1 INTRODUCTION

The CMHC Mt. Seymour lands are a 170-ha forested area on the southern aspect of Mt. Seymour within the District of North Vancouver. The lands are best known as the home of an extensive trail system that includes popular and well-loved trails for mountain biking, hiking, and trail running. The area connects to a network of parks and conservation areas on Mt. Seymour that includes the Lower Seymour Conservation Reserve (LSCR), Mt. Seymour Provincial Park, and District of North Vancouver (DNV) parkland. Mt. Seymour itself is part of the North Shore Mountains, which are home to a series of protected natural areas at the north edge of Metro Vancouver (see fig. 1). Recreation opportunities and nature experiences on the North Shore are highly valued. Several trails in the CMHC lands cross over into multiple jurisdictions, including the Baden Powell Trail that traverses the entire North Shore.

Trails in the CMHC lands, like much of the North Shore, have characteristics of both frontcountry and backcountry trails. They are frontcountry in the sense that they back directly onto residential neighbourhoods that are part of a rapidly growing metropolitan area, and backcountry in their rugged nature, mountainous terrain, and direct connection to a vast wilderness to the north. Similarly, the CMHC lands are both a neighbourhood-level asset and a recreation destination. For residents of the adjacent Blueridge community, walking, running, and riding in the CMHC area is a part of daily life and a key component of neighbourhood identity. For mountain bikers, the area is a regional destination that draws riders from across the Lower Mainland and beyond.

1.1 WHY IS A RECREATION ACCESS MANAGEMENT PLAN NEEDED?

Though the CMHC trails are widely used and recognized as a valuable public recreation asset, they were developed without planning or authorization and are largely unregulated. The lands were previously owned by the Department of National Defence (DND) and part of the Blair Rifle Range military training area. In the late 1960s, the upper parcels were transferred to the Canada Mortgage and Housing Corporation (CMHC) in order for the Crown Corporation to develop housing. Housing was not developed, and unauthorized trails were constructed throughout the area.

In 2016, CMHC asserted its authority on the parcel for the first time in years by posting “no trespassing” signs throughout the site. There was strong public backlash to the signs, with many stakeholders and members of the public highlighting the recreation value of the area. CMHC and the Province of British Columbia (the Province), a minority owner, took several steps in response to the backlash:

- Recreational use by the public was permitted on the property;
- RSTBC was assigned to manage recreational values the lands on behalf of the land owners;
- CMHC and the Province made a commitment to meaningful engagement with local First Nations before any management decisions or future development on the site, and
- In 2018, the North Shore Mountain Bike Association (NSMBA) received authorization to perform maintenance work on existing trails.

Figure 1. Major North Shore Parks and Protected Spaces

These events showed a disconnect between the land managers and the public, highlighting the need for a comprehensive recreation-focused planning process for the CMHC lands. A management plan will be used by RSTBC to inform decisions on the potential for legal establishment of recreation trails and subsequent implementation of regulations governing their use. Also contributing to the need for a management plan is the intense recreation pressure facing the CMHC lands and other trail networks on the North Shore, which may increase impacts to cultural heritage values, user conflicts and environmental impacts if left unmanaged. The region's growing population and the increasing popularity of outdoor recreation activities have increased demand on the local trail systems in recent years. Further underscoring the importance of trails and the need for planning are the health benefits of both exercise and nature, as well as the role of trails in the local economy, culture, and identity.

Sidebar: Benefits of Trails

Health Benefits

Trails provide an opportunity for people to improve and maintain their physical and mental well-being through exercise and exposure to nature. Physical activity has numerous benefits, including improving cardiovascular fitness, strength, and can alleviate stress. Access to trails encourages physical activity.¹ Similarly, spending time in nature is broadly beneficial for the health of humans at all ages.² Outdoor recreation opportunities have been a significant source of safe, outdoor activity for social connections, physical and mental health through the COVID-19 pandemic. It is expected that a large portion of new users will continue to access the health benefits of recreation trails even after the pandemic ends.

Community Benefits

Trails provide opportunities for people to engage with their community by interacting with their neighbours on the trails and/or participating in events such as trail maintenance days, races, and groups rides/runs/walks.

Economic Benefits

Trails support the local economy through tourism, local businesses, and attracting and retaining residents to nearby areas. A 2016 study attributed over \$2 million in visitor spending from mountain biking on the North Shore over just one summer season.³

² (Park Prescriptions n.d.)

³ (Western Canada Mountain Bike Tourism Association 2016)

Sidebar: The Blair Rifle Range Lands

The CMHC lands were formerly part of the Blair Rifle Range, a Canadian Armed Forces training site owned by the Department of National Defence (DND) and active from the 1930s to 1960s.⁴ Directly to the south of the CMHC lands is the parcel of land that was home to the main firing ranges,⁵ which retains DND involvement. Both sites are part of the DND's Unexploded Explosive Ordnance (UXO) Legacy Site Program, which manages inactive sites where UXOs may be present. In 2018, the program undertook a series of site surveys that identified a number of UXOs while confirming that the trails in the area are safe for community use.⁶ There are still concerns about off-trail areas however, and DND signage on site warns users about UXO risks.

We heard through the engagement process that the area is of significant interest to many in adjacent neighbourhoods, and that development there could impact the trail network. If development plans are put forward at some point in the future, RSTBC and CMHC should work with the proponents to improve access to the CMHC trails. Nevertheless, the scope of this report is limited to recreation access to the CMHC lands and does not include the future of the DND lands, which are owned by a different agency and are zoned for residential use by the District of North Vancouver.

Figure 2. UXO warning sign in the CMHC lands.

⁶ (Government of Canada 2018)

Goals and Methodology

This Recreation Access Management Plan (RAMP) aims to bring the trail network into a cohesive and well-managed trail system. Key objectives of the RAMP are to:

- Establish management zones;
- Describe and classify existing trails;
- Establish a framework for monitoring and future decision making, and
- Establish management actions for wayfinding, user conflict management, environmental protection, communication, partnerships and collaboration.

A four-part data gathering process has been undertaken in order to capture the area's full range of recreational, environmental, and Indigenous values. This process includes:

- Government to government Indigenous consultation between the Province and First Nations;
- Stakeholder interviews with neighbouring land managers, local user groups, and community associations;
- A public online survey, and
- Desktop and field reviews of the trail network, environmental data, and relevant policy documents.

1.1.1 LEGISLATIVE FRAMEWORK

RSTBC derives its legislative authority from the Forest & Range Practices Act (FRPA). FRPA identifies and protects resource values on public lands in B.C., such as biodiversity, timber, and recreation. While FRPA is designed primarily for the working forest, several sections are relevant to the CMHC lands:

Section 57

Section 57 enables the Minister to *authorize* the construction and/or maintenance of trails and recreation facilities. This is the mechanism through which the NSMBA is currently authorized to perform maintenance work on most trails in the CMHC lands. Authorization for trail work does not grant a trail protection from other land uses.

Section 56

Section 56 enables the Minister to legally *establish* recreation trails, either as individual recreation trail corridors, or as part of a trail-based recreation area or recreation site. Establishment gives trails greater standing in the eyes of the Province and provides some degree of protection from other land uses. Section 56 allows RSTBC to enter volunteer partnership agreements with trail maintenance organizations and to provide third party liability insurance to agreement holders. Legal establishment also allows application of the Forest Recreation Regulation which enables the creation of enforceable rules, such as hiking-only routes, or descent-only trails. Section 57 authorization is still required for new trail construction in an established recreation area or site.

Section 118

Section 118 allows RSTBC to enter into Partnership Agreements with user groups and public agencies for trail maintenance on established trails, areas, or sites.

1.1.2 STRATEGIC CONTEXT

Indigenous Interests

The CMHC lands are Crown lands for the purposes of administration and application. This means that according to the Constitution Act of Canada, the crown has a duty to consult First Nations who have expressed interest in the lands. In 2019 the British Columbia government enacted the *Declaration on the Rights of Indigenous Peoples Act* (DRIPA). DRIPA was developed as part of a reconciliation strategy that government has undertaken. Reconciliation with First Nations requires governments to do more than meet the duty to consult as described in the Constitution Act. In the case of the CMHC lands, government to government discussions have been initiated external to the RAMP process. These discussions may have either direct or indirect influence over the strategic context of recreation management as they evolve.

Provincial Trail Strategy for B.C.

The Trails Strategy for B.C. sets out a vision and guiding principles for recreation trails in B.C., as well as a series of actions for the Province to take to work towards achieving the vision. The vision for trails in B.C. is for “A world-renowned, sustainable network of trails, with opportunities for all, which provides benefits for trails users, communities and the province.”⁷ Many of the 22 Actions called for in the Strategy can be reflected in this RAMP, including:

- Action #1: Integrate a framework of environmental considerations, actions and standards into planning, construction and management of the provincial trail network.
- Action #2: Enhance environmental awareness and appreciation through education and interpretation.
- Action #3: Collaboratively develop local, regional and provincial trail system plans that secure opportunities for all trail users in balance with environmental, cultural and social values.
- Action #4: Engage First Nations in collaborative trail planning.
- Action #5: Engage landowners, tenured resource users and other stakeholders in collaborative trail planning.
- Action #7: Use legislative tools to approve trails, and identify trail uses, in support of a comprehensive trail network.

E-Bike Policy

The RSTBC Electric Bicycles (e-bikes) Policy recognizes e-bikes as an allowable activity on recreation trails, where appropriate, and clarifies when and where different classes of e-bikes are appropriate. The Policy

⁷ (Province of British Columbia 2013)

also recognizes that the impacts of e-bikes are still emerging, and it commits RSTBC to monitoring its effectiveness and making adjustments, if necessary.⁸

Mountain Bike Policy

At the time of writing, the RSTBC Mountain Bike Trail Policy is a draft. Once adopted, it will replace the 2013 Authorizing Recreational Mountain Bike Trails on Provincial Crown Land policy. The forthcoming policy provides guidance on the development, maintenance, and management of mountain bike trails in B.C.

Whistler Trail Standards

Whistler Trail Standards (WTS) have been used as a difficulty rating system and construction standard across BC for nearly 20 years. RSTBC has begun a process to modernize the WTS. At this time the WTS remains the standard but it may be replaced in future.

LSCR Trails Strategic Plan

The LSCR is adjacent to the CMHC lands and several trails cross the between the two jurisdictions. The LSCR Trails Strategic Plan makes a recommendation for collaborating with FLNRORD as part of the ongoing management of the LSCR.⁹ Because of the connections between the two areas, there is potential for the LSCR and RSTBC to collaborate on the former's goal of developing a cohesive trail network to serve a growing number of recreational users.

Other Adjacent Land Management Plans

There may be future plans and policies for adjacent Mt. Seymour lands managed by BC Parks and the DNV that should be considered in potential updates to the RAMP.

Limits of Acceptable Change Framework

The BC Ministry of Forests Recreation Manual promotes the use the limits of acceptable change (LAC) concept to assess the environmental and social conditions of a trail.¹⁰ The LAC approach to assessment asks "How much change is acceptable?", and considers the ability of management strategies, maintenance levels, and trail design to influence the impacts of trail use. This approach differs from carrying capacity, which asks "How much use is acceptable?".

⁸ (Recreation Sites and Trails BC 2019)

⁹ (Metro Vancouver 2018)

¹⁰ (British Columbia Ministry of Forests 2001)

1.1.3 INDIGENOUS VALUES

The CMHC lands are located within traditional, unceded First Nations' territory. The Province is actively engaged in consultation with the Musqueam, Seabird Island Band, Shxw'ow'hamel, Squamish, Stó:lō / People of the River and Tsleil-Waututh. The Province is legally obligated to consult and accommodate First Nations, where required, on land and resource decisions that could impact their Indigenous interests¹¹. The Trails Strategy for BC also highlights how sustainable trails includes engagement with First Nations in collaborative trail planning.¹²

The CMHC lands are Crown lands and have potential for environmental, cultural, and social significance to First Nations, so RSTBC has undertaken consultation with six First Nations as part of this Recreation Access Management Plan. Prior to the commencement of the project, RSTBC signed a memorandum of understanding with the Tsleil-Waututh Nation committing to no new trail development on the lands. RSTBC has undertaken government to government discussions with First Nations who have expressed interest in the CMHC lands. These discussions will inform management direction moving forward and are undertaken in the spirit of reconciliation.

“Our purpose is protecting our nation’s land and resources and ensuring the Tsleil-Waututh Nation voice is always heard. We investigate archaeological sites on our reserve; assess referrals in our territory; build mutually beneficial partnerships with other First Nations, governments, and the private sector; and facilitate treaty negotiations.”¹³

Engagement has been on a government-to-government level through the referral process of the Tsleil-waututh Nation. The Tsleil-waututh Nation examines referrals that may affect Tsleil-waututh interests, rights, and title. The Tsleil-waututh have occupied the area since time immemorial and evidence of this is found across the landscape in artifacts, cultural use areas, habitation sites, hunting and gathering locations, and sacred spaces. In the CMHC lands, there is potential for trail building and maintenance or recreation activities to unearth artifacts, affect the potential for hunting and gathering, or impact the use of sacred spaces, if they exist. At the time of writing, there are no formally recorded archaeological sites recorded in the CMHC lands in the Province’s Remote Access to Archaeological Data (RAAD) database. There may also be other interests that emerge through ongoing engagement.

¹¹ (Province of British Columbia 2022)

¹² (Province of British Columbia, 2013)

¹³ (Tsleil-Waututh Nation 2021)

1.2 WHERE WE ARE NOW

1.2.1 THE TRAIL NETWORK

Trails

The CMHC lands have a network of nearly 24 km of trail extending throughout the site, with the highest concentrations on two ridges west of McCartney Creek.

Despite the small size of the CMHC lands relative to other forested recreation areas on Mt. Seymour, the area features over 40 named trails (see fig. 3). Bridle Path and Mushroom Trail are multi-use arterials that traverse the site and continue on through neighbouring jurisdictions. The Baden Powell Trail stretches across the entire North Shore. Within the CMHC lands it includes a narrow, sometimes steep and technical, hiking-only section, and broad, smooth multi-use traverse.

Many trails in the area were created or have been adopted by mountain bikers. These include descending trails like Severed D, John Deer, and Boogieman, climbing trails like R&R, Penny Lane, and Good Sir Martin, as well as cross-country style trails like Sticks and Stones and Salamander. While these trails include numerous technical trail features (TTFs) designed for mountain biking, and are maintained largely by mountain bikers, most are also used by hikers and trail runners.

Rounding out the network are a number of connecting trails, such as Water Towers Access and Hill Drive Access, that provide entry points into the trail system from the Blueridge neighbourhood. Blair Range Trail appears to be an abandoned access road associated with the former rifle range.

Maintenance

Most trails in the CMHC lands are maintained by the NSMBA under Section 57 authorization from RSTBC. The NSMBA maintenance program consists of trail stewardship by individual Builders, public Trail Days, and corporate sponsorship through the Trail Adoption Plan (TAP) program. Maintenance levels vary, but most trails see regular maintenance by the highly engaged volunteer network. Hiking-only trails are currently a gap in the maintenance coverage.

Condition

A detailed assessment of trail conditions was completed by Hedberg and Associates in 2019. High priority issues identified in assessment included the condition and structural integrity of a number of wooden TTFs. Stakeholders reported that trail conditions were generally good, but raised concerns about the condition of the hiking-only section of the Baden Powell, which lacks a maintenance partner, as well as the high-traffic John Deer trail.

Access

There is little direct access to the CMHC lands by road, but trail users are able to gain access from adjacent properties managed by BC Parks, Metro Vancouver, and the District of North Vancouver (see fig. 4). Old Buck and Berkley/Hyannis trailheads are the most popular trailheads overall and with

mountain bikers. Berkley/Hyannis and other trailheads with the Blueridge neighbourhood are the most used by walkers/hikers and dog walkers. Mushroom Parking Lot and the Old Buck Parking Lot are used by mountain bikers for shuttle runs.

Figure 4. CMHC lands access points.

Amenities

Very limited amenities exist to support the trail network in the CMHC lands. Users have created signage at a number of trailheads to aid navigation, but it is not official and comprehensive. There is a kiosk in good condition at the intersection of Baden Powell and Bridle Path, but its map is out of date. Because access to the CMHC lands often involves beginning in another jurisdiction, most users are served by off-site kiosks, dog-waste receptacles, and parking.

