Appendix 3 – Online Multi-Tenure entry tips and examples	9
Appendix 4 – Reference Guides/Manuals/Contact Information	13

1. Application

These specifications provide direction on the form and manner, or format, of electronic submissions of silviculture reporting obligations specific to Letter Permit Salvage areas within woodlots, by describing the electronic content requirements for reports and maps. This information is supplemental to the [RESULTS Information Submission Specifications - Form and Manner of Reporting \(Woodlot Licensee Submissions\)](#) (RISS-wl) and intended only to clarify unique reporting requirements.

2. Unreported Letter Permit Blocks under a Blanket Salvage Cutting Permit (CP)

One or more letter permits authorized under a Blanket Salvage CP and recorded in the Forest Tenure Administration system (FTA) have not been reported to RESULTS and FTA shows scaled volume has been recorded for the CP. Like 1 CP blocks, there is no FTA spatial to compare to imagery.

Under a CP containing Letter Permits (LP), the LP “blocks” are entered into FTA by the District. All block IDs that exist in FTA but which do not exist in RESULTS are identified. Any LP blocks listed in FTA may be identified as potential issues.

For areas where salvage harvesting became part of a new block with silviculture obligations on or before December 31, 2018, inform district using this [FORM](#).

Activity reporting for Option #4 Application LP blocks, where free growing obligations still exist within an expired CP block, is to be done as a multi-tenure under the original cutting permit block’s opening. The guidance in this document applies to all other types of LP blocks as described below.

2.1. Types of Salvage Letter Permit Blocks as determined by post-harvest review

- 1) Clearcut Openings where Regen and Free Growing (FG) obligations were created:
 - clearcuts greater than 1 ha post-harvest (i.e. not current state of stand)
- 2) Intermediate Cut Openings where a Forest Cover (FC) Survey is required by the Code WLFMR Section 88 (4) or FRPA WLPPR Section 75 (5):
 - clearcuts ranging in size from 0.25 ha to 1 ha.
 - partial cuts resulting in a change in forest cover¹ over a continuous area of 1 ha or greater.
 - partial cuts resulting in a change in forest cover¹ over a discontinuous area of 2 ha or greater.
- 3) Salvage Openings where No Regen or FG or FC survey obligations exist:
 - Areas where salvage harvesting under letter permits occurred over an area greater than 0.25 ha and there is no change in forest cover.
 - Areas where salvage harvesting under letter permits occurred over an area less than 0.25 ha.
- 4) No logging done
 - Areas where a letter permit was issued but no logging occurred.

¹ where a change in forest cover has occurred as defined by the Silviculture Surveys Procedures Manual - 2018 (Field Stratification - page 47): i.e. change of leading species, change in inventory species composition of >20%, age class >20 years difference between leading species, height class >10 m difference, etc.

3. Reporting Process for the 4 types of salvage Letter Permit Blocks

Ortho photo and/or survey mapping will determine individual or consolidated block shapes.

Gross area will be the actual area of the sum of all block shapes included under one opening.

1) Clearcut Openings where Regen and Free Growing obligations were created

New blocks will need to be created in FTA as per DCC Section 22.02 Procedures.

RESULTS reporting will include FTWL opening definition & spatial SP map, stocking standards & spatial SU map, disturbance activity, silviculture activities (survey & if applicable, any others), forest cover & spatial FC map; as per section 5.0 of RESULTS Information Submissions Specifications – Woodlot Licences (RISS-wl) procedures.

Note: Consolidated blocks must achieve the milestones based on the earliest harvest date.

2) Intermediate Cut Openings where Forest Cover Survey is required

FTA existing LP blocks (e.g. 00/B, 10-CA, 15-FC, etc.) will be used to populate RESULTS.

Where logging was completed **on or before** December 31, 2018, harvesting authorized under Code and under FRPA must be reported in separate openings.

Where logging is completed **on or after** January 1, 2019, FRPA letter permits must be reported as a new opening(s) within the timeframes of WLPPR Section 75 (5) and (7) and Section 76.

See Appendix 1 for step-by-step reporting process.

3) Salvage Openings where No Regen or FG obligations or FC survey requirements exist

Licensee may request an intermediate cutting survey exemption under Code WLFMR Section 88 (4.1) or WLPPR Section 75 (6) **using this [FORM](#)**. Licensee will need to provide district with actual hectares logged and completion dates for each letter permit block not included as a multi-tenure under #2 above. This data is required to manually update FTA.

