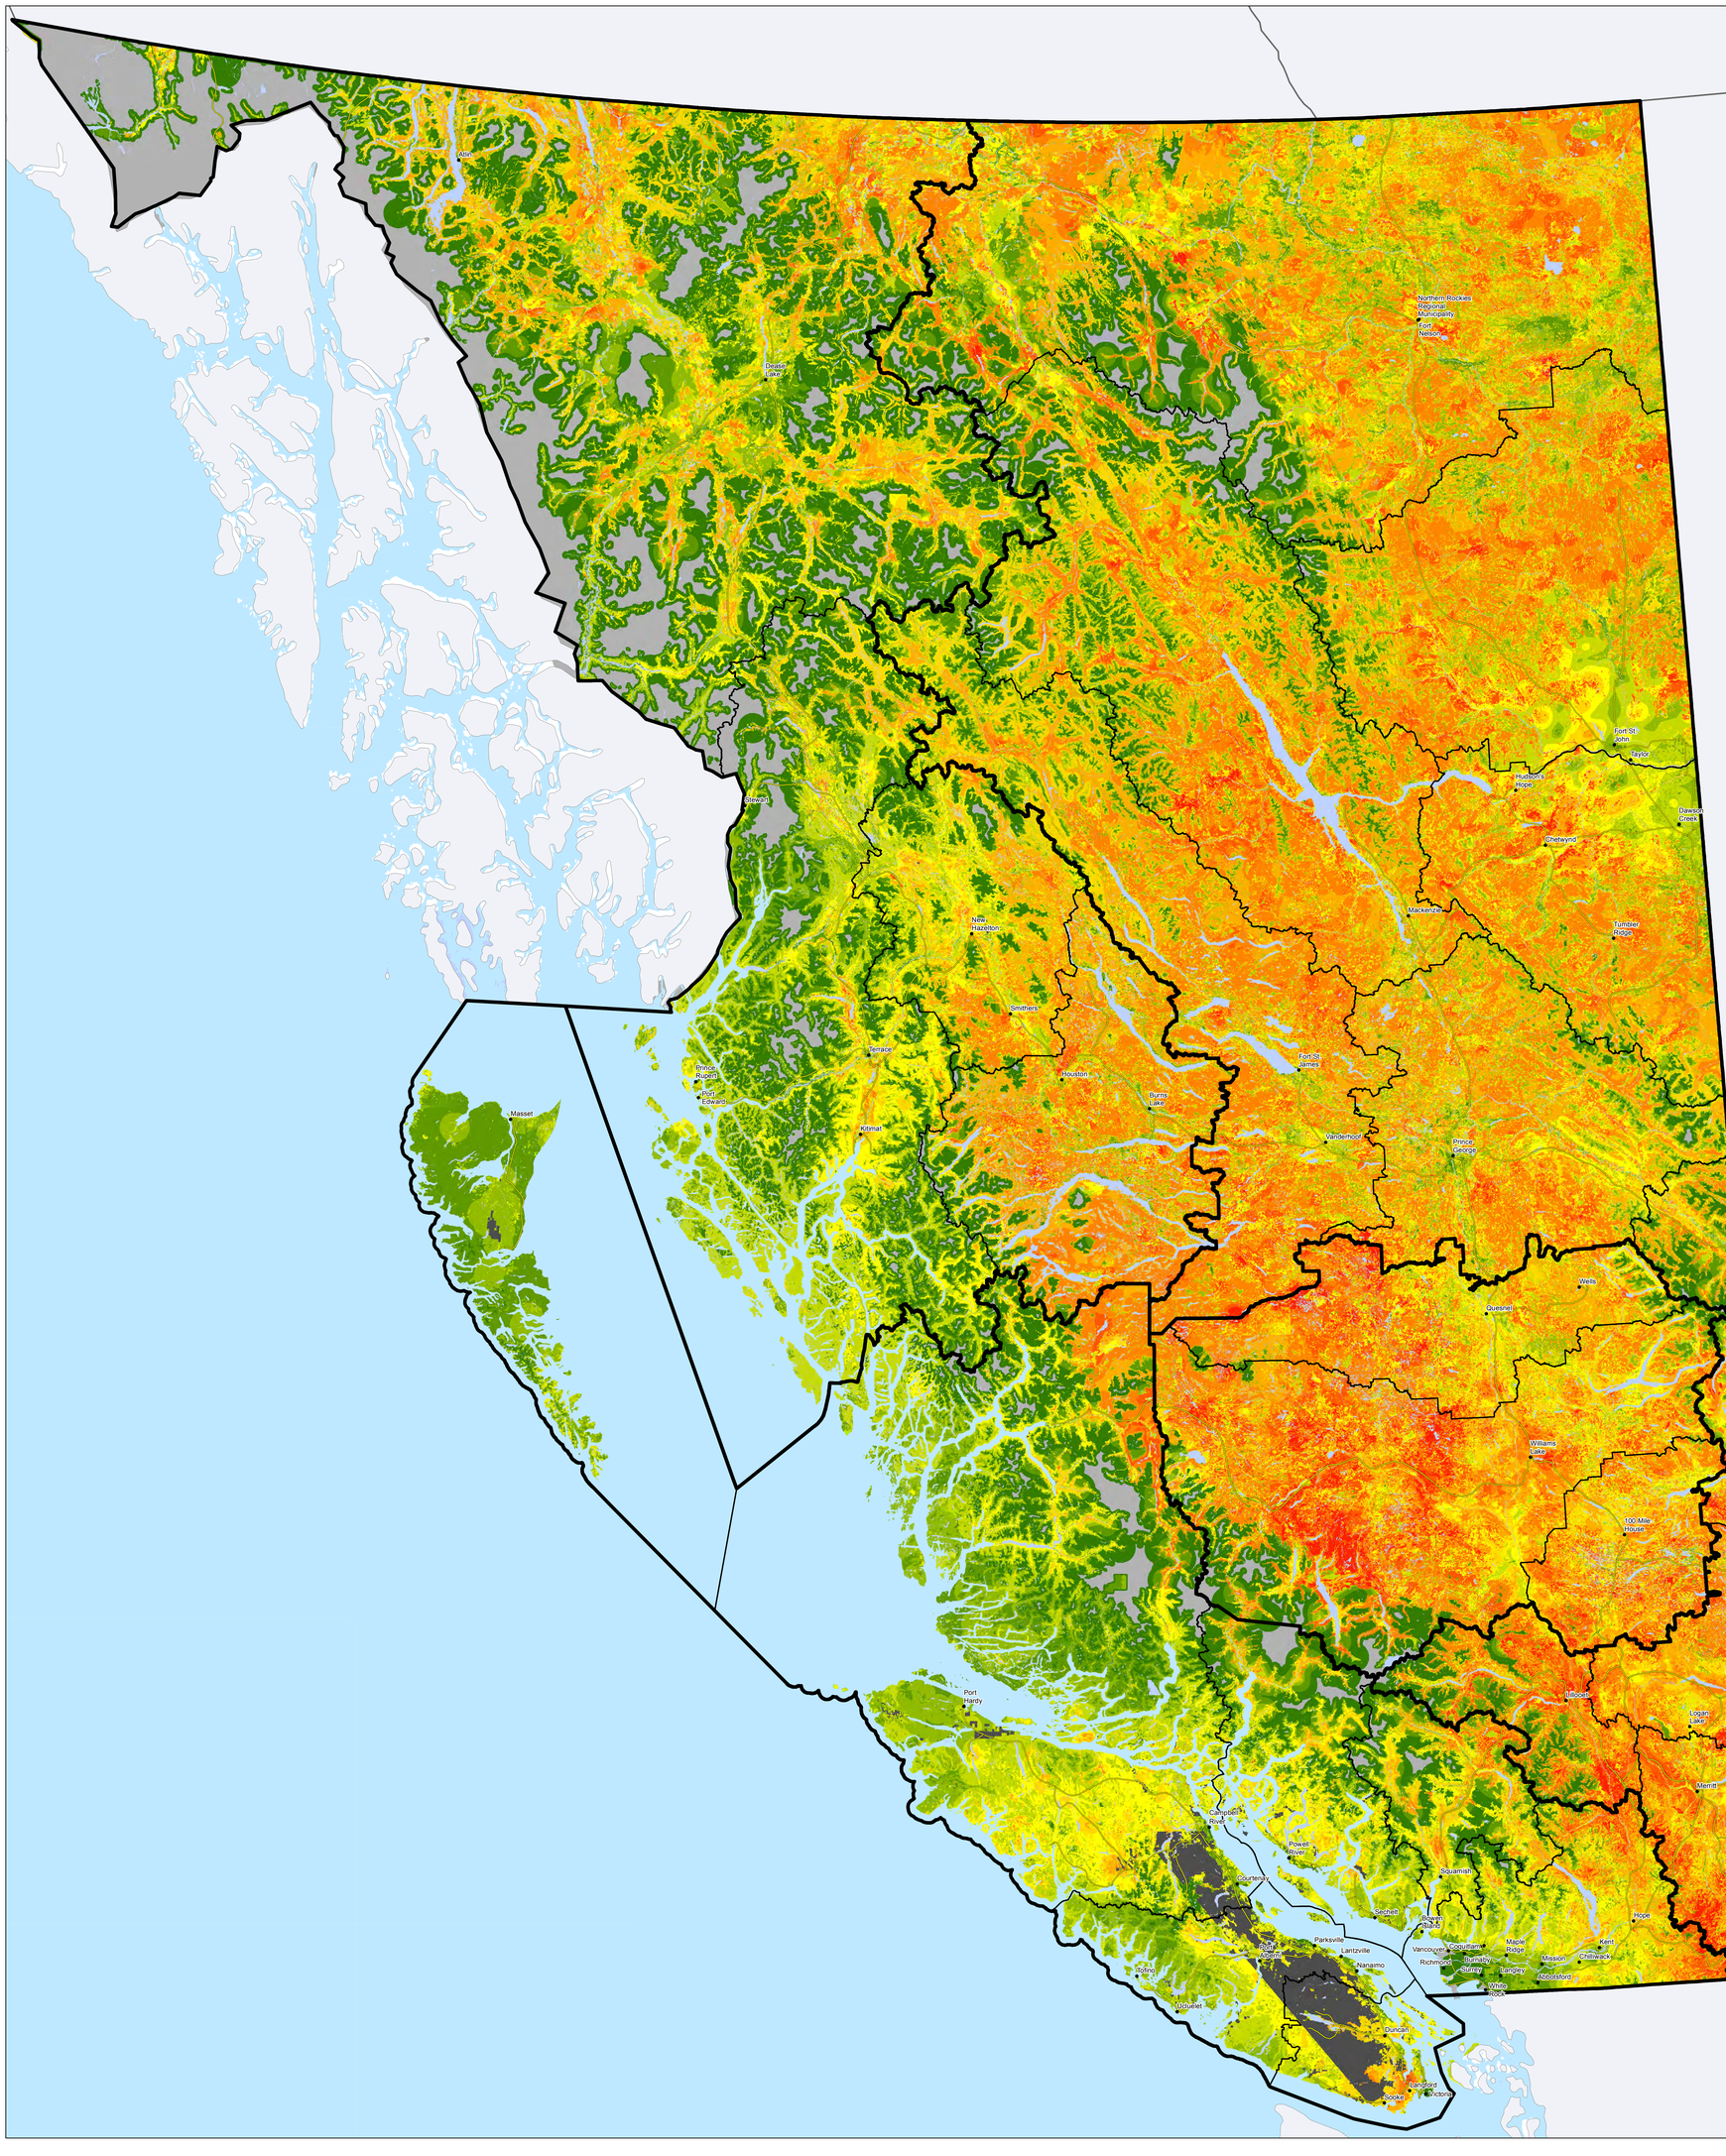
Provincial Strategic Threat Analysis
2015 Fire Threat Analysis Component
BC Wildfire Service
Fire Threat