1.2.2 ECOSYSTEMS

The CMHC lands are part of a much larger system of connected ecosystems and conservation areas including regional watersheds, regional parks, provincial parks, and municipal parks. The site's primary ecological value is as part of the broader connected habitats on Seymour Mountain. The forests are second growth mature coniferous forests (80-250 yrs old), as shown in fig. 5: Metro Vancouver Sensitive Ecosystems. There are no known Species at Risk within the property, based on a search of the BC Conservation Data Centre (see fig. 6: BC CDC Search Results Fall 2021). The entirety of the CMHC lands are contained within the Coastal Western Hemlock dry maritime (CWHdm) subzone according to the provincial Biogeoclimatic Ecological Classification system.

The Water Sustainability Act protects streams and other bodies of water, which may affect the existing or future trails that intersect streams and riparian areas. There are several small creeks that flow south, eventually connecting to Burrard Inlet. The riparian areas for these creeks are important for maintaining good water quality for downstream aquatic organisms. The North Shore Stream Keepers highlighted the importance of the McCartney Creek area. The creek is salmon-bearing and flows into the Maplewood Flats Conservation Area. It is a rare undeveloped corridor between the Burrard Inlet and Mt. Seymour used by fish and wildlife.

Two trails that may require improvements and modifications to reduce impacts to streams and riparian areas were the Baden-Powell Trail and the Blair Range Trail. These were identified through stakeholder feedback, field observations and desktop site review. Approximately 450 meters of the Baden-Powell Trail are within the riparian area of McCartney Creek, and the Blair Range Trail has portions that are essentially road alignments that were built without a proper culvert or bridge across McCartney Creek and its tributaries.

Another prevalent environmental impact is people walking their dogs, particularly when they are off-leash and allowed to leave the trails. The commonly cited environmental impacts of dogs include disturbance, chasing, or predation of wildlife, disturbance of stream banks and sediments within creeks, and trampling of vegetation. The presence of dogs, either on or off-leash can decrease the number of birds and the species richness of an ecosystem.¹⁴

Mt. Seymour is black bear habitat, and there is potential for bear-human encounters on trails in the CMHC lands. The North Shore Black Society described the area as home to vulnerable black bears, while dominant bears live further from human activity. Vulnerable bears may have limited options to avoid humans and dogs on trails.

¹⁴ (Protect Nature TO 2016)

2 COMMUNITY ENGAGEMENT

2.1 WHAT WE DID

Over the course of the project, stakeholders and the public were provided opportunities to provide input on:

- How they use the current trail network
- What they value about the current trail system
- Barriers and areas of conflict
- Key priorities for the future
- Opportunities for collaboration and partnership

The engagement program included two rounds of engagement. Stakeholders were identified by RSTBC staff and the consulting team. The key stakeholders for this project were adjacent land managers and user groups who would be most directly affected.

2.1.1 ROUND 1 ENGAGEMENT

The purpose of Round 1 was to:

- Inform stakeholders and the public about project;
- Establish communication channels with trail user groups and local residents, and
- Gather data on how people use the trail system, what they value most, and where improvements are needed

Engagement activities in Round 1 included:

- 6 stakeholder interviews
- 1 stakeholder workshop
- Public online survey

Stakeholder Interviews

Six stakeholder organizations were invited to interviews with the consulting team and RSTBC staff. The interviews included a brief presentation of the project background and a discussion of the opportunities and challenges of the trail network.

- Lower Seymour Conservation Reserve – Metro Vancouver (LSCR)
- District of North Vancouver (DNV)
- BC Parks
- Metro Vancouver Parks
- North Shore Mountain Bike Association (NSMBA)
- Blueridge Community Association

Stakeholder Workshop

An online workshop was held with user groups and other interested stakeholders. The format was similar to the interviews, with a presentation of the project background and a facilitated discussion of specific questions about the value of the CMHC lands, how people use the site currently, and opportunities and priorities for the future. Those who participated included representatives from:

- North Shore Ride
- Greater Vancouver Orienteering Club
- Colour the Trails
- North Shore Trail Runners Alliance
- North Shore Black Bear Society
- Vancouver Mycological Society

Public Online Survey

A public online survey was hosted on govTogetherBC from September 22, 2021 to October 31, 2021. The survey was promoted by stakeholder organizations and on-site signage, and received 1702 responses. Survey responses are summarized in Section 2.2.3, and the full results can be found in Appendix A.

2.1.2 ROUND 2 ENGAGEMENT

Round 2 engagement (IN PROGRESS) included follow-up with stakeholders to:

- Communicate the highlights of the Draft Plan to stakeholders;
- Gather feedback on key recommendations and priorities, and
- Gather feedback on potential partnerships and contributions.

Engagement activities in Round 2 included X stakeholder meetings. The Draft Plan was also sent to X stakeholders with an invitation to provide written comments.

Upon completion, the Final Recreation Access Management Plan will be sent to stakeholders who participated in the process. RSTBC will also be actively continuing to coordinate and collaborate with partners in the implementation of the Plan.

2.2 ENGAGEMENT RESULTS

2.2.1 WHAT WE HEARD

Across the various engagement activities, the following key themes emerged:

- The trail system is highly valued by all users for providing opportunities for exercise, recreation, and access to nature.
- Users are committed, frequent users of the trails, often going at least weekly.
- Mountain bikers are the largest user group, but the area is also important for hikers, trail runners, dog walkers, and orienteering.
- The trails are a destination for mountain bikers across the North Shore, Metro Vancouver, and beyond, and are an important neighbourhood resource for mountain biking, walking/hiking, and dog walking.
- Users love the network and do not want to see too much change, but several aspects could be better managed, including:
 - Conflicts between off-leash/poorly trained dogs and other users;
 - Conflicts between mountain bikers on descending trails and other users;
 - Education about good trail etiquette;
 - Signage and wayfinding;
 - Parking and access;
 - Collaboration among land managers;
 - Support for user-group led maintenance;
 - Providing more trail experiences for all levels of ability

2.2.2 STAKEHOLDER WORKSHOP AND INTERVIEW RESULTS

The following is a summary of what we heard at the workshop and interviews. The North Shore Streamkeepers also submitted written comments which have been incorporated.

The value and importance of the CMHC lands:

- Opportunity for exercise, access to nature, solitude, and mental health benefits.
- The trail network and area provide opportunities different activities – mountain biking, trail running, orienteering, e.g.
- The network provides opportunities for many different loops, including opportunities to gain elevation or not.
- The trails provide connections to a larger network of trails across Mt. Seymour.
- The CMHC trails are some of the most popular on Mt. Seymour.

- Trails have a natural/narrow/backcountry quality.
- The area provides food, shelter, and routes for vulnerable bears and other wildlife.
- The area is part of a wildlife corridor that connects Mt. Seymour with Maplewood Flats.
- The area is the headwaters of the salmonoid-bearing McCartney Creek.
- User groups/NSMBA maintenance of trails.
- Already enough trails for users.
- Historical value of the Blair Rifle Range for its military uses and social-political history.
- Off-leash dog walking opportunities.
- Users strongly value the trails and some even chose their home based on access to the trails.

Opportunities for improvement:

- Reducing impacts of trail use and development on fish and wildlife.
- Signage for wayfinding and guidance on trail and wildlife etiquette, and on the DND lands.
- Clarifying etiquette such as yield hierarchy.
- Permanent markers for orienteering.
- More opportunities for expert-level mountain biking.
- More opportunities for beginner-level mountain biking in low-elevation areas.
- Better connections between trails.
- Reducing armouring on multi-use trails.
- Potential to separate or prioritize user types in some areas – downhill mountain bike routes, hiking routes, on-leash trails, e.g.
- Management of eMTBs on multiuse trails and descending mountain bike trails.
- Better management of parking and increasing trail use.
- Facilities to support trail users, such as staging areas.
- Reducing the impacts of the trail system on adjacent neighbourhood.
- Consistent maintenance, especially on Baden Powell.
- Crowding on low-elevation trails.
- Better east-west connections between Blueridge and Parkgate.
- Maintenance and stewardship from additional user groups.
- Better communication with public and volunteers.
- Better communication and collaboration between land managers.
- Clear management direction from all land managers.
- Responding to rogue trail building. Some user groups feel more authorized expert-level options would reduce unauthorized building.

Overall vision for the future:

- A multiuse area where users can enjoy the outdoors.
- Continued stakeholder input with many different voices.
- Respect for wildlife and habitat in planning and development.
- Protection in perpetuity as a forested recreation area.
- Cooperation with neighbouring land managers.
- A cohesive trail network with well-maintained trails.

2.2.3 PUBLIC ONLINE SURVEY RESULTS

Who took the survey?

- There were 1,702 responses to the public online survey.
- **Most respondents were from North Vancouver** (19% Blueridge/Seymour Heights; 41% other areas of the City/District) or Metro Vancouver (34%).
- **The largest age group of respondents was 41-60 years old** (46%), followed by 25-40 (38%), 60+ (9%), and 16-24 (4%).
- **More men responded than women** (70% vs 28%).

What activities do people do on the trails?

- **The majority of respondents identified the most with all mountain/enduro mountain biking** (64%), followed by walking/hiking (9%), trail running (6%), non-commercial dog walking/hiking (6%), downhill/shuttle mountain biking (5%), and cross-country mountain biking (4%). Two percent or fewer of respondents identified the most with eMTB, orienteering, nature appreciation/bird watching/wildlife viewing, gravel biking, horseback riding, commercial dog walking, wheelchair accessible trail activities, and trail maintenance.
- **Respondents from all areas were most likely to identify most with mountain biking.** A significant minority of respondents from Blueridge/Seymour Heights identified most with walking/hiking (23%) or non-commercial dog walking/hiking (20%), compared with all mountain/enduro mountain biking (42%).
- **Many individuals participate in more than one activity in the CMHC lands.** Ninety percent of respondents use the trails for walking/hiking at least once a year, and 83% of respondents go mountain/enduro mountain biking at least once a year.
 - *“Dog walking/running & Trail running, mountain biking xc, gravel riding. All part of our daily lifestyle! Hard to pick just one!!”*

- **Respondents are regular trail users.** Among those who identify most strongly with all mountain/enduro mountain biking, 65% go weekly, 18% go monthly, and 14% go daily. Among those who identify most strongly with all walking/hiking, 42% go weekly, 21% go monthly, and 18% go daily.

Why do people use the trails?

- **Exercise, recreational use, and being close to nature were the three most important reasons for respondents to use the trails.** Doing an activity with friends/family and adventure/challenge were also very important reasons for the majority of respondents. Experiencing solitude/relaxing and getting to other trails were less important than the other options, but still rated very important or important for the majority of respondents.
- **A small number of respondents operate commercial/institutional activities in the CMHC lands,** including mountain bike camps (12), guided mountain bike rides (9), dog walking (4), outdoor education (4), and summer camps (4).

How do people access the trails?

- **The most common entry points for respondents were the Old Buck trailhead (67%) and Berkley/Hyannis trailheads (59%),** followed by Mushroom Parking Lot (27%), minor trailheads in Bluebridge (e.g., Hill Drive Access or Blair Range Trail) (24%), and the Baden Powell Parking Lot (12%)(see figure ##). Berkley/Hyannis and other Bluebridge trailheads were the most used by respondents who identified most with walking/hiking and dog walking/hiking. Mushroom Parking Lot and Old Buck were the most popular for respondents who identify most with downhill/shuttle mountain biking. Respondents also enter the network from the LSCR via the Seymour Suspension Bridge and Pipeline Bridge/Riverside Dr, the DND lands, and high elevation parking lots on Mt. Seymour.

Favourite trails

- **Favourite trails varied by the activity:**
 - All mountain/enduro mountain biking: John Deer, Good Sir Martin, Severed, Asian Adonis, and Boogieman
 - Walking/hiking: Baden Powell and Bridal Path
 - Trail running: Baden Powell, Bridal Path, and Good Sir Martin
 - Dog walking/hiking (personal): Baden Powell, Bridal Path, and Blair Range Trail
- The only trail to appear in the cluster of most favoured trails for both wheeled and non-wheeled users was Good Sir Martin: a trail that mountain bikers use to ascend that is a favourite of mountain bikers and trail runners.

What keeps people from using the trails more?

- The most common reasons keeping respondents from using the trails more are a lack of time (47%) or nothing. Respondents also reported a lack of parking (16%), trails being too crowded (14%), a lack of desirable routes (10%), trails being too easy (10%), trail maintenance (7%), trails being confusing/difficult to navigate (6%), conflicts with other users (4%), and trails being too challenging (3%).
- Less than 1.5% of respondents reported that safety concerns kept them from using the trails more often. Among those that did, conflicts with mountain bikers, poor trail conditions, not feeling safe alone, and off-leash dogs were the top concerns.
 - *"Bikes try to be aware of us, but sometimes they come 'upon us' on a curve or hill. Makes me quite nervous of getting hit."*

Conflicts

- **The majority of respondents reported never having conflicts with other users.** Never having conflicts with equestrians was the most common (92%), followed by mountain bikers (78%), walkers/hikers (71%), and dog walkers (60%)
 - *"Other trail users are courteous with the 'rules of the road' - i.e. keep to left/right, allow to pass, bikers announce themselves from behind. I feel its common knowledge that the trails are for everyone, and that they are shared. If you go early in the day, you can avoid heavier traffic as well as weekdays vs weekends. The majority I come across are polite and courteous."*
 - *"I have encountered a few very rare conflicts (so closer to 'never' than to 'sometimes'). I have seen off leash dogs in the way, hikers or trail runners not paying attention, and mountain bikers unaware of how they might surprise other users but all of these instances are very very rare."*
 - *"As a mountain biker I try to give right of passage most time to walker/hikers but they always stop which I find very pleasant. I always say hi to other trails users and they reply back with a smile."*
 - *"I always ride, run or hike with an open mind and treat everyone with respect"*
 - *"Overwhelmingly, I find people of all user-groups respectful of each other and friendly. As a mountain biker, I put extra effort in to yield to other user groups and to say hello."*
 - *"Conflicts are fairly rare but not to say this isn't an important area to consider."*
- The most frequently described conflicts involved off-leash or poorly trained dogs.
 - *" Mostly no conflict. Dog walkers who cannot control their animal or do not pick up after it are really the only issue."*

- Conflicts between mountain bikers and hikers on trails that mountain bikers descend, and poor etiquette were also described.
 - *"I often trail run with my dog, who I will keep on leash when there's mountain bikers. Most bikers are quite good and I stay off the trails that they are descending down as much as possible, but it can be frustrating on a weekend when the trails are full of bikers. I often go to other trails where biking is limited or there's more signage to indicate the paths and the direction (like Mt Fromme)."*
 - *"They say if you don't see the a**hole in the room, it's probably you. As a mountain biker I can see that being the case. We are the most disruptive trail users when it comes to our interactions with others. I don't considering having to slow down to avoid a collision a "conflict", just something to be expected on a multi-use network. Dangerous situations on high speed trails can be avoided with proper signage and education on trail etiquette."*

Signage and wayfinding

- **Most respondents (63%) think there is sufficient on-site signage to navigate the trail system.** This trend is most pronounced among respondents who identify most with trail running (66%) and mountain biking (all mountain/enduro: 65%), and least pronounced among those that identify most with walking/hiking.
- Nevertheless, 57% of respondents indicated directional signage needs to be improved, compared to 27% for regulatory signage and 24% for informational signage.

Guiding principles

- **All the guiding principles received broad support.** The most supported principles were "Benefits for our community (social, health and well-being, economic, etc.)" and "Environmental and cultural stewardship."
- Respondents also wrote-in support for respecting the efforts of volunteers, recognising the history of mountain biking in the area, ensuring the network caters to a range of skills from beginners to advanced and users of all ages, respecting the rights of non-residents and residents, establishing shared rules, and collaborating with First Nations.
 - *"The trails are a valuable asset that should be available to all users."*
 - *"Trail access is equally important for my physical and mental health and I would think that many other users feel the same - whether they be hikers, walkers, dog walkers, trail runners, cyclists."*
 - *"I am super concerned that the "community" definition above might be limited to just the homeowners near the trails. Many of us can't afford to live there and have to drive from further out to access them. Our voices should count too!"*

- *“Connection to the initial spirit and roots of the mountain bike trails. This involves preserving original trail features to the extent that is reasonable and maintaining the sense of adventure and challenge inherent in the trail network.”*
- *“Build on the legacy of the North Shore mountain biking, but incorporate principles of all ages, all abilities for new trails.”*
- *“We should prioritize accessibility for people to use the trails for outdoors activities, which promotes a healthy lifestyle for all ages. it is very frustrating when you're trying to spend your day doing a healthy activity in nature and you aren't able to because they're aren't enough trails, no parking, or trails are not maintained.”*

Priorities

- “Improve existing trails” was the highest ranked priority for the CMHC trail network, followed by “add new trails” and “improve connections and loop options.” “Add new trails” received the most #1 rankings.

