

Woodlot Data Integrity (WDI) Reports

These reports are provided to woodlot licensees to help them fulfill their legal reporting obligations. Two Forest Tenures Administration System (FTA) reports identify issues with cutting permit/block information for either expired, active, or all cutting permits of an individual woodlot. The header indicates whether the report is for all or only active or expired cutting permits. The “as of” date near the top right-hand corner of the header identifies the date of the information contained in these reports. The date in the left-hand corner of the footer identifies the date these reports were created. These two dates may differ. Any block reporting done (i.e. results or waste submissions) between those dates will not be reflected in these reports.

FTA Block Report

The Block report includes all cutting permit blocks with issues or missing information in FTA. Note letter permits are referred to as blocks for the purpose of this document and these reports.

The report identifies which cutting permit blocks:

- are absent from WASTE and/or RESULTS
- exist in RESULTS but have missing or incorrect data with direct links to FTA, namely harvest dates and disturbance complete checkmark.

A cutting permit block will only appear under one of the “Issues” Categories. A beige header box separates each category with red text describing the issue and blue text describing the action(s) required to fix the issue(s).

This report does not identify other required specific information that may be missing or incorrect in either RESULTS or WASTE (e.g. forest cover missing in RESULTS; RESULTS stocking standards not matching district manager approved Code site plan or FRPA woodlot licence plan standards; district averages incorrect in WASTE, etc). Similarly, some blocks not shown on this FTA Report may also have missing or incorrect information in RESULTS or WASTE.

FTA CP Report

The Cutting Permit (CP) report includes all cutting permits with issues related to inconsistent dates between the Harvest Billing System (HBS) scale information and FTA cutting permit effective dates, RESULTS harvest start/complete dates, and/or WASTE survey dates.

The report shows only those cutting permits with at least:

- one block with a harvest date in RESULTS, or
- one block with a survey date in WASTE

Missing information is not identified and may render this report incomplete. When individual block issues detailed in the "FTA Block Report" are resolved, new CP issues may show up.

A cutting permit will only be listed once in the report but may have several “Issues” Codes. In the beige header box of the report, each code is listed with red text describing the issue and blue text describing the action(s) required to fix the issues. The blue header box outlines the assumptions used to create this report.