If an exemption request is not received or granted, these salvage openings require an intermediate cutting survey and should follow #2 above.

4) No logging done

No RESULTS reporting required. Inform district which letter permits were never logged **using this [FORM](#)**. District will manually update FTA to indicate such.

4. Closing the CP in FTA

Once all 4 types of salvage block issues have been addressed, submit a request to the district to complete the CP closures in FTA **using this [FORM](#)**.

5. Resolution Support

If you have questions or require further clarity please contact the Cariboo-Chilcotin Natural Resource District. The district's role is to provide support; e.g. answer business related questions, clarify requirements, and provide information that is not available to clients from their service provider.

Appendix 1 – Steps for reporting Intermediate Cut Openings (type 2 salvage)

(These steps are for type 2 salvage letter permit blocks only.)

The steps detailed below were written for intermediate cut salvage openings where logging was completed **on/before** December 31, 2018. Although most steps also apply to salvage openings logged **on/after** January 1, 2019, the timeframes for surveys and reporting of newly logged areas must be in accordance with WLPPR Sections 75 and 76. Some of the time saving steps below may not apply.

Step 1. Locate all paper annual reports/maps and approved letter permits maps. Contact DCC staff for a list of blocks in FTA, any FTA manually entered start/complete dates; and digital georeferenced ortho maps for various years. Find a qualified forest professional and/or service provider to complete the next steps.

Step 2. Identify, stratify, and survey areas that have resulted in:

- clearcuts between 0.25 ha and 1.0 ha,
- changes in the forest cover¹ due to partial cutting over a continuous area of 1.0 ha or greater, or
- changes in the forest cover¹ due to partial cutting over a discontinuous area of 2.0 ha or greater

For efficiency, identification of areas where surveys and/or reporting is required can be done using pre- and post-harvest ortho imagery. Areas with a visible change in forest cover as per the noted thresholds will be surveyed² to collect forest cover information.

Step 3. Create spatial for all areas in Step 2.

Step 4. Identify a single LP to serve as the Primary Opening in RESULTS for each of the Code and FRPA openings. The LP used will correspond to the largest area - where the majority of volume was removed. This LP will be the Primary Licence under the Multi-Tenure.

Gross area will be the actual area, or sum, of all block shapes included under one opening. Include only those LP blocks that are part of the spatial (map).

Step 5. Create a shell opening online, in RESULTS, using the FTA Cutting Permit and Cut Block designations for the Primary Letter Permit Block. Enter Org Unit, Opening Category (SPEX), Opening Number, Licence No, Cutting Permit, Cut Block, Opening Gross Area (**all LP blocks combined as per Step 4**), and Approval Date (date the letter permit for the Primary LP Block was approved).

See Appendix 2 examples for further details and preferred nomenclature.

Record Opening ID for the follow-up ESF submission (Step 6).

Note: Shell Opening eliminates the need for Pre-Harvest Stand Information with multiple blocks. Once saved, the Shell Opening cannot be updated with cutting permit or block information – so ensure the correct information is entered.

¹ where a change in forest cover has occurred as defined by the Silviculture Surveys Procedures Manual - 2018 (Field Stratification - page 47): i.e. change of leading species, change in inventory species composition of >20%, age class >20 years difference between leading species, height class >10 m difference, etc.

² Silviculture Surveys Procedures Manual;

Step 6. Prepare, then submit, ESF submission to populate RESULTS as per RISS-wl³

- Opening Definition – Action box is U-update. Use Opening ID. Enter Licensee Opening ID (*See Appendix 2 for preferred nomenclature*). Leave the rest blank (for Ezilink users). Attach the spatial SP information (map) of the disturbed area(s) for the opening to this layer.
- Stocking Standards – Attach spatial SU map of disturbed area(s) to this layer. Enter SU Id, Net Area, BEC and Maximum Allowable Soil Disturbance percentage.
 - Code Blocks – no Standard Regime (SSID) required.
 - FRPA Blocks - Use Default Intermediate Cut/Selection SSIDs on the Single Tree Selection tab of the Reference Guide for Forest Development Stocking Standards or an approved Intermediate Cut standard. Should match those in approved WLP.
- Multi-Tenure – List ALL letter permits where logging contributed to the reported disturbed area(s) shown on the spatial, “SP map”, for the opening. Primary as per step 4.

Adding letter permits can also be done online in RESULTS once **the opening is created with the primary license details**.

This will let FTA know the blocks are in RESULTS. See Appendix 3 for example.