3 ACTION PLAN

1. MANAGEMENT

1.1. Establish the CMHC lands as a non-motorized Trail-Based Recreation Area¹⁵ under Section 56 of FRPA.

All the data, information, and engagement input reviewed for the RAMP points to the need to establish the trail system so that it can be managed and protected. Stakeholder feedback, the public survey, and fieldwork all made clear that many people value the CMHC lands for recreation. Over 40 named trails are located in the area, and they are widely and intensively used for hiking, trail running, and mountain biking, among other activities.

Further, trails in the CMHC lands are part of a larger network of trails on Mt. Seymour spread across Metro Vancouver, District of North Vancouver (DNV), and BC Parks lands. Numerous trails cross jurisdictional boundaries, and without the CMHC trails there would be a significant loss of connectivity and access.

The CMHC lands are located within an urban district and bordered by residential neighbourhoods and parklands. They are not a working forest like most RSTBC managed sites. The CMHC lands are zoned as *Park, Recreation, and Open Space*, as are the DNV-owned lands directly to the west and east. Both the Lower Seymour Conservation Reserve (LSCR) and Mt. Seymour Provincial Park are protected areas managed for ecological and recreational values. The CMHC lands should be managed similarly to protect the environmental and recreational values of Mt. Seymour from fragmentation.

Another benefit of establishment is that it would enable regulations to be enacted. Despite the popularity of the CMHC trails, their use is currently unregulated. In the absence of a local land manager, user groups have taken initiative to install signs indicating trail names and guidelines for use, but this signage is only on select trails, is not well understood by all user groups, and there is no mechanism for enforcing the suggested trail uses. With trail-based activities growing in popularity, it is imperative that a comprehensive system of signage and regulations be put in place to ensure public safety, and protect recreation and environmental values.

There are three options for establishment under Section 56 of FRPA: as a series of linear corridors for each trail, as a *Recreation Site* polygon, or as a *Trail-Based Recreation Area*. For the CMHC lands,

¹⁵ *Trail-Based Recreation Area* is a forthcoming designation introduced by *Bill 23 – 2021: Forest Statutes Amendments Act, 2021*. As of January, 2022, the Bill has passed first reading.
<https://www.leg.bc.ca/parliamentary-business/legislation-debates-proceedings/42nd-parliament/2nd-session/bills/first-reading/gov23-1>

establishing an area rather than a series of linear corridors is preferred given the number and density of trails throughout the entirety of the site. The linear corridor approach is useful in working forests with a low density of trails so that opportunities for resource extraction in between trails. In the CMHC lands, the high density of trails means that the areas left over by a linear corridor approach would be highly fragmented and unsuitable for other uses. The *Trail-Based Recreation Area* designation also reflects the lands' park-like nature, its relatively uniformity, and its setting among other protected areas. The *Recreation Site* designation is used for campsites, which are not present in the CMHC lands.

Priority: High

Potential Partnerships: RSTBC, FLNRORD

Cost: Administrative

1.2. Assign primary, secondary, prohibited, and directional trail uses.

If the area is established as a Trail-Based Recreation Area, the next step should be to assign primary, secondary, prohibited, and directional uses to all trails. Trails in the CMHC lands are designed and used for hiking, mountain biking, or both, but there are no formal regulations around who can use what trail and how. Regulations around trail use are needed to help minimize user conflicts and reduce the risk of collisions.

Table 1 outlines the recommended user types and difficulty ratings for each trail. For trails that cross jurisdictional boundaries, recommended uses are consistent with the uses allowed by the neighbouring land manager. Difficulty ratings are based on the 2019 Hedberg assessments.¹⁶ In cases where a trail crosses jurisdictions, and the difficulty level of the trail is different than the Hedberg assessment, the higher rating is used. As discussed in Action 1.6, difficulty ratings should be reassessed when the forthcoming RSTBC Trail Difficulty Rating Matrix is finalized.

Trail use patterns are well established on site and stakeholders and survey respondents reported that user conflicts are rare. The recommendations largely reflect the way each trail is currently used and allow for multiple uses unless there is a compelling justification for restricting to a single use, such as a safety concern.

While conflicts are rare, they are present. The largest sources of conflict, according to survey respondents and stakeholders, are off-leash dogs and descending mountain bike trails. This report recommends leash-optional dog walking be limited to the Baden Powell and Powerlines Access trails. This is consistent with the regulations in the neighbouring DNV lands, and should help minimize

16

unwanted dog-human interactions. On-leash dog walking is recommended for every other trail the hiking and trail running are permitted.

Trails that have been designated descent-only, mountain bike-primary, such as John Deer and Severed, have been optimized for mountain bikers and include TTFs and other sections of trail that require mountain bikers to be committed to a particular “move” and momentarily unable to stop. Hikers and other non-MTB trail users are still permitted to use these trails, but the MTB-primary designation lets them know they should expect bikes heading downhill and yield to them. Mountain bikers are still expected to ride in control and slow down when passing others. Trails that feature jumps and enable higher speeds are designated mountain bike-only because of the risk of high-speed collisions.

Priority: High

Potential Partnerships: RSTBC, DNV, LSCR, NSMBA

Cost: Administrative

Trail Name	Difficulty Rating	Primary User	Permitted Users	Prohibited Users	Direction	Dog Walking	Jurisdictional Collaboration

Table 1. Trail difficulty ratings and designated users by trail.

1.3. Use management zones to guide planning across the site.

If the CMHC lands are established as a Trail-Based Recreation Site, management zones that reflect the way safety and environmental concerns vary across the parcel can be used to guide planning efforts. The proposed layout of management zones is driven by the presence of riparian areas and the site's history as a military rifle range. Three zones are proposed (see fig. 8), each suitable for different activities and needing specific management strategies:

- Forest recreation zone
 - Objective: provide opportunities for non-motorized recreation.
 - Recreation opportunities: non-motorized, on-and-off trail activities.
 - Facilities: recreation trails, signage, wayfinding, kiosks, and rest areas.
- Restricted recreation zone
 - Objective: manage the risk of unexploded explosive ordinances (UXO) from historic military activity.
 - Recreation opportunities: non-motorized, on-trail activities; no off-trail activities.
 - Facilities: recreation trails, signage, wayfinding, kiosks, and rest areas.
 - Special management considerations: This zone is informed by risk assessments conducted by DND's UXO Legacy Site program. The boundary between this zone and the Forest Recreation Zone aligns with the UXO warning signs installed by DND that instruct visitors to remain on trail. Work with DND to continue to maintain system of UXO warning signs.
- Riparian management zone
 - Objective: protect sensitive riparian ecosystems.
 - Recreation opportunities: non-motorized, on-trail activities.
 - Facilities: recreation trails (limited to essential stream crossings), signage, boardwalks, bridges, and fencing.
 - Special management considerations: Special care is needed to protect water quality and biodiversity in this zone from the impacts of existing and potential future trails. Action 4.4 outlines steps that can be taken to assess the impacts of current trails on riparian ecosystems. Future development in this zone should be kept to a minimum. If a new stream crossing is unavoidable, consult the draft RSTBC best management practices for working in riparian zones, which are included in Appendix B: Working with Water, and the BC Water Sustainability Act. Some stream crossing may require a Notification or Change Approval under the Act.

If adopted, the management zones should be shown on area maps.

Priority: High

Potential Partnerships: RSTBC, DND

Cost: Administrative

Figure 8. Proposed Management Zones

1.4. Consider applications for limited, non-exclusive, non-motorized commercial activities.

A number of commercial activities occur in the CMHC lands, including mountain bike camps, guided mountain bike rides, races, dog walking, outdoor education, and summer camps.

Commercial recreation activities on Crown lands in BC, such as the CMHC lands, require a commercial tenure from the BC Lands Branch under the Adventure Tourism Policy.¹⁷ The Lands Branch will refer applications to RSTBC for comment. When making recommendations to the Lands Branch, RSTBC should consider the following criteria:

- Activities do not interfere with public use of trails (exceptions may be made for a limited number of one-day recreation events).
- Activities are non-motorized.
- Tenures are non-exclusive.

Priority: Medium

Potential Partnerships: RSTBC, BC Lands Branch

Cost: Administrative

1.5. Minimize the impacts of eMTBs.

Stakeholders and survey respondents raised concerns about the potential for collisions involving eMTBs as the emerging sport grows more popular. High speeds on multi-use paths and eMTBs climbing descent trails were identified as the primary issues.

Concerns regarding e-bikes travelling uphill on downtracks are addressed by Action #1.2 through directional trail designations. Further action can be taken by:

- Applying the RSTBC e-bike policy and prohibiting class 2 and 3 e-bikes on CMHC trails. Permit Class 1 (no throttle) e-bikes on trails where mountain biking is permitted, and
- Working with stakeholders to reduce the potential speed differential between eMTBs and other trail users through trail design. Implement spot-improvements to minimize straight, obstacle-free sections of trail on multi-use singletrack such as Bridle Path.
- Educating users on the impacts of e-bikes and the increased levels of trail maintenance they can lead to.

Priority: Low

¹⁷ (Ministry of Forests, Lands and Natural Resources Operations 2015)

Potential Partnerships: RSTBC, NSMBA

Cost: \$

1.6. Update the inventory and assessment of existing trails using RSTBC's forthcoming BC Mountain Bike Trail Difficulty Rating Matrix.

Since the 2019 Hedberg & Associates assessment, RSTBC has released new trail standards as the BC Mountain Bike Trail Difficulty Rating Matrix and new TTFs have been constructed on trails such as Severed and Salvation. An updated inventory and assessment of the existing trails to confirm difficulty ratings and flag any safety concerns is needed. The inventory should include:

Assessment of all existing trails under the new standards to determine appropriate difficulty ratings under the new standards.

Assessment of TTFs for safety considerations, including fall zone hazards, structural integrity, condition, and risk management.

Confirm that high priority safety issues identified in 2019 have been addressed.

Refer to RSTBC Partnership Agreement Schedule F: Operational Standards for Mountain Bike Trails for more information.

Priority: High

Potential Partnerships: RSTBC, NSMBA

Cost: \$-\$\$

2. PARTNERSHIPS AND COLLABORATION

1.7. Establish and maintain a highly collaborative relationship with stakeholders and neighbouring land managers.

Given the many trails and trail experiences on the North Shore that cross multiple jurisdictions and the high levels of stakeholder interest and investment in the trail networks, it is crucial that RSTBC continues to work towards establishing and maintaining collaborative working relationships with stakeholders and neighbouring land managers to support ongoing management efforts.

Collaboration is needed on issues that apply across boundaries, such as proliferation of standards, inconsistent signage, and the need for public education and outreach. By sharing successes and challenges the Committee could identify effective solutions and mitigate some of the issues associated with a patchwork of land managers. Key topics for collaboration could include:

Creating **comprehensive trail maps**, including a map for the entire North Shore and maps for individual mountains. Maps should illustrate the trails in all jurisdictions to help users that navigate across boundaries.

Ensuring constancy across **signage standards** throughout the North Shore in terms of the type of information displayed and its legibility.

Harmonizing **trail etiquette** messaging. Stakeholders expressed a desire for more clarity on yield hierarchy and other matters of trail etiquette. The oft-cited IMBA yield triangle is a good start, but does not capture situations such as MTB-primary trails, eMTBs, and dogwalking.

Sharing **best practices for sustainable trails**. Individually, land managers and stakeholders have done excellent work adapting sustainable trail building practices to Coastal Hemlock forests and local building traditions. There is an opportunity to share lessons learned from challenging projects and environmental assessments.

Addressing **parking and access issues**. Managing the demand for trail opportunities and protecting adjacent neighbourhoods from impacts is a significant and complex challenge. With all trends in demographics and recreation pointing towards further increasing demand for North Shore trails, action and greater collaboration are needed on these issues.

Developing **cohesive trail networks**. Many hikes, rides, and runs start in one jurisdiction and travel through or end in another, as exemplified by the Baden Powell Trail, Triple Crown routes, and many loops on Seymour. Collaboration is needed to enhance and refine these connections, to create more coherent trail systems overall, and to ensure that terrain and user experience dictate the trail alignments.

Planning **wildfire** prevention and response strategies.

Priority: Medium

Potential Partnerships: RSTBC, DNV, LSCR, Metro, BC Parks, District of West Vancouver (DWV), NSMBA and other user groups

Cost: Administrative

1.8. Enter into Partnership Agreements for the maintenance of trails in the CMHC lands.

Most trails in the CMHC lands are currently maintained by the NSMBA through a Section 57 authorization. A small number of trails have no maintenance authorization and appear to be largely unmaintained. Once the network has been established under Section 56, pursue Section 118 Agreements for trail maintenance to ensure that all trails have an organization that is responsible for their maintenance. Table 2 shows potential partners for each trail.

Priority: High

Potential Partnerships: RSTBC, LSCR, NSMBA

Cost: Administrative

<i>Trail Name</i>	<i>Potential Maintenance Partners</i>
Academy Climb	NSMBA

Table 2. Potential maintenance partners.

1.9. Support user-group volunteers to enable higher levels of maintenance.

Continue to support volunteer trail maintenance, including NSMBA-led trail maintenance and programs such as Trail Days and the Trail Adoption Plan. Stakeholders and members of the public expressed tremendous appreciation for the efforts of volunteer trail builders and maintainers. However, stakeholders also expressed the need for increased levels of maintenance, particularly on popular trails such as Baden Powell and John Deer. Support of volunteer maintenance efforts through the financial contributions enable by Partnership Agreements. Work with stakeholders for opportunities to provide additional support when possible through in-kind material contributions, and/or staff and technical support.

Priority: Medium

Potential Partnerships: RSTBC, CMHC, NSMBA

Cost: \$

3. USER EXPERIENCE & COHESIVE TRAIL NETWORK

2.1. Implement a comprehensive signage and wayfinding system.

Many stakeholders reported the need for clearer and more comprehensive signage to navigate the trail system and inform users about rules and etiquette.

Signage and wayfinding are crucial aspects of any trail network as they provide important information to trail users about route options and yield hierarchy, make rules and etiquette explicit, and add to the safety and enjoyment of the trail experience. A clear and legible signage and wayfinding system helps ensure that residents and visitors use the trail network safely and appropriately. Trail signage is also a low-cost management strategy that can help reduce maintenance requirements over time and mitigate human impact on sensitive natural environments. A number of signage types are required, including:

Trailhead Signs

Use the forthcoming RSTBC signage tool to develop trailhead signage for all trailheads and intersections. Work with partner organizations to install. The signage tool allows for the following information:

- Network name
- Trail name
- Primary (where applicable), permitted, and prohibited user types
- Difficulty rating
- Directional arrow (if applicable)
- Cautionary information
- Emergency location information
- Partnership logos
- Territorial acknowledgement

Cautionary Signs

RSTBC Partnership Agreements require cautionary signage ahead of all black diamond-rated or higher TTFs. Using the inventory and assessment from Action 1.8, work with partner organizations to install cautionary signage ahead of drops, jumps, skinnies, and other active TTFs rated most difficult according to the RSTBC Mountain Bike Trail Difficulty Rating Matrix.

Way-Marked Routes

In addition to trailhead and cautionary signage, work with partners to explore opportunities for “way-marked routes” or “reassurance markers.” Way-marking helps users link together a series of trails into a loop or longer route. For example, the Penny Lane-Good Sir Martin climbing route involves linking together several trails and navigating many intersections. This can be confusing for users that are unfamiliar with the site. Adding “climbing route” blazes or branding on signs would help people know whether or not they are on the right track.