Fire Threat

- No Data
- Water
- No Threat
- Low
- Extreme

Base Data

- Fire Centres
- Fire Zones
- Highway

Data Sources and Notes:

The Provincial Strategic Threat Analysis (PSTA) 2015 Fire Threat Analysis Component primary data inputs include:

- BC Forest Vegetation Inventory
- Provincial Digital Elevation Model (DEM)
- 90th Percentile Fire Weather
- Historical Wildfire Points > 4 Hectares
- BC Fuels Layer

All layers were derived using 50 meter raster analysis.

For the purpose of the PSTA the Wildland Urban Interface Area is defined as the 2 kilometer (km) buffer from areas with a structure density of >= 6 structures/km^2. The 1 km buffer is derived from areas with a structure density of < 6 structures/km^2. Structure density was primarily derived from AddressBC information from the Integrated Cadastral Information Society and was supplemented with TRIM and other local data.

For more information on the PSTA please visit the Prevention page on the BC Wildfire Service website
http://bcwildfire.ca/Prevention/

PSTA Disclaimer:
The information presented within the Provincial Strategic Threat Analysis 2015 Fire Threat Analysis Component is derived from datasets and models that represent a provincial-level assessment of approximate relative fire threats across the land base.
It is intended to provide a strategic-level analysis of many different factors that contribute to fire threats, but it is not intended to represent absolute, site-specific values. The PSTA 2015 Fire Threat Analysis Component was created at a provincial scale, so users of this product need to confirm that the initial wildfire-risk rating assigned to a given area is accurate by having a qualified professional validate that rating at the forest stand level.
Any limitations of the 2015 Fire Threat Analysis Component are related but not limited to the accuracy of: the Vegetation Resources Inventory (VRI); the 17 fuel types identified under the Canadian Forest Fire Behaviour Prediction (FBP) System historical fire data; and assumptions associated with the development of the head fire intensity and spotting impact data layers.
The Province of British Columbia makes no warranties or guarantees either express or implied as to the completeness, accuracy or correctness of the data portrayed in this product, nor accepts any liability arising from any incorrect, incomplete or misleading information contained therein.
All information, data and databases are provided "as is" with no warranty, express or implied, including but not limited to fitness for a particular purpose. By accessing the PSTA data, PDF files or any product derived from them, you hereby release the Province of British Columbia and its staff, employees and contractors from any and all responsibility and liability associated with their use.