Note: planned hectares are auto-populated from FTA and are unchangeable.

- Activity/Disturbance – Enter one disturbance activity for each CP **listed** under the multi-tenure
 - for start date: use approval date of first letter permit issued under each CP
 - for end date: use expiry date of last letter permit issued under each CP

See Appendix 3 for example of opening with multiple CPs.

- Activity/Silviculture – Enter all silviculture and/or survey activities conducted within the disturbed area(s) under the opening. **Activities do not need to be divided by CPs.**
- Forest Cover – Update forest cover label(s) per survey by a qualified Forest Professional. Attach FC spatial of disturbed area(s) to this layer.

Step 7. Change stocking standard to reflect No Regen Obligation and appropriate free growing dates. Add missing information for FRPA blocks. Done online in RESULTS Stocking Standard tab; use Correction (where no SSID) or Approved Variation (if SSID) to:

- toggle the No Regen Obligation button
- change Early and Late Free Growing to 1 and 3 years, respectively
- enter any missing info (eg. pref/acc species, heights) as per WLP for FRPA blocks.

Step 8. Add Comment. Done online in RESULTS under the Opening Inquiry tab; add comment explaining that opening includes:

- several letter permit blocks in FTA as per multi-tenure tab
- only one disturbance activity for each CP under multi-tenure tab
- approval date is for Primary Licence (block); some disturbance dates may be earlier
- forest cover information and map represent all letter permits under multi-tenure tab.

Note: the comment above will probably be suitable for most openings but not all – please feel free to copy and paste or adjust to suit individual circumstances.

³ Submitting Forest Cover to RESULTS for Openings with Treed Retention

Appendix 2 – Shell Opening and Opening Inquiry examples (type 2 salvage)

Shell Opening Example for Intermediate Cut Openings (for type 2 salvage letter permit blocks only)

RESULTS302 - Add New Opening

Back

Use SPEX for Intermediate Cut Openings (Type 2 salvage letter permit blocks)

Opening Gross Area should be the actual area, or sum, of all block shapes included under this opening (i.e. should match total hectares on SP and FC maps)

Enter Woodlot, CP, and Block Information (once saved, the Opening cannot be updated with this info)

Org Unit: DCC - Cariboo-Chilcotin Natural Res

Site Plan/Forest Cover Map Date
Map

Opening Number should follow DCC nomenclature = Woodlot Opening Core # plus
for pre-2019 intermediate cut openings, suggest using IC or IF added on end where IC stands for Intermediate cut CODE and IF stands for Intermediate cut FRPA
or
for post-2018 intermediate cut openings where logging occurred after 2019-01-01 continue with the next sequential opening letter (eg. last one in RESULTS is M, use N; or is AF, use AG)

Licensee Opening ID should include:
Woodlot #- salvage (Code) or (FRPA)

Original Approval = date the letter permit for the primary letter permit block was approved
Actual Disturbance Start = auto-populated with oldest disturbance date = approval date of 1st letter permit under oldest cp

Opening Gross Area = the actual area, or sum, of all block shapes included under this opening i.e. should match SP and FC map total hectares (should NOT be the total woodlot ha)

Opening Comments = explanation: "Opening and forest cover maps include several letter permit blocks but only one disturbance activity exists for each CP. Original approval is date for primary licence (block); some actual disturbance dates may be earlier."

Appendix 3 – Online Multi-Tenure entry tips and examples

Note: there is no limit to the number of multi-tenure openings you can add, but only 4 rows (blocks) show on the screen at a time.

Appendix 4 – Reference Guides/Manuals/Contact Information

The main technical support documents for surveys and woodlot submissions to RESULTS are available from the RESULTS Business and Policy Documentation website:

<https://www2.gov.bc.ca/gov/content/industry/forestry/managing-our-forest-resources/silviculture/silviculture-reporting-results/business-and-policy-documentation>

The current versions (as of March 16, 2021) of these documents are:

- [Silviculture Surveys Procedures Manual - May 2020.pdf](#)
- [RESULTS Information Submission Guide for Woodlot Licensees – Edition 3 February 24, 2016 - \(RISS-wl\)](#)
- [RESULTS Information Submission Specifications for Government Funded Activities - Edition 7 Nov 2020 - \(RISS-gf\)](#)
- [Submitting Forest Cover to Results for Openings with Treed Retention](#) guide contains additional information about submissions for openings with retained forest cover.

Please check the main website for any future updates to these documents.