Interpretive Signage

Finally, work with First Nations and stakeholders to develop educational and interpretive signage. Potential topics could include:

- Indigenous culture and history
- Bear safety
- Trail etiquette
- History of Blair Rifle Range

Priority: High

Potential Partnerships: RSTBC, LSCR, DNV, NSMBA, NSR

Cost: \$\$

2.2. Work towards a cohesive trail network.

Though there are many trails in the CMHC lands, the area is still evolving as a cohesive network. Trail-based recreation has become increasingly popular and diverse since the first hiking trails in the CMHC lands, yet there has been no official trail network planning. There is an opportunity to enhance the recreation value of the site by improving connectivity and adding experiences that are currently missing or under represented. New routes and connections have the potential to let users move more efficiently through the network, create more options for loops, reduce congestion, and appeal to a broader range of skill and experience levels. Improving connectivity will also bring more value out of the volunteer work that has gone into the trail network over many years.

There were mixed opinions from stakeholders on need for additional trails, however there was a strong desire for new routes expressed in the public online survey. Additions to the network should be targeted and carefully considered. The density of the existing trail network leaves limited space available for new trails, and parking areas at major access points are already busy. The proposed additions to the network are therefore aimed primarily at specific user experiences improvements rather than expanding the network capacity.

If a Section 56 trail-based recreation area is established, Section 57 approval is still required for the development of new trail and recreation facility construction. New trail development should be extremely judicious and include a rigorous planning process that assesses potential environmental impacts and ensures maximum value to the overall network is extracted from any new trail development.

Collaboration with neighbouring land managers is also critical. The additions proposed below align the LSCR's *Trails Strategic Plan* goal for new trail development,¹⁸ and recent investments in their East Area trails. If management plans for DNV and BC Parks lands on Mt. Seymour are developed in the future, more opportunities to improve connectivity and add missing experiences may be identified.

The following proposed connections (fig. 9) are concepts that would contribute to a more cohesive trail network. Further stakeholder engagement, and trail and environmental planning involving ground-truthing, should be undertaken before the routes are put forward for Section 57 approval.

¹⁸ Action 4.2.1, P.49

All new trail construction should be undertaken according to the best practices for sustainable design and construction outlined in Action 4.1. New trails should avoid the Riparian Management Zones to the greatest extent possible, and be offset at least 30 m from existing trails in order to minimize the likelihood of connecting braids.

The UXO Legacy Site program should be consulted prior to any construction. All site workers must be briefed on the use of the area as a former military site, and on protocols for the event of ammunition being discovered, in addition to standard safety protocols. Work in the Restricted Recreation Zone would require a UXO clearance survey prior to construction.

Improving Connectivity

- **A. Extend the Penny Lane-Good Sir Martin uphill-only route** north of its terminus at the Baden Powell Trail uphill to the top of Corkscrew/Incline trails. This project would require close collaboration with the LSCR, as well as BC Parks and the NSMBA. Explore two options: one that uses Mushroom Trail, and another consisting primarily of newly constructed singletrack. Compare environmental impacts, construction costs, and benefits to user experiences and network connectivity. This connection is the highest priority for potential new routes as it has the most benefits to the network, including:
 - Improving the connectivity between lower and higher elevation trails in the CMHC lands;
 - Giving users more looping options, including both shorter and longer loops than are currently available;
 - Improving connectivity between CMHC, LSCR, and BC Parks trails networks;
 - Benefiting wheeled and foot traffic equally, as the low-speed differential between user groups makes for a lower-conflict multi-use trail, and
 - Providing an option for mountain bikers to reach the top of the site without resorting to riding on Mt. Seymour Road.

Priority: Medium

- **B. Explore opportunities to reduce congestion on low-elevation multi-use trails** such as Bridle Path. Stakeholders reported that the higher traffic low elevation trails sometimes become crowded to the point that they are not enjoyable. Work with stakeholder groups to identify pinch points and explore options to alleviate them through twinning or widening problem sections. Pinch points may include steep sections that result in speed differentials and TTFs or other technical features that cause beginner mountain bikers to dismount. Consider options for uphill-downhill and hiking-biking twinning. The goal on these targeted improvements should be to reduce congestion at problem locations and facilitate dispersal into other areas of the network.

Priority: Medium

- **C. Separate user types on the Baden Powell between the hiking-only section and Upper Severed.** Stakeholders singled out this section of trail as particularly conflict-prone, and field observations revealed significant braiding. Consider closing this section of the Baden Powell to mountain biking and creating a new mountain bike primary downtrack that starts

and finishes at similar elevation levels, but is located north of the Powerlines Access Trail. Create a spur off the new downtrack to link Dale's Connector with Upper Severed. The goal of these actions should be to reduce user conflicts, stop braiding and degradation of the Baden Powell Trail, and improve connectivity to other mountain bike primary descent trails in the network and in the LSCR.

Priority: Low

Missing + Underrepresented Experiences

- **D. Create a new hiking-only trail east of McCartney Creek.** Both hikers and mountain bikers expressed a desire for a new hiking-only route and a need for more low-intensity trail experiences. The proposed trail would give hikers and trail runners a new loop option that involves elevation gain without sharing a trail with descending mountain bikes. The existing multi-use climbing-only trails also meet these criteria, but are heavily trafficked. The lack of views or destinations would make this a neighbourhood-focused journey-based trail rather than a high-traffic destination trail. Given the current access constraints, this focus can be considered desirable. The challenge for this trail will be identifying a partner for construction and maintenance.

Priority: Low

- **E. Develop a new expert-level mountain bike-primary descent trail.** Stakeholders and survey respondents both responded that the extreme ends of the mountain bike spectrum – beginner and expert – are underserved.

Beginner (green circle) trails are best located at the base of the mountain, close to parking areas, and accessible by either other beginner trails or directly from an access point. On Mt. Seymour, the ideal locations are near the Old Buck parking lot. The isolation of the CMHC lands from major access points limits the potential for beginner trails. However, there is a need for more beginner options on Mt. Seymour. Work with DNV, BC Parks, and the NSMBA to explore options for beginner mountain bike trails adjacent to the CMHC lands.

There is more potential terrain for expert (double black diamond) mountain bike trails within the CMHC lands. Further, differing management priorities in neighbouring jurisdictions limit the potential for expert-level trails outside the CMHC lands. Work with the NSMBA to develop a concept for a double black diamond mountain bike-primary descent trail. The forthcoming RSTBC Mountain Bike Trail Difficulty Rating Matrix can provide guidance on allowable features. Aim to create a progressive trail in the sense that optional features allow riders to progress towards more difficult ones.

Priority: Low

Figure 9. Opportunities for new trails and enhancements.

2.3. Develop new and existing nodes.

There are locations throughout the trail network where trail users naturally congregate. This can involve a pause to confirm route-finding, or a regroup at the beginning or end of a climb or descent. Evaluate the need to create more space at these locations shown in figure 10 to prevent groups of people from blocking trails, and work with partner organization to enhance these nodes. Nodes should include amenities, such as new or updated large format maps at these locations to support wayfinding. Consider additional rustic benches.

Priority: Low

Potential Partnerships: RSTBC, NSMBA

Cost: \$\$

Figure 10. Potential nodes.

2.4. Continue to work with the DND on safety and educational signage.

The CMHC lands are part of DND's UXO Legacy Site Program and feature signs warning site users about the risk of UXOs in the area. Coordinate with DND to ensure their signage about the history of the site and dangers of UXOs is present and visible.

Priority: High

Potential Partnerships: RSTBC, DND, CMHC

Cost: Administrative

SIDEBAR

Stakeholders and survey respondents raised concerns about both the impacts of increasing trail-related traffic on the adjacent community and the need to preserve access to the trail network for those that live outside of the District of North Vancouver. While seemingly at odds, both are important goals that should be pursued.

Access to the CMHC trails is spread out over a number of points, including several in residential areas, all of which are outside of CMHC lands. None of the parking spaces are on CMHC land either, and most trailheads are also under the jurisdiction of neighbouring land managers.

With all the major access points located outside of CMHC lands, RSTBC has limited ability to act on access and traffic-related concerns. Nevertheless, it should remain open to participating in a planning process lead by a neighbouring jurisdiction if the opportunity arises. Parking, capacity, and access are complicated, cross-jurisdictional issues on Mt. Seymour that require further study and collaboration. DNV and BC Parks have particular interest in these issues, and the jurisdiction to enact improvements. There are opportunities for comprehensive, long-term improvements, as well as small scale changes to make better use of existing infrastructure. Northlands Drive and McCartney Creek Park, for example, was suggested by stakeholders as an underused staging area and access point that could take pressure off other access points with minor investments in signage and upgrades to connecting trails. There may also be opportunities to relieve congestion through better communication of the availability of parking at less-used locations and on off-peak times.

2.5. Consider an application from the Greater Vancouver Orienteering Club (GVOC) for permanent orienteering controls.

The CMHC lands are an important site for the orienteering community, which uses the area for events and to teach orienteering skills. GVOC would like the opportunity to install permanent orienteering controls on trailhead posts throughout the site. Consider a Section 57 application for orienteering controls with the following conditions:

- Require any permanent and temporary orienteering courses to be located outside of the Riparian and Restricted Recreation management zones to avoid environmental impacts and protect participants.
- Orienteering maps for the area should mark the Riparian and Restricted Recreation management zones as out-of-bounds and instruct participants to use authorized stream crossings.
- Ensure the design of orienteering controls is not confused with the orange blazes that help mark the Baden Powell Trail.

Priority: Medium

Potential Partnerships: RSTBC, GVOC

Cost: Administrative

4. SENSITIVE ECOSYSTEMS

3.1. Apply sustainable trail design principles to existing and future trails.

Continue to apply sustainable trail design principles to trail work and upgrade existing trails to avoid environmental impacts. Key issues to monitor and address include erosion and sedimentation, impacts to hydrology, tire rutting of tree roots, impacts to trees' critical root zone, and trail braiding.

Refer to RSTBC recommended sources, including:

- The British Columbia Ministry of Forests, Recreation Manual, Chapter 10
- Lightly on the Land, The SCA Trail Building and Maintenance Manual. (Student Conservation Association). (2006).
- Managing Mountain Biking: IMBA's Guide to Providing Great Riding. (International Mountain Bicycling Association). (2007).
- Natural Surface Trails by Design, Physical and Human Design Essentials of Sustainable, Enjoyable Trails. (Troy Scott Parker). (2004).
- Trail Solutions: IMBA's Guide to Building Sweet Singletrack. (International Mountain Bicycling Association) (2014).

Additionally, refer to locally developed standards that offer modified practices for working in steep, wet, coastal hemlock forests.

- District of North Vancouver Fromme Mountain Trails Environmental Assessment, Diamondhead Consulting Ltd., 2015
- Lower Seymour Conservation Reserve Trail Standards, Diamondhead Consulting Ltd., 2018
- BC Parks Park Design Guidelines & Data, Ministry of Environment Lands and Parks, 1996

Priority: High

Potential Partnerships: RSTBC, NSMBA

Cost: Administrative

3.2. Promptly close unauthorized trails.

The construction of unauthorized trails is a persistent issue for all land managers on Mt. Seymour. While many of the now-authorized trails on the North Shore were originally constructed without permission, the “ask-for-forgiveness” rather than “ask-for-permission” approach is not tenable in the CMHC lands from a legislative or environmental perspective. New trail construction on Crown land requires consultation with First Nations and allowing unauthorized trails goes against the Province’s commitments to First Nations made through adoption of the *Declaration on the Rights of Indigenous Peoples Act* and *Truth and Reconciliation Commission of Canada’s Calls to Action*. Further, while no species at risk have been reported to the BC Conservation Data Centre, the CMCH lands are part of a series of large, connected, forested areas managed for conservation. As such, we can assume the presence of a variety of species, and care should be taken to minimize impacts of the trail system on wildlife. Each trail has a “zone of influence” (see Figure 11) extending far beyond the trail tread in which wildlife is impacted by trail users. The proliferation of unauthorized trails fragments habitat and leaves little space for wildlife to exist undisturbed. Finally, unauthorized trail construction is prohibited by Section 57 of FRPA.

Figure 11. Zones of Influence

Priority: High

Potential Partnerships: RSTBC, LSCR, DNV, BC Parks, NSMBA

Cost: \$

Protect streams from the impacts of dogs.

Stakeholders and site observations raised a number of environmental concerns related to dogs, including dog waste and disturbing streams and riparian areas. Pursue a number of measures to reduce the environmental impacts of dogs in the CMHC lands, including:

- Installing protective fencing and educational signage at stream crossings to prevent dogs from entering watercourses and riparian areas. Prioritize busy, low-elevation trails such as Bridle Path and Baden Powell.
- Including the location of off-site receptacles for dog waste on trail maps. While waste collection is outside of the scope of services provided by RSTBC, trailheads in neighbouring jurisdictions have dog-specific waste receptacles. Their location should be located on CMHC trail maps to facilitate proper disposal of dog waste.
- Working with stakeholders to install educational signage on proper dog walking etiquette, the environmental impacts of dog waste, and the impacts of dogs in streams on salmon spawning and spawning habitat.

Figure 12. Example of fencing and signage designed to keep dogs out of a stream.

Priority: Medium

Potential Partnerships: RSTBC, LSCR, DNV, BC Parks, NSSK

Cost: \$-\$\$

3.3. Assess and protect streams and riparian areas.

Streams and riparian areas are the most valuable habitats in the CMHC lands, the most impacted by trail construction and use, and are protected by the Province's *Water Sustainability Act*. As trails in the CMHC lands were constructed without authorization or approvals, all stream crossings and trails in riparian areas should be inventoried and assessed by a Qualified Environmental Professional (QEP). The assessment should look for habitat disturbance caused by erosion, sedimentation, altered watercourses and hydrology, disturbed vegetation, and other impacts. Recommendations should address trail conditions such as inadequate setbacks, instream piers, and trail sections that requires hard braking before stream crossings. The assessment should also recommend an interval for reassessment.

While this study did not include a detailed environmental assessment, clear impacts to streams and riparian areas were observed on the following trails:

- Baden Powell between the Bridle Path and Mushroom intersections
 - Issues: Inadequate setbacks, erosion and sedimentation, seepage and channelization of trail tread.
- Blair Range Trail stream crossings
 - Issues: Lack of stream crossings, hardening of riparian areas.
- Hill Drive Access
 - Issues: Inadequate setbacks, erosion and sedimentation, flooding.

Priority: High

Potential Partnerships: RSTBC, NSMBA, NSSK

Cost: \$-\$\$

4 IMPLEMENTATION

The following tables summarize the recommended actions, and their priority, cost, and potential partner organizations. Adoption of the RAMP represents agreement in principle to the overarching vision for the recreation management, but not a commitment to move forward with all individual items. Implementation of each initiative is still subject to approval through partnerships, agreements and annual budget processes. The implementation timeline will need to remain flexible to respond to funding availability and the needs of the community.

Priorities are described as high, medium, or low. Lower priority actions may end up being completed before high priority actions due to funding opportunities or partnerships. The order in which actions are completed will be determined through annual work plans by RSTBC and partners.

Costs are listed as order-of-magnitude estimates only. \$ = less than \$20,000; \$\$ = \$20,000-\$50,000; \$\$\$ = greater than \$50,000. Administrative costs ("Admin") are anticipated to be undertaken by existing staff with existing resources. There are opportunities to pursue many of these recommendations through the partnerships and creative funding strategies, so the costs do not reflect a commitment to spend by RSTBC. Some projects may require capital spending requests.

More detailed cost estimates will be required during planning, design and prior to construction of specific trail actions. Some actions will require professional services, while other trail upgrades can be planned and/or executed by volunteers and the use of RSTBC standard details.

The implementation plan should be reviewed regularly to respond to changes, ensure integration with other RSTBC plans and policies, ensure compatibility with plans and policies of adjacent land managers, and take advantage of potential funding and partnership opportunities.

MANAGEMENT

Table 3. Management Actions

#	Action	Priority	Cost	Potential Partnerships
1.1	Establish the CMHC lands as a non-motorized Trail-Based Recreation Area under Section 56 of FRPA.	High	Admin	RSTBC, FLNRORD
1.2	Assign primary, secondary, prohibited, and directional trail uses.	High	Admin	RSTBC, DNV, LSCR, NSMBA
1.3	Use management zones to guide planning across the site.	High	Admin	RSTBC, DND

1.4	Consider applications for limited, non-exclusive, non-motorized commercial activities.	Medium	Admin	RSTBC, BC Lands Branch
1.5	Minimize the impacts of eMTBs.	Low	\$	RSTBC, NSMBA
1.6	Update the inventory and assessment of existing trails using RSTBC's forthcoming BC Mountain Bike Trail Difficulty Rating Matrix.	High	\$-\$-\$	RSTBC, NSMBA

PARTNERSHIPS AND COLLABORATION

Table 4. Partnership and Collaboration Actions

#	Action	Priority	Cost	Potential Partnerships
2.1	Establish and maintain a highly collaborative relationship with stakeholders and neighbouring land managers.	Medium	Admin	RSTBC, DNV, LSCR, Metro, BC Parks, DWV, NSMBA and other user groups
2.2	Enter into Partnership Agreements for the maintenance of trails in the CMHC lands.	High	Admin	RSTBC, LSCR, NSMBA
2.3	Support user-group volunteers to enable higher levels of maintenance.	Medium	\$	RSTBC, CMHC, NSMBA

USER EXPERIENCE AND COHESIVE TRAIL NETWORK

Table 5. User Experience and Cohesive Trail Network Actions

#	Action	Priority	Cost	Potential Partnerships
3.1	Implement a comprehensive signage and wayfinding system.	High	\$\$	RSTBC, LSCR, DNV, NSMBA, NSR
3.2	Work towards a cohesive trail network.	Medium – Low	\$-\$\$\$	RSTBC, LSCR, DNV, BC Parks, NSMBA
3.3	Develop new and existing nodes.	Low	\$\$	RSTBC, NSMBA
3.4	Continue to work with the DND on safety and educational signage.	High	Admin	RSTBC, DND, CMHC
3.5	Consider an application from the Greater Vancouver Orienteering Club (GVOC) for permanent orienteering controls.	Medium	Admin	RSTBC, GVOC

SENSITIVE ECOSYSTEMS

Table 6. Sensitive Ecosystems Actions

#	Action	Priority	Cost	Potential Partnerships
4.1	Apply sustainable trail design principles to existing and future trails.	High	Admin	RSTBC, NSMBA

Summary for S2Q09

What keeps you from using the trails more often?

Answer	Count	Percentage
Trail maintenance (SQ002)	126	7.40%
Safety concerns (SQ003)	25	1.47%
Wildlife (SQ004)	16	0.94%
Lack of desirable routes (SQ005)	177	10.40%
The trails are too challenging (SQ006)	56	3.29%
The trails are too easy (SQ007)	172	10.11%
The trails are confusing/difficult to navigate (SQ008)	94	5.52%
Conflicts with other trail users (SQ009)	64	3.76%
The trails are too crowded (SQ010)	232	13.63%
Lack of time (SQ011)	792	46.53%
Lack of parking (SQ012)	274	16.10%
Nothing (SQ013)	448	26.32%
Other	178	10.46%
Not displayed	8	0.47%

ID	Response
101	A bit far from home
106	Dogs off leash and dog droppings
116	too many bike trails and bikes
131	I would ride more if there were more flow trails.
136	Trails closer to my house
176	Always enjoy a sign update oriented to compass
206	Not on my doorstep! But you can't change that.
316	Not enough new mountain biking trails
356	I now live outside of Lower Mainland
386	Is work a valid answer? Lol
811	Missing some more progression style jump trails
816	I live closer to Fromme
831	live out of the area
871	Parental duties/ free time remaining in the day
921	Weather
936	Variety. Need more challenging trails and routes.
976	Live on Bowen Island
1006	Would love more beginner trails to ride with my novice fiance
1141	Zero planning went in to the trails as it was a free for all
1151	The lack of variety. Would be nice to have more trails.
1196	Would like to see more trails built
1216	Long drive - bridges
1231	Lack of variety in trail choices.
1331	J have to drive an hour
1566	Weather and more variety
1586	Spreading out to other trails and mountains
1611	Attitudes of the residents in Blueridge. Their entitlement is sickening especially when they were able to shut down the entire neighbourhood because of CoVid. Everyone knows half of District council lives in Blueridge and so when one resident whines about parking the Council jumps into action and makes it difficult for anyone else living nearby (not in the Kingdom of Blueridge) not get to the trails. Additionally the mountain bikers constantly digging and making trails only for biking is also unfair. What was once a good waking trail becomes hilly and only for biking.
1686	Being a full time post secondary student
1816	Access is Vancouver without a vehicle, not in car sharing home zone, not much transit
1841	Traffic/travel time
1876	weather
2021	Weather
2036	I live in Whistler, but grew up in Deep Cove, rode the trails daily for years!
2071	Don't live close enough

Quick statistics

2936	Weather
2961	Too many mountain bikers
2986	Bikes a risk to seniors
3061	Million dollar home owners trying to prevent fair and equitable access to the trails
3151	Flooding that makes some trails impassable
3196	the mountain bikers can be very rude and entitled and don't share the path
3351	traffic at 2nd narrows
3426	Poor Weather
3496	Dogs offleash running at me or jumping on me
3591	I use them daily
3601	Work
3636	Traffic through the bridges
3716	Distance- we walk over from Lynn valley so it's a longer day, don't always have time
3791	There's a tonne of other places to ride in the area
3946	Putting gravel on the lower trails to smooth them out has made them too easy and less fun for trail running and hiking
3976	I use the trails as much as I can. Limiting factor is only other family commitments
4011	My schedule
4086	Mountain bike trails need to be more challenging for advanced riders to progress
4106	Too crowded on weekends
4226	There is an awful lot of climbing for any run on Seymour. I'd love to see some more variety - I love technical, but it would be great to see other flavours as well. With respect to the climbing, unless one shuttles or is in amazing shape, you're kind of one and done. Having some looping options that don't take you all the ad down to bridle would be amazing!
4371	I had to move from Vancouver to afford housing
4441	Lack of trails/lack of parking
4456	Please make more challenging trails - double blacks and pro lines
4481	Drive time to get there
4496	Fromme is closer to my house. I need to time going to Seymour with the traffic.
4551	Not enough intermediate to advanced downhill/Enduro oriented trails
4766	I live closer to Fromme!!!
4791	Far away
4811	Lack of updated/newschool trails, jumps
4916	Distance from trailhead (driving distance)
4956	Trails are such a big part of my life!
5146	I live in Squamish now
5176	prices of gas
5261	I live in City of Vancouver, and when I come to the North Shore for hiking, I use a variety of trails, not just these ones
5281	Going through health battle and I'm chemotherapy.
5426	It's paradise!!
5491	Weather
5536	Old age
5736	Other trails to use.
5821	I dont go alone so limited by others availability
5961	Need more trails.
5996	Commute time
6051	Time taken to drive to the trails
6211	Traffic to the North Shore
6396	Desire to explore other areas, variety
6421	Work
6466	Have to park in park gate and risk being towed
6631	Living in Squamish

10951	Weather
10991	Too many bikes
11021	I live closer to other trail networks, Fromme and Cypress
11111	Lack of childcare

Summary for S2Q09b

What safety concerns keep you from using the trails more often?

Answer	Count	Percentage
Answer	24	1.41%
No answer	1	0.06%
Not displayed	1677	98.53%

ID	Response
116	Bikes try to be aware of us, but sometimes they come 'upon us' on a curve or hill. Makes me quite nervous of getting hit.
1926	Confrontations with mountain bikers. Bikers not slowing around dogs and young children Bikers not giving right of way Being yelled at by bikers for being on "biking trails" that are multi use trails
2721	Mountain bikers flying down trails without any regard for hikers.
2971	I'm a single female, nervous around dogs. There are some weird people around!
2986	Sensitive nature areas for nature learning and discovery are being overwhelmed by fast moving bikes and now e-bikes posing serious and life-threatening safety risks. Rarely to bikes signal or call out when they are coming behind you. Dr. Joanie Simms Gould UBC "If any risks are present, it is a deterrent to engage in healthy outdoor activity." Seniors are avoiding trails close to home due to risks negatively impacting quality of life.
3576	The mountain bike trails are in disrepair and hazardous for most intermediate skill level mountain bikers. Even the most commonly used trails are not well managed. There are no trails for beginner mountain bikers such as children. The "main" connector trails such as Bridal Path and Baden Powell are in terrible shape. I appreciate how smooth and accessible Old Buck trail is in and this level of quality should be applied to the Baden/Bridal tra
3651	Off leash dogs in big groups.
3671	Narrow trails - hard to see bikers coming
7156	I'm a little worried about seeing a bear and also not comfortable with using the trails on my own
7796	Winter hours make it hard to use weekend evenings due to lack of light and safety about being a lone female runner in the evening.
8376	Some trails have poor maintenance or need work to improve safety and improve lines (address off-camber corners, fill in ruts, replace woodwork with safer wider wood)
8966	Only concern is the condition of the trees (especially old rotten Alders) along the section from Marykirk Place to Canyon Creek. They are continually falling over often onto the trail. Some are still standing after being marked for removal in years past!
9051	Not well marked, fear of getting lost.
9341	Maintenance issues on trails. Poorly educated trail users not moving off trail when stopped creating collision issues. Mushroom parking lot has seemed unsafe at times.
9391	Bicycles on hiking only trails
9456	Some of the trails are very rocky, rooty and eroded.
9556	bears / wildlife on a seasonal basis
9666	Aggressive off leash unpredictable dogs.
10066	As I use the trails alone, and am female, not sure who else might be around that is not there for good reasons
10191	As a rider, who in the past has ridden alot on the trail I have slowly stopped for safety. Off leash dogs is a large issue, with people who can't control them and have no understanding of horses. I have been riding trails on and off on the North Shore since I was a kid and then people were familiar with horses. Today people are not and are often not courteous, do not understand the consequences of uncontrolled dogs or bicycles are
10226	Water, high creek flow.
10531	Mountain bikers, nothing against the sport, but they should not have the right of away. We definitely don't need more trails but please make half of all existing trails with a hiking priority and change some to hiking only. Hikers shouldn't have to avoid using the trails on the weekends due to safety.
10996	Too many mountain bikers dominating the trail system which seems to cater more to

mountain bikers than other user groups.

11131

There aren't many pedestrian-only connections in the area, and it's hard to tell due to poor directional signage which mountain bike trails are descent ones, which I would want to stay off of, and which ones are climbing trails (safer). I don't want to create conflict or put someone else in danger, so I stick to the wide, open trails (Powerline, Baden Powell, Bridle) at the extremities and don't really get to explore much of the middle.

ID	Response
86	I often trail run with my dog, who I will keep on leash when there's mountain bikers. Most bikers are quite good and I stay off the trails that they are descending down as much as possible, but it can be frustrating on a weekend when the trails are full of bikers. I often go to other trails where biking is limited or there's more signage to indicate the paths and the direction (like Mt Fromme).
101	The mountain bikers can be a bit aggressive sometimes.
106	Dogs are in water, blocking trails, jumping up on people and dog droppings or bags of them frequent on the trail.
111	Speed differential
116	See note above
126	I have encountered a few very rare conflicts (so closer to "never" than to "sometimes"). I have seen off leash dogs in the way, hikers or trail runners not paying attention, and mountain bikers unaware of how they might surprise other users but all of these instances are very very rare.
131	Never seen a horse there. Hikers and bikers have a great relationship and are very polite to each other. I do find hikers generally stay off some of the faster downhill bike trails.
146	Other trail users are courteous with the "rules of the road" - i.e. keep to left/right, allow to pass, bikers announce themselves from behind. I feel its common knowledge that the trails are for everyone, and that they are shared. If you go early in the day, you can avoid heavier traffic as well as weekdays vs weekends. The majority I come across are polite and courteous.
151	I avoid trails when there are more bikers
161	Dogs : barking; off leash; out of control; too many for just one person to handle at a time; excrement being left behind, even in plastic bags;
171	Sometimes I get scared for the unleashed dogs.
176	None- always listen for bikes and horses and stand back, bikers are very courteous calling out and even asking if I/we need direction, dog walkers always seem to have things under control All good!
201	Some in our group have dog-phobias. VERY occasionally, a mountain biker disregards hikers and comes dangerously close. However, almost always the bikers we meet are very considerate, and there is no problem co-existing. PLEASE DO NOT TRY TO SEPARATE THESE USERS: in our experience, the two groups feed off each other in sharing their outdoor experiences.
206	Unleashed dogs running into a group of hikers. This is so dangerous, we don't see the dog until it's right in front of us and on a steep edge that's a bad situation.
216	most conflicts are with commercial dog walkers who have off leash dogs and more than available. Some conflicts with walkers who do not want to share the trail with other users, though most walkers/hikers are very friendly.
221	None
226	Commercial dog walkers with too many offleash dogs Hikers blindly hiking up downhill primary trails(lack of signage indicating this is the problem) New mountain bikers unaware of trail etiquette and respect
236	I find almost all trail users to be pleasant, accommodating and supportive. Overcrowding at certain junctures can cause some frustrations but this is normal.
241	One dog walker with several dogs off leash, not under control.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

246	Over decades of mtn biking, the only people who have been negative have been hikers telling me that I had no right to be there. Thankfully that hasn't happened in many years.
251	Off leash dogs can be aggressive sometimes, and large dog walking groups can be challenging to navigate with a bike.
	Inexperienced bike riders can be dangerous on certain trails.
256	Horses on the trails just don't mix in my humble opinion. Horses are large, startle easy, and defecate in large amounts (sometimes when the horse is still walking, unknown to the rider - hence no clean up).
261	Commercial dog walkers all over the place with multiple off leash dogs, not picking up after then, dogs chasing people, sometimes attacking, even single dog walkers are very rude and obnoxious when their dog misbehaves
276	Everyone I have come across has been very understanding and respectful
286	Off leash dogs have a tendency to chase mountain bikers. Also they sometimes are on the trail in a spun unsafe location where a collision can occur.
	Some issues with hikers when wearing ear phones when they can't hear me call as I approach on my bike.
306	It's not really conflicts but more sometimes a dog running front of me. Or a biker bit well educated on where and when and how to stop on a trail.
316	People are generally respectful.
341	Everyone who uses the trails are very respectful
356	Walkers or trail runners running up mountain bike trails and then getting angry when bikers come down.
361	No conflicts, though i have witnessed a few runners going down bike only trails a that have a few fast blind corners. Better signage for single use trails, this has the potential for conflict.
366	Issues with dog walkers with off leash dogs on main mtb trails
371	Lack of trail Etiquette by some dog owners.
391	It's not really all that hard to leave space for other users, smile, and thank them for making space for me. No conflict. However, as a mountain biker, I do have to acknowledge that other (perhaps newer) mountain bikers seem least observant of established guidelines for etiquette and right of way. Not so much to the point of "conflict", but more just being respectful of others encountered.
421	There are times when hikers/dog walkers are walking up a mountain bike primary trail (downhill) and don't have a strong recall of their animals. This poses a risk to both the animals and users.
431	All trail users have been respectful
436	Hikers unwilling to share the path.
446	I think most people I have met on the trails have been extremely courteous. We are all out there just enjoying mother natures playground after all....
451	everyone I've encountered seems very friendly and happy to be out
491	All trail users tend to be respectful in my experience.
501	Eveyrbody is accomodating to users of the trail system.
511	Too many users on the access trails. Mostly dogs not on Leash
526	They say if you don't see the asshole in the room, it's probably you. As a mountain biker I can see that being the case. We are the most disruptive trail users when it comes to our interactions with others. I don't considering having to slow down to avoid a collision a "conflict", just something to be expected on a multi-use network. Dangerous situations on high speed trails can be avoided with proper signage and education on trail etiquette.
546	Out of control dogs
561	Conflicts have not been aggressive at all, however they are frustrating. There have been large group hikes (estimated 50+ people) that are coming up a bike trail I want to go down. Groups that size pretty much take over a trail and mean others can't use it without it feeling like a downtown footpath, and that is not what I go to nature for. Most dog walkers are great, but some don't keep their dog under control. I have been chased and barked at
566	All user groups are generally courteous of one another.
576	I have noticed Little to no conflicts
586	Some Walkers don't acknowledge that some trails are multiuse and give you the stink eye even when going really slow. Some walkers even get into downhill bike only trails which would endanger them and riders.
591	People are generally courteous and both hikers and bikers seem willing to give way when appropriate
611	While mountain biking down a trail, dogs from walkers/hikers sometimes run right in front of you and are hard to avoid hitting.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

621	Hikers or dogs on fast mtb trails. Having to slow down/stop/move over
631	Walking or walking dogs on downhill primary trails.
646	Not cleaning up their dog poop and taking the bags with them
651	The vast majority of trail users are considerate and respectful. Only occasionally have I encountered walkers (dog walkers) or hikers hiking up dedicated mtb only trails despite signage.
676	Walkers/hikers: biggest issue I've experienced is people walking up Empress Bypass. Not sure if there's signage on the bottom/exit but it's a hazard for sure Mountain bikers: some bikers just lack etiquette and perform risky maneuvers to pass
681	Dogs running around. Not usually okay.
686	Never encounter hikers that much. More so on mt Fromme trails. Never had an issue here.
691	Off leash dogs can be aggressive sometimes.
696	As a mountain biker I try to give right of passage most time to walker/hikers but they always stop which I find very pleasant. I always say hi to other trails users and they reply back with a smile. Good interaction and absence of conflicts. One instance of a hiker on a mountain bike trail but the person wasn't aware so I let them know that it could be dangerous.
701	People are (for the most part) really friendly/happy in the woods.
711	Occasionally, pro dog walkers have too many dogs, sometimes off leash. Some off-leash dogs don't like bicycles. I will give the dog walker notice that the dog should be controlled while in an area where mountain bikers ride, as to make sure the dog doesn't get scared, or attack anyone who is riding. I am always friendly and try to approach slowly so the situation doesn't get tense.
721	-also Hikers walking up dh specific trails. 99% of people are reasonable and respectful of others, regardless of what activity they are doing however, bike trails should be signed for direction i.e. "downhill" trails should be signed for no entry to bikes at the downhill end. There will always be the 1% of trail users that are disrespectful so no point trying to address them
731	None, I have found everyone pleasant luckily but I am pleasant also.
741	Unleashed aggressive dogs
746	Very seldom but sometime those that feel they have the trail right of way etc.
781	Usually hikers walking up mountain bike trails.
786	1. Walkers walking up downhill high speed use mountain bike trails 2. Dog poo bags all over the place, on sides of trails, hanging in trees, tree stumps. 3. Dogs off leash biting, chasing, cutting off mountain bikers. 4. Beginner mountain bikers stopped in danger high speed blind parts of trails. 5. Mountain bikers crowding trail heads.
796	I haven't had conflict on any CMHC trail during my use
801	I've been riding my bike on these trails for years and don't recall ever having a conflict with another user. Everyone seems very courteous to everyone else in the forest.
806	n/a
811	Sometimes trail etiquette is not known enough by more beginning mtbers, some hikers and dog walkers ignoring the downhill only signs... but in general not to many conflicts
816	Some dogs are friendly others should be a bit more trained
821	No warning of mountain bikers coming from behind or they do not slow down Dogs off leash and not under control Dogs not staying on trails Dog owners not cleaning up after their dog or flicking it into off trail areas
831	describe absence of conflict? people are generally polite and accepting of other users.
846	Everyone I run into is friendly and accommodating. Worse conflicts are users that don't respect the multi-use trails or dog walkers that don't pick up after their dogs.
861	Lots of smiles, high fives, and positive vibes.
871	Have been bitten by a dog in commercial dog walk group twice... have had a dogs stop right in front of me causing me to crash. I was the yelled at for almost hitting the person's dog (I crashed to avoid hitting it). Dog walkers with huge groups of dogs just not in control of the group.
896	I find people to be quite considerate on the trails.
901	I always ride, run or hike with an open mind and treat everyone with respect
916	some hikers and dog walkers hiking up a fast downhill mountain biking trail. probably it's a multi use trail but it's dangerous for both parties.
936	Hikers often on bike only trails. They are generally respectful and get out of the way, but it can be dangerous when they don't or aren't expected.
941	Hikers and dog walkers on bike trails

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

946	Most people are courteous and say hello however even though I am a mountain biker so (newer, less informed?) mountain bikers are not courteous and pass aggressively.
951	Hikers walking up high speed downhill trails.
961	Dog walkers - off leash that are too friendly. I haven't had any aggressive dogs, but some that jump up. I'm not opposed to the off leash though.
966	Rarely happens.
971	Trail runners/hikers on dangerous sections of trail. High speed jumps and blind corners.
976	It's common to encounter other trail users, but a smile, patience, and moving over as appropriate always works out. From my experience, people put in the forest are generally happy and fine with other trail users. Never seen a horse though.
991	Most of the trail users are very friendly. Conflicts exist but is mostly coming from less experienced users. The recent increase in users has added to the problem
996	With mountain biking the general rule is uphill travel has the right of way on 2 way trails and other users often proceed as the primary users and ignore that bit of etiquette. As a MTB rider I stop and give horses lots of space and talk to them so they know I'm a human, and for hikers I slow down to pass or stop and let them go by. Trail runners and dog walkers tend to be oblivious to etiquette and figure they are king of the trail.
1006	Sometimes people are walking dogs on fast downhill mtb trails and it can be dangerous
1031	I have had positive experiences with all trail users.
1061	Always had a good time.
1066	Off leash dogs, or commercial dog walkers with multiple dogs that are not in control and blocking trails. Frequently they (commercial dog walkers) walk the wrong way down bike primary trails which can be dangerous.
1076	1) Dog walkers using 1-way for MTB trails and insisting they are multi use.
	2) Poor riding etiquette of younger riders ignoring right(s) of way, too much speed on popular trails, and no demonstrable social skills when passing or bombing downhill trail sections.
1091	Usually different trail users not understanding which trails are shared and which are designated for other activities and the proper directions of travel
1106	Everyone I encounter is courteous on the trail.
1141	Commercial dog walkers. And trail builders doing what they want without permission. These are the very people you've given a permit to now maintain the CMHC trails.
1146	Most people are respectful of trail use guidelines and its not a problem. Having designated trails for each user group is important for safety.
1151	A lack of knowledge/no etiquette to sharing trails.
1156	Dogs off leash
1161	For the most part users are respectful. Need more downhill primary bike routes to allow bikers to have a proper experience and not try and ride trails not for there intended use.
1166	Very occasional hikers walking up downhill trails. Scary!
1171	Just very fast bikers that dont let you know they are coming...and when you get a couple of dog walkers together just too many dogs....but generally good. I avoid the trails on the weekend due to crowds. Less crowded before covid...more non locals
1186	Everyone's nice out here
1191	Blind corners. People walking up biking trails.
1201	Generally things are good but at times someone will make a comment or just be generally unhappy that we are there.
1206	Hikers and dog walkers on bike only trails
1216	Users not always aware of others.
1231	Walkers/ Hikers & Dog walkers are always courteous to me on my mountain bike and I try to respond with the same courtesy. Thankfully, I have never seen a horse on Seymour. They destroy trails and leave poop all over the place.
1251	Hikers and cyclists are respectful to each other in general.
1271	Hikers travelling the wrong direction with of the trail
1281	Never noticed any conflict. Generally everyone I meet is polite and considerate
1286	I find everyone on the trails, of all user groups, are generally quite accommodating and happy to share the trails. Lots of friendly great people out there.
1291	Dog walkers and hikers can be rude on occasion
1296	I seldom see other walkers in this area.
1316	Conflicts are rare and the minimum option is sometimes. I would say rarely is a better description of conflicts I see in the area.
1321	Primary issue is poorly controlled dogs (and left bags of dog poo)
1326	Didn't experience any conflicts.
1331	Loose dogs on downhill trails! And also on mtb trails it would be great if hikers give bikers the right of way

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

1336	Have been bitten by off-leash dog being walked by commercial dog walker.
1346	Just getting in each others' way! When I'm mountain biking, I'm afraid I'm going to turn a corner and there will be a hiker there - I really don't want to hurt them/their dogs etc. and some folks aren't aware that they may be, for example, hiking up a downhill mountain biking trail. As a runner, I often run down the Good Sir Martin trail because of that reason (it's easier to step off for bikes coming up hill).
1356	Be polite, share the trail
1381	Conflicts are very rare. in recent memory i can only recall 2 conflicts with commercial dog walkers with too many dogs or uncontrolled dogs.
1391	Experienced users are generally considerate, but with increased usage from newcomers, it's clear many people don't understand trail etiquette (specifically walkers with and without dogs + mountain bikers). E.g., bikes ascending have right of way over bikes descending (on bi-directional trails), walkers shouldn't walk 5 people abreast so that runners or bikers can pass safely. Basic etiquette is not understood.
1406	N/a
1411	Everyone is always very friendly, regardless of their mode/activity
1416	Commercial dog walkers sometimes have too large of groups to safely control
1421	Everyone seems friendly.
1426	I find almost all the trail users respectful and polite.
1431	I do not remember any conflicts that are noteworthy. Other than the occasional dog walker with dogs going crazy.
1456	Occasionally hikers or dog walkers will walk up MTB primary trails. This is not a conflict but can be dangerous for both parties.
1486	I find most people are pretty good everyone once n a while you run into a dud but what can you do besides start IQ testing before you walk.
1496	Commercial dog walkers with multiple off leash dogs all over the trail causing a hazard to other users
1501	Commercial dog walkers occasionally have to many dogs out of their control.
1506	Hikers on trails, mtb on trails not properly prepared
1511	It's a well functioning system and everyone gets along.
1536	Conflict generally occurs on multi directional trails that are narrow with blind corners ie bridal path. Increasing trail width or making separated uphill/downhill or wheels/feet routes would help.
	Family's with small children walking up a high speed downhill bike trails. Parents don't realize it's equivalent to allowing a child to play on a street with cars zooming along. Trail signage: downhill biking primary is needed at bottom of trail
1551	Aggressive barking dog attacks
1556	Hikers do not take into consideration the type of trail/day of the week when they choose the trails to hike. I encounter hikers on weekends walking up black MTB-primary trails, often with small children, which doesn't really seem like a smart idea. It's frustrating for me as a biker since I have to lower my speed considerably and I'm stressed more than necessary because I'm afraid to hurt the hikers.
1561	Dog waste bags being left at the side of the trail
1566	1 person with 8 dogs that don't know how act/react when bikes are around. Most can't control them.
1571	Hikers/walkers climbing up a primary mountain biking trail
1576	Never had any
1586	Occasionally a dog walker with a dog off leash takes exception to a buddy's dog (also off leash).
1591	Mostly dog walkers walking up downhill trails.
1596	Trail users are generally friendly. Haven't had any bad interactions in this area
1601	Hikers sometimes on downhill trails
1611	Bikers think they own the trails and dig up and make walking trails biking trails
1621	Generally unfriendly/unreasonable people
1631	Trail runners going up mountain bike-centric / blind trails.
1646	Do it's off leash can be an issue
1661	As a rule, people are friendly and share the trails. Can only think of one incident with an e-bike rider who was going way too fast on bridal path...and nearly hit me.
1666	Hikers on mountain bike trail features, which is more of a safety concern. Easily resolved with education. Aggressive dogs off leash. Oddly only negative experience with some Ebikers. Never encountered Horses
1676	Not sharing and respecting use of trails

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

1681	Walker/hikers/dog walkers are sometimes surprised to mountain bikers and become scared and/or upset. Mountain bikers are sometimes coming down ascending primary trails at a speed that isn't safe. This is likely due to a lack of easier descent options.
1686	Never had any conflicts, always shared the trails without any issues.
1691	In my 20+ years of frequent mountain biking (most of it on the North Shore), I've never had a conflict. Obviously there is always a bad apple in every community but I'm consistently amazed by the friendly nature of the trails. The worst I've experienced are occasional issues around basic etiquette like someone blocking a trail entrance. Usually I chalk it up to inexperience.
1701	Dog walkers don't always keep their animals under control.
1736	Occasionally there is a walker hiking up a primarily-down mountain bike trail
1746	Dogs off leash not under control (usually walkers)
1766	Dogs congregating in packs
1771	Commercial dog walkers having trouble controlling many off leash dogs.
1776	Some hiker and dog walkers go on 'downhill only' mountain bike trails. This endangers them and the mountain bike trail users. There are lots of trails for everyone and these conflicts could be easily avoided with a little thought
1781	Mainly hikers coming up or runners going down mtb trails, it unsafe for all parties
1786	Hikers will often be on mountain bike only trails with headphones in. Extremely dangerous for both parties. Trail signage needs to be much better. Off leash dog etiquette is non existent. Poo bags, large dogs roaming free in front of mountain bikers, dogs who bite at mountain bikers legs, dogs who approach people who are not comfortable with dogs. I've seen 2 horses in my 4 years. Mountain bikers can be dicks too yes we all know that.
1791	No conflicts. Be nice and people will be nice.
1796	Not much of a conflict, but trying to educate hikers about their presence on high speed downhill mountain bike trails when there is a very good hiking alternative right nearby.
1801	Most people are extremely friendly. Sometimes off leash dogs get in the way.
1811	Generally, I think all trail users are kind and courteous and respectful of one another. I've had a dog get too close to my front wheel on a high speed trail (boogie nights) and it is for this reason I think dogs should be kept off the high speed flow trails
1816	Off leash dogs are dangerous on bike trails, or inattentive hikers on downhill mountain bike trails
1831	I've never seen equestrians, everyone else is pretty polite.
1841	Aggressive dogs have attacked me on several occasions. They have always been with commercial dog walkers. I have written letters to the DNV. They responded that they were not able to really do anything about this sort of situation since land boundaries are vague and enforcement is difficult since so many land owners are involved
1851	Dogs not on leash.
1876	dog walkers seem to always be losing their dogs and they block the trail or the dog walkers need help finding them. not a big deal, love dogs so not really conflict
1881	Off leash dogs occasionally (but rarely) cause problems chasing groups of mountain bikers.
1886	Hikers walking up downhill mob primary trails. Especially John deer. Hikers choosing to walk up bridal path exit rather than take the adjacent hiking route
1911	Not sharing the trail
1916	- Uncollected dog feces or non-buried human feces. More outhouses and signage needed. - Hikers/walkers/dogs traveling up or around blind pitches or corners - Mountain bikers stopping in the middle of trails
1921	I make a big effort to be courteous to all trail users and I find in return others do the same.
1926	Being yelled at for going up "bike trails" that are multi use. Asking bikers to slow and not hit dogs/kids Bikers using bike to hit dogs out of their way Bikers running over/hitting dogs with bikes Being yelled at to get out of the way of bikes Being yelled at to get dogs out bikers way Being yelled at for not moving out of bikers way fast enough
1931	Sometimes ppl are rude but almost always they're great and respectful
1941	Right of way / not following rules / wrong trail etiquette
1956	Some trails could be designated downhill mountain bike primary and signage could be placed to inform walkers/hikers unfamiliar with the area. More trails like Fern Gully need to be built.
1961	Aggressive dogs, off leash, dog poo, dog poo in bags left or thrown into the bush.
1976	Dog shit bags on trails are the biggest peeve out there. Some asshole left this here.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

1981	I often have conflicts with off leash dogs when i am both biking and trail running
2016	Hikers using busy mtb trails
2036	I find everyone I meet to be friendly and very accomodating
2041	I've never had a problem on the trails. Everyone is very accommodating to each other!
2076	Bitten by a dog being walked by a commercial operator. Needed to get a tetanus shot.
2096	one person serval dog of leash all over the trail
2106	Too many bikers that disregard others using the trails and go too fast, especially when traversing into another trail.
2116	Everyone seems respectful. I often give way while mountain biking and greet other trail users. I've never experienced a conflict as a result.
2121	Incredibly rude people, poop on the trails all the time, stopping in the middle of the path, not letting a faster person pass.
2126	Dogs are usually off leash and often not in control. I've been bitten twice this year
2151	Mostly no conflict. Dog walkers who cannot control their animal or do not pick up after it are really the only issue.
2176	Dog walkers who cannot control their dogs are a nuisance, but usually they are fine. Interactions with all users have always been positive, wether I am on foot or on the Bike. eBikers though not listed above seem to ahev a ridiculous sense of entitlement. Had a few unpleasant discussions with folk headed down climbing trails or climbing descending trails, which is very dangerous.
2181	People walking their dogs up a downhill bike trail and not paying attention happens once or twice a year, most people are good.
2186	Lack of manners when passing or when moving over.
2196	Everyone is very reasonable and generally follows trail etiquette
2206	People are pretty respectful and trails we ride are used primarily for riding.
2211	I always find other trail users courteous and I am courteous to them so conflicts are never an issue
2216	Generally commercial dog walkers have more dogs than they can control. Dog waste left on the trails. Dogs running free in water ways and off trail
2221	Narrow two-way trails,blind corners therefore unable to socially distance. Hikers/runners on downhill mountain bike trails in areas dangerous for high speed collision
2236	I've never had any issues with other users.
2286	Rare to even see a horse rider, but an increase in volume would probably result in conflicts.
2291	Dogs off leash Leash lunging and trying to bite me. Barking dogs- dog out of control. Rude dog owners.
2301	Folks with Dogs off leash that do not have control of their animal - I have had dogs jump in the way of my bike while passing slowly, and also jumping onto my children while we are out for a hike.
2316	Horses damaging trails
2321	Trails are sometimes busy, but everyone seems to be very accommodating.
2351	Often run into users walking dogs off-leash on bike primary trails. The vast majority of the time this is no problem, the dogs are friendly and under control. Very occasionally the dog walker will not have the dog under control and the dog gets in the way of descending bikers, which depending on speed and trail location can be dangerous. Again, this is a small minority of dog walkers, and usually sharing and yielding as appropriate is easy.
2361	I haven't experienced any conflicts
2366	Nothing major. Sometimes just some right of way issues and the occasional dog aggression towards my dog
2371	Mostly dogs off leash causing issues with mountain bikes. Or hikers uphill on trails designed for downhill mountain biking.
2376	Occasionally an unaware hiker is coming up the mountain biking down trails
2381	Dog walkers quite often have too many dogs all off leash, too much dog poo. Hikers sometimes don't share the trail with mountain bikes
2391	There will always be oblivious and self important people, form of activities doesn't seem to matter, some people are just rude.
2401	Sometimes when I'm riding I don't have a conflict. Other times conflicts are absent.
2406	Very rarely - hikers/walkers being loud, playing music. Dog walkers - somewhat common to encounter aggressive dogs off-leash, terrifies my daughter who does not like dogs. Mountain Bikers - A few I've encountered are rude and aggressive.
2416	Have come across a number of other trail users in my time riding there, and everyone has been relatively friendly. No conflicts.
2426	Find that as long as I'm respectful of others they almost always act in kind.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

2436	Walkers/hikers found on downhill mountain bike trails. Even if the intention is not to be rude or put people in danger, a mountain biker going fast on a downhill trail can be intimidating... Better signage would help keep everyone safe. Promotion of hiking routes to ensure hikers are not left with the only option to walk down/up a MTB trail. NSMBA is doing a great job at including hikers feedback in trail development.
2446	Been bitten numerous times; Many dogs are aggressive to bikers; Dogs run out in front of you no matter if on leash or off - usually not under control; Some dog walkers unwilling to get dogs under control when asked Dog poo everywhere Dog poop in bags everywhere Additionally I have had a few negative interactions with E-bikes. Ran into from behind when climbing a climbing only trail
2451	People hiking up downhill trails
2461	I've never had a "conflict"... I just pull over when another trail user passes by.
2471	I have not experienced conflict with any of these trail user groups but the trails are becoming noticeably busier. I will occasionally encounter a walker / hiker / runner ascending a downhill mountain bike primary trail in very fast or tight sections of trail which require rapid braking. While everyone is usually friendly in these situations I am concerned that a collision with one of these trail users could occur.
2476	Most people are courteous if you're respectful of them. Occasionally I'll encounter someone who doesn't know the rights of way and gets a little upset but it's usually nothing.
2481	Periodically I will come across hikers who appear grumpy they have to share the trail. I'd say it happens once a year.
2491	Dog walkers leaving turd bags along the trail to "come back for" later.
2496	The climb trails are multi use. Not everyone knows the proper trail etiquette, so using the climb trails in certain areas becomes difficult.
2506	Hikers - hiking trail that have narrow wood features, resolved with a smile and education. Aggressive dogs of leash Occasionally Ebikers being rude, dangerous. No encounter's with Horses
2531	Generally I find all trail users friendly
2541	Off leash dogs running at us barking like they are possessed, and especially the dog owners who allow this to happen, are a constant problem
2551	Commercial dogwalkers don't control their dogs well. Equestrians leave huge piles of horse shit in the middle of the trail. Runners with headphones are unaware of bikers behind them.
2566	Very rarely I encounter a hiker who feels more entitled to the trails than mountain bikers. This is a very tiny percentage of hikers - mostly people are friendly, happy to share the beautiful trails, and encouraging of me mountain biking down a challenging section of trail!
2571	Recreational outdoor access on Seymour is excellent and peaceful
2581	Conflicts are extraordinarily rare and usually involve tourists/non-locals who are not aware that the area is a intensively used mountain biking area and are not alert to and expecting the presence of bikes.
2586	Dogs not in control. Mtn. bikers w/too much testosterone.
2596	never any major conflicts but sometimes hikers are hiking UP a mtn bike downhill primary trail and then they get defensive when politely reminded they are on a downhill mtn bike trail. Also e-mtn bikers going down uphill primary or going up downhill primary trails.
2606	Overwhelmingly, I find people of all user-groups respectful of each other and friendly. As a mountain biker, I put extra effort in to yield to other user groups and to say hello.
2611	The majority of the conflicts have been verbal conflicts from people with off-leash dogs who don't know how to behave around mountain bikers. Occasionally hikers can be rude and don't respect the shared nature of the trails. I have never had an issue when I am running or hiking and encounter mountain bikers.
2621	I have never encountered horses. Generally all other users seem happy to smile and say hello. I've never experienced a conflict.
2626	Be kind to others, greet, slow down. Seems to do the trick 99% of the time! General respect to the world. :)
2641	People generally use the trails as they are intended. It would become problematic if hikers started to use fast downhill mountain bike trails because they could get hurt. Generally the trail network is well respected with each activity using each trail knowing whether or not it is shared.
2656	Commercial dog walking on busy trails seems to cause hazards for mountain bikers, while also creating some disruptions for elderly trail users.
2666	I make an effort to be nice/courteous to other trail users. Especially non-mtb users. Off leash dogs often block the trail meaning I have to stop. Not a big issue but the owners are usually

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	very apologetic. This actually occurs more with other mtbers who have bought their dog on their ride.
2676	Dogs off leash can be a problem when people are unable to control their dogs.
2681	Hikers walking down trails which are predominantly used as downhill trails by mountain bikers and being oblivious. Any group being oblivious to other users (eg using headphones). E-mtbs riding UP trails which are generally downhill. Never seen a horserider on any of these trails
2691	Generally everyone on the trails are respectful and courteous to one another. Occasional there is entitlement to the right of way, but many conflicts are just people being spaced out and unaware.
2696	No conflicts because I brake for trail users and always use polite greetings when meeting people
2701	dogs with no leash run into the way, dog walkers going up mtb downhill trails is super dangerous!!! dogs can be a hazard esp of leash.
	i had the most trouble with commercial dog walkers
2706	People are very friendly in the trails. Residents are sometimes not very friendly around the parking areas despite parking and acting in a respectful way in the neighbourhood.
2711	Some dog owners take their dogs on fast DH trails and don't keep the dog under control Other less experienced Mtn bikers not understanding trail etiquette and there are no posted signs
2716	commercial dog walkers not controlling the dogs in their care
2721	Mountain bikers thinking that the trails are just for their use, not being respectful of hikers. Building jumps and ramps on trails which make hiking more difficult.
2731	Some dog owners do not discipline their dogs adequately. This can result in fear for young children or adults
2741	The trails I visit typically do not typically support the other sports very well.
2746	I ride respectfully and know that others are as entitles to use these trails as I am.
2761	Never had any conflicts with any of the above. People are very courteous.
2766	Walkers not understanding the risks to themselves or mountain bikers of using a downhill biking trail and expecting right of way (my experience was on Empress Bypass where a family didn't understand that they were walking down a flow trail with mountain bikers coming at high speed behind them - I forget the details, but similarly have seen hikers on John Deer).
2771	The majority of trail users get along well and give each other space.
2776	Everyone I meet on the trails are very accommodating.
2831	Dogs not under control are an issue sometimes, And dog excrement almost always.
2836	Bikers not slowing down for hikers. Dogs off leash and not under control.
2841	Mountain bikers yelling at me to get out of the way as they come fast down a trail, forcing me off. Damage to trails such as unauthorized bike jumps, evidence of damage to trails and tree roots. I also walk my dog (singular) often on the trails, occasionally run into commercial dog walkers with more than their allocated number of dogs which can be intimidating. I have also interacted with many friendly and careful users - bikers and dog walkers
2846	Everyone seems to get along; although walkers/hikers should not be using the same trails as the downhill mountain bikers because - Walkers can hear us, but bikers cannot hear them - Walkers tend not to be 'situation aware' of where they are standing/walking when a mountain biker rides comes along and tend to be in the way
2851	Too many people can access these trails; either by ebike, shuttling or riding. Since the access is easy, parking easy and convenient too many come out to ride/walk/hike especially on weekends and if the weather is nice. The shuttling aspect and ebikes allows those not fit to ride up bypass this fact. Speaking of which, I thought motorbikes are illegal on private lands and BC Parks.
2861	No issues/conflicts with other people.
2866	Most people are very good at sharing the trails, and I feel the nsmba has done a great job on defining which trails are MTB primary, and which are not.
2876	Everyone's been respectful and using the trails has been an extremely positive experience - physically and mentally.
2886	Bikers going too fast near hikers & aggressive off leash dogs
2891	Everyone is friendly and respectful and happy to be outside
2901	Not conflict and no verbal exchanges; most bikers are great but at times mild irritation with entitled mountain bikers riding too fast or who it seems feel people hiking or walking need to move aside so as not to interrupt their ride or block their path; large groups riding together;

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	parking congestion
2906	Try not to get run over by mountain bike riders. Bells should be mandatory!
2936	It was a bit busy during the beginning of covid but everyone is polite and I've had no conflicts.
2956	Hikers/Dog walkers regularly use ear buds and can not hear bikes approaching even when being yelled at.
2961	Mountain bikers going too fast Mountain bikers getting angry and rude when wanting to pass Mountain bikers nearly running over hikers/dogs.
2966	Dogs off leash and not under control of the owner
2971	Dog walkers who assume it's ok for their animal to leap at you. Rarely see equestrian activity
2976	Some hikers seem to get mad at mountain bikers very easily. They think they are going too fast because they don't understand how much control they have at speed.
2981	Dogs off leash crossing my path, causing me to brake hard / almost lose control.
2986	Shared use of trails is hazardous to seniors where mountain bikes are present. So we avoid trails, reducing options for nature learning, socialization and exercise. The demographic of seniors is growing, I am a strong advocate for single use trails in nature abundant areas to maintain quality of life. On a weekly basis, bikes come speeding down trails onto community trails and roadways. Pristine areas for nature learning are shrinking.
2991	I don't find that the trails are crowded. I also find that people are generally courteous and positive. I am usually mountain biking so I stop for walkers & hikers to let them pass.
2996	I find most users are friendly and great at sharing the trails.
3001	Away from the busy tourist trails it's fine. Would be good to have more hiking only it can be unsafe to have people walking up bike trails but hasn't resulted in conflict just some near crashes, but there are only a couple of designated hiking trails with no group that maintains those to my knowledge
3006	They are travelling contrary to approved trail direction, e.g., uphill on downhill section, sometimes stopping in blind areas where it is difficult to see ahead of time and/or stop safely. In some cases, e.g., dog walkers with a larger number of dogs, they do not yield/share the trail appropriately/courteously as one might hope.
3011	Unleashed dogs nipping at heels while running, or dogs in the way on mountain bike trails
3016	If I'm walking on a mountain bike trail it's making sure I can get out of the way/don't interfere. Most people are pretty nice.
3021	I haven't had any conflicts on Seymour, but I have, on other train systems, had conflicts with off-leash dogs on mountain bike trails. Again it's rare - usually everyone is very friendly and I don't run into conflict at all!
3026	I've never seen a horse on any trails, most hikers/mountain bikers are courteous
3031	I've never had a single conflict, everyone has been very friendly and respectful whether I've been hiking, trail running, or biking, and I've tried really hard to be respectful back.
3046	Generally conflicts are minimal and due more to people's personal attitudes towards etiquette. Most hikers I encounter do not hike on the advanced downhill trails and are considerate in prioritizing bikes on the bike primary trails. Mountain bikers often gather in the middle of trails. I do not usually encounter off-leash dogs that cause issues.
3061	It is the trail runners and hikers that decide to walk up the mountain bike primary trails that worry me. Not people are super awesome and considerate. Just a few bad apples that might ruin it for the rest. Perhaps better signage like do not enter at the bottom of MtB primary downhill trails would help
3066	Everybody is pretty chill. I'm on a bike, so always give right of way to others
3076	People seem pretty respectful. No issues to date.
3081	Almost never have I come across anyone who isn't courteous on the trails.
3096	Hikers or trail runners using downhill only bike trails
3101	walkers walking up downhill mountain bike trails
3106	Dogs on loose
3116	weekend hikers and dog walkers often don't have situational awareness or good trail etiquette (moving over). Mountain Bikers are usually very courteous and willing to share the trails.
3121	Being told biking is not allowed on a trail that is clearly signed as multi use
3136	Everyone has been really respectful.
3141	I had a dog charge me twice in one instance as I passed it and owner on a run and the owner did not attempt to intervene.
3146	People in the way
3156	Poo bags being left on the trails
3166	Dog walkers do not have dogs on a leash and typically have too many dogs. Mountain bikers are aggressive and do not openly communicate their intentions or respect runners.
3176	Bikers and Hikers struggle to share the trails so I avoid trails with bikers. The conflict is

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

usually related to them taking us by surprise and then needed to slow down. Over the years there have been a few close calls but never a serious collision.

I have a dog that gets startled when the bikers surprise us and she barks so that also causes conflict. I keep her on leash when on the trails that are more designated for bikers for this reason.

3186	Poorly trained off-leash dogs chasing mtbs
3196	Mountain bikers are often very entitled and feel they own the trail. They are often rude and threatening
3221	In my experience everyone is really relaxed and friendly as long as the trail usage type is clearly signed e.g. "downhill mountain bike primary" or "hiking only, no mountain bikes"
3226	Never any problems
3231	We share the trail well
3251	Right of way misunderstanding
3256	Area is great. I hope it continues to provide a balanced mix of options for the various user groups
3266	Just bikers who are possibly new and don't understand trail etiquette or experienced ones with poor trail etiquette. As a biker it hurts to complain about other riders
3271	Lack of courtesy to let others pass. Vast majority of users is very considerate
3301	I've always found everyone to be friendly - we are all out enjoying the trails.
3306	Dogs off leash running up or standing still on downhill trails - very dangerous m!!
3316	Many bikers are courteous many are not. The trail leading from Berkley/ Hyannis is a connector trail walked by families or seniors like me. Some bikers resent seniors walking on a trail they want to zoom by on their bikes to get to biking trails faster, or back to their vehicles jamming our streets. I recognize we have world class trails and thrilled for bikers that they have these to enjoy. All I ask that I can also enjoy my 30 min walk in peace
3321	Dog owners not controlling their dogs which turns in to a problem especially as we have 2 family members afraid of dogs. Dog fever around or on the trail.
3346	I encounter dog walkers/hikers/runners nearly every outing and meetings are always pleasant. I only encounter horse riders occasionally and have never had an issue with them either.
3351	never. in my experience all trail users treat each other with respect. everyone is out to enjoy nature. As a biker I always strive to say hello and move out of the way of other users...
3361	Never had any conflicts
3391	Large groups of mountain bikers expect hikers and others to always give them right of way.
3396	People are people. Dogs are dogs
3411	Unleashed/uncontrolled dogs.
3421	I share the trails based on usage and am always polite - no issues. Off leash dog walking groups are a little scary for my street rescue dog, but they try to round them up when I let them know. Usually works out just fine.
3426	Dog walker had an aggressive dog not controlled and was rude about it. Stated a growl was better than a bite! For the most part I have not had any issue with dog walkers. This was a one time situation. It does seem that many dog walkers have too many dogs to look after.
3431	I've ridden these trails for 20+ yrs and purchased our home primarily due to the proximity to this trail network for mountain biking. I've NEVER had any issues with other users.
3441	Lack of awareness of other users and unaware of trail etiquette. Also off leash dogs.
3471	No encounters with equestrians in my 8 years of riding Seymour. Handful of encounters with what appear to be commercial dog walkers with out of control dogs that do not react well to mountain bikes (despite stopping on trail). Also handful of encounters with hikers/trail runners ascending multi-use trails which are prevalent downhill mountain bike use (John Deer, Boogie Man) with headphones in or standing in poor places. I always yield.
3476	I only sometimes tell hikers that empress bypass is a very high speed mountain bike trail and not a good idea for a walk, and respectfully advise them to go to old buck or another way down instead. It's never escalated to be anything more than friendly advice.
3491	Most of the people are friendly and respectful
3496	Dogs running at me, barking at me, jumping on me. Always just walked by owner, never a commercial group
3501	I am a multi user (hiking, running, mtb) and respect other users. The majority of people are courteous and say hi.
3551	Not really a worry. Sometimes dogs are aggressive
3561	Commercial dog walkers are not always compliant with their dogs not in the leash that chase other dogs (like mine), Most of the time though everybody is very friendly and accommodating for the fact that we all want to enjoy the trails
3571	Mountain bikers not yielding to hikers Generally most people are polite/friendly

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

3581	Dogs not on a leash and running around endangering mountain bikers as they just pop out of nowhere...
3586	Everyone is friendly and we get along g with all users. Except the cranky Blueridge homeowners association and how they like to put up signs trying to tell me what to do/not do! Lol as if anyone listens to them
3591	Very few complaints . Occasional high speed cyclists on a down hill can be intimidating
3601	Everyone seems fairly accommodating in my experience.
3606	Dog people assume everyone get along with dogs. I get nervous around dogs. I do t appreciate them running around when I'm biking.
3616	I have not had conflict on these trails, interactions have always been respectful with other trail users.
3651	Aggressive dogs off leash and commercial dog walker cannot control the dog. Our dog was bitten and I don't feel safe with the dogs around my young kids.
3661	Conflicts is a bit strong, but dog walkers are on these trails all the time and I frequently have to navigate around them. I've had a couple of conflicts with dog walkers who did not have their dogs under control.
3666	Everyone gets along very well these days, even with the explosion of use by all user groups. With the exception of equestrian. They stopped using the area back in the late 80's.
3671	Trails are narrow not much room to get out of the way of bikers.
3696	Generally conflict free and mutually respectful interactions. The occasional grumpy hiker but they're the exception, not the norm. I always make a point to slow down and say hi. I understand a fast mountain biker can look scary to walkers.
3711	These are not conflicts per se, just instances where the trails were over used or crowded
3716	Not really conflicts- occasional interactions that might negatively impact my enjoyment
3756	Whenever I ride and encounter other people, I assume they have right of way and in my experience they have assumed the same for me. So we both slow down, move to the side/pass each other, say a quick hello and continue on our way. Have yet to have a negative encounter on the trails.
3786	Bikers are inconsiderate and if confronted or questioned, can be threatening
3791	On a few occasions I have crossed paths with hikers - these occasions occurred without any conflict.
3796	Out of control dogs
3801	Dog walkers have too many unleashed dogs at a time. None of them have recall.
3806	I have been bitten by dogs before that are off leash. Not very serious bites but enough to draw blood on two occasions.
3821	As a trail runner, I think I'm respectful of others and especially try to stay clear of Bikes. haven't really had issues at all.
3836	What conflicts? In general the mountain bikes are very careful and accommodating of all the other trail users
3846	Bikes travelling fast on trails. Sometimes having to jump out of the way. On the most part everyone gets along. Bikes should have bells so you can hear them coming!!!
3861	People are generally pretty good on these trails. There is a clear definition between trail types.
3876	Dogs are sometimes off leash and not under control and/or out of sight of their owners. Once in a while these dogs chase runners. Very rarely (every couple years or so) a dog acts aggressively and bites or attempts to bite.
3881	Dog owners also leave poop bags next to the trails fairly often. Mostly the Commercial Dog walkers that specialize in the more aggressive (Alpha) dogs. Some of the more "entitled" younger Mountain Bikers.
3886	Some mountain bikers do not slow down to pass or yield to other trail users.
3891	I never had any issue with other users, whereas they be trail runners, dog walkers, hikers or mountain bikers. Everyone is always smiling and enjoying their time in the forest / mountain.
3896	People are really friendly and follow good 'trail etiquette': making sure to pass other safely (both bikes and hikers), keeping dogs close if they aren't well trained etc. People are generally in a good mood when you meet them on the trails.
3901	People are always so friendly
3916	very minimal and not really conflicts. I have come across a couple of hikers that seemed to hate a mtn bikes presence.
3926	Come across commercial dog walkers that had no control over the animals. Dogs off-leash. Bags of dog shit left everywhere.
3936	Was bitten by a dog while mountain biking
3946	A few mtn bikers with poor etiquette who don't let you know when they are coming behind you.
3951	As a owner of two dogs sometimes the packs of commercial dog walkers who appear

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	unmanaged can attract my dogs and delay my routes or require my interdiction.
	Some routed are bad for new MTB's who simply don't yield to off-bike trail users when travelling downhill
3966	COMMERCIAL dog walkers. Too many dogs. Lack of control. Not hiking on well establish led trails (using smaller unofficial trails)
	They should be banned from the area
3976	I try to be very respectful of all other users. I always offer a friendly smile and go slow or get off my bike. I've never had a bad conflict.
3981	the odd time a dog off leash may approach me quickly and i wonder if it is friendly or not. high majority of cases the dog is friendly. the owner could help by calling out before the dog reaches me that "it's friendly"
3991	Haven't experienced too many conflicts on Seymour
3996	There are a few MTB only downhill trails that are fairly high speed and technical on a mountain bike. I have run into hikers hiking up these trails more often and it can be very dangerous. Worst case would be a collision, but as a mountain biker when traveling at any speed down a trail it takes a lot of focus and if a hiker or dog is encountered it can be distracting enough to cause the biker to crash.
4001	I find the trail network to be very amicable and friendly!
4006	Hikers walking on designated mountain bike trails
4011	I have not had any bad experiences with other trail users.
4031	Easy to be nice. Sometimes people could be a bit more aware but no big issues.
4051	I haven't has a problem
4086	Hikers walking up mountain bike trails. This creates a dangerous situation for both parties
4091	Recently moved to North Vancouver, everyone had been very friendly out on the trails.
4106	Only conflict I have run into is commercial dog walkers who NEVER have control over the dogs under their care and one always goes after my dog. :(In my opinion, you cannot possibly have control over the number of dogs they walk at a time and as they do not know the dogs well. Have never had a conflict with horse back riders as have never seen one!
4111	Usually my dog doesn't like another dog
4121	So many riders lacking trail etiquette, being rude and expecting people to jump out of their way. Hikers going up mtb trails like John Deere and having no clue how unsafe it is, often with earbuds in and when riders stop to politely suggest another trail they become combative. Lack of signage and trail system management.
4141	People hiking on downhill primary mountain bike trails.
4161	I have only had 1 conflict in the past 20 years when an unleashed dog nipped at my leg while I was mountain biking. I was moving slowly up a climb when the dog ran down the trail towards me and nipped at my leg. The owners were very apologetic.
4171	Occasionally during busy weekends there are a few bikers going too fast on multi-use trails (eg Hyannis connector).
4176	If I have my dog with me the pack of dogs always harass my dog. Always! Also there is a ton of dogs making it impossible to ride around.
4186	Mostly respectable. Some dogs off leash get too excited. Sometimes hikers come up Mtb trails. No large issues though
4201	Hiking up the wrong trail
4211	Only when walkers or dogs are on high speed bike routes like walking up Severed for example.
4231	Always had respectful interactions with other users.
4236	Everyone is nice. Dog is walkers follow signs
4251	Dogs on the loose getting in the way of fast downhill tracks
4271	Other riders without care for others safety
4286	Commercial dog walkers leave tons of poop bags behind
4296	Dog walkers and hikers using mountain bike only trails
4326	Right of way, people listening to music with headphones unaware of others approaching
4331	Commercial dog walking and kids don't mix
4336	N/A
4341	Sometimes hikers or dog walkers walk on mountain bike trails and nearly cause collisions.
4346	People will be walking up a downhill trail and sometimes create an unsafe situation
4356	Hikers walking up trails that are mountain bike primary causing unsafe situations
4361	Hikers walking up MTB-only trails way too often.
4366	Was bitten on the ankle by an off leash dog at the intersection of John deer and good sir Martin. Walker out his dog on a leash but refused to provide his contact info.
4371	It happened a couple of times to meet inexperienced hikers who don't understand the use of some trails reserved for biking. This happened twice to me once on lower expresso and once

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	on krikum krankum on Fromme, never on Seymour.
4381	Dogs running into way of bikers
4411	Congestion on trails not meant for hiking. I.e. hikers on mountain bike only trails
4431	Everyone is just lovely.
4436	Most users are friendly and courteous. Every user group will have some bad apples.
4446	Just people not reading trail signs for direction and use
4451	Never had any notable interactions or conflicts. Everyone is very nice on the trails
4456	None for the most part
4461	Occasionally commercial dog walkers/hikers can be unaware of riders due to having earphones in and cannot hear you behind them. I have also encountered hikers on high speed sections of trail where they don't hear you coming and it is difficult to stop/avoid them.
4501	Occasionally run into dogs/owners not using leashes. Unpredictable what the dog is going to do.
4511	Have never had a conflict with hikers/bikers. Have never seen a horse in CMHC zone. People generally respect the trails and each other. Have only rarely ever experienced conflict. Perhaps being in nature chills people out.
4516	People walking up the down mountain bike trails
4521	I've bumped into the above activities, I guess I wouldn't really call it conflict so much as I would call it passing by
4526	Everyone is very respectful of each other's activities and happy to be out on the trails
4531	Walkers should not be walking up mountain bike trails that are primarily downhill and primarily mountain bike trails.
4551	Conflicts typically involve a mountain biking primary downhill trail with walkers coming uphill not paying attention. I have been injured because of other users standing or not yielding on narrow bridges on Bridle Path. No conflicts with trail runners or other users who are aware of their surroundings.
4561	Unleashed aggressive dogs
4566	Everyone seems to be super nice and happy to be on the trails.
4571	Just overall trail congestion.
4596	Walker/hikers with headphones on standing in features on black diamond/double blackdiamond mountain bike trails.
4611	Going on high speed trails with dog off leash. trail runners on trails that are mountain biking only. I once saw 20 trail runners on ladies only. They got mad at me that I told them not to walk on that trail
4616	Sometimes encountering large groups of trail runners on mountain bike primary trails. On more than one occasion I've almost collided with trail runners standing in the middle of the path, or climbing the path with headphones in, unaware of my approach. It's a slight safety concern.
4631	Hikers often seem annoyed when I'm riding my mountain bike but I always try to be courteous and friendly . I always slow down when I cross paths with them. I have come across hikers walking on downhill mountain bike trails and I always try to inform them to be careful
4641	Conflict with only two riders ever yelling at me about my dog. I also ride bikes and I was riding with my dog, I think the two people just suck real hard...
4696	Only coming across fellow riders! :)
4701	NA
4706	Conflict while passing this people on the trail.
4721	Walker say bikers are going too fast
4741	Smug looks, hikers walking bike trails
4761	Every trail user I've ever met was friendly and happy to share the trail. Likewise, I've always been courteous to other trail users. I'll usually offer to yield to hikers and dog walkers. No equestrian encounters yet.
4766	Nothing bad. Just people traffic.
4776	Hikers not understanding mtb only trails
4786	Its chill bro
4801	Sometimes have very minor conflicts with other trail users not being considerate but this is rare and overall everyone is quite polite
4811	I have never had a conflict with another trail user
4826	In three decades of using these trails for hiking, biking, dog walking, I have had one negative interaction with a biker who was displeased with me hiking on a multi use trail with my dog. All other interactions have been positive.
4846	- Hikers/dog walkers on bike specific trails. - Hikers/dog walkers who don't understand sharing trail use. - Frankly hikers/dog walkers who don't understand what a shared trail

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	Is and what that means for mine and their use
4856	Lack of awareness from non MTB riders that some trails are mtb primary.
4861	No real problems with multi users. The odd people hiking up a fast downhill mtn bike trail
4871	On occasion people's unleashed dogs run into the path of your bike on trails which can be quite dangerous. This is rare though.
4881	Plenty of space for everyone
4896	Sometimes people travel up the wrong direction or are standing on trails while bikes are coming down
4906	Na
4916	Off-leash dogs with oblivious owners, generally inconsiderate. Many people who do not know the area walk up downhill only MTB trails in hopes of finding alternative hiking routes/challenging themselves—puts people at risk.
4921	I find people are generally supportive of every type of trail user as long as they are respectful. Never had a conflict with any other user. I always allow walkers to pass and am careful / slow down when I see kids or dogs.
4936	For the amount of people on those trails, I'm always surprised by how respectful people are with one another. I've never seen a conflict. People always help each other and are courteous.
4961	The only conflict I have ever had is with inexperienced walkers/hikers going uphill on popular mountain biking trails at peak times of the day. There should be increased signage at trailheads that indicates hiking uphill is dangerous and requires extreme caution. Many of the trails are "blind" with lots of trees and tight turns - it makes it very difficult for a MTB user to slow down and avoid someone travelling uphill on a trail.
4986	Occasionally obstructing a descending trail
5026	Never any problems or conflicts
5091	Larger hiking groups would walk side by side on the trail. Sometimes they would stop in the middle as well to rest.
5116	I have been bit by dogs 4 times. I also step in or ride through dog poo about every 4th or 5th time I'm out on the trails
5181	People walking up downhill trails or walking down climb trails
5186	Arguments about right of way or use of downhill trails uphill
5191	Rudeness
5196	People walking up downhill mountain bike trails.
5206	Have had issues with personal dog walkers. But nothing outrageous.
5211	A large group of probably 15 people, kids and their parents. Walking down a very high speed trail (boogie nights) and me and my friend almost hit them. When we confronted one of the parents about it being a mountain bike trail they responded with "I ride this trail too believe it or not".
5226	None
5236	Hikers think that they have the priority going uphill and get mad when you come down the trail and don't get off your bike
5241	Folks walking on biking trails
5251	Everyone is understanding of multi use trails
5266	Off leash dogs, hikers walking down/up mountain biking only/primary trails.
5271	I have never run in to any horse riders and usually hikers and dog walkers are nice enough to give me space to pass safely
5276	Hikers walking on MTB-specific trails (Boogie Nights, for example)
5281	Told going too fast / appear without alerting
5286	As a mountain bike I see other types of trail users all the time. I always slow down to pass/cross other users. I don't want to startle anyone or their dogs. Always say hi. It's not hard to be nice and help us all get along.
5301	Barking dogs as one goes running or biking, crowded trails
5306	Honestly I rarely have conflicts with any other user groups. Sometimes hikers/walkers are walking up bike-primary trails and are startled by mountain bikers, but I tend to be watching for people and haven't really had a problem.
5321	Unexpectedly coming upon hikers (while biking) who are climbing up downhill mountain bike trails
5331	Dog walkers not cleaning up after their pets and not keeping them on a leash.
5341	dogs being aggressive/too "friendly"
5381	Aggressive dogs off leash. Dogs staying in the middle of bike trails (owners keeping their dogs in the middle of the bike trails)
5396	Dogs barking and acting aggressively Horses being uncomfortable around runners

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

5416	Bikers good too fast on the Bridal Path.
5431	Cyclists coming up behind you without notification. My husband was surprised last week and tripped and his ankle still hurts.
	Many people, especially visitors to the area seem unaware off leash dogs are allowed. We have so few places left to enjoy with our dogs, it sucks to be accosted because someone just doesn't like it and doesn't know. More signage would help a lot.
5436	Bitten by an off leash dog and the owner was hostile about it
5451	Off-leash dogs not in control can be a significant hazard. The only clash I ever have with hikers is on high-speed designated downhill MTB trails, that is dangerous for all involved and usually the result of lack of knowledge of the area and lack of clear signage at the bottom of a trail. Otherwise, I find being respectful to others gets returned in kind.
5456	In my experience everybody using the trail network is friendly, courteous and patient with all types of trail users.
5461	Find most trail users very friendly and accomodating
5486	Rare, minor, negative experiences with dogs, but for the most part it's great
5501	Some of the commercial dog walkers don't have very good control of their dogs.....but there are lots that are great
5516	Commercial dog walkers with multiple dogs off leash.
5521	Trail users are very respectful. I have never had a conflict in 8 years of riding.
5531	Professional dog walkers tend to take over the trails at certain times, with mass packs of dogs— sometimes with no control. This can present a danger to those of us with leashed dogs. I would love to see some parameters around the number of dogs a walker can legally take at a time
5536	Dog walkers/dogs on trails where sometimes dogs are loose and can potentially run into them Have encountered walkers/hikers/joggers' walking against flow of trail, eg, up Good Sir Martin, up/down John Deer, up/down Asian Adonis
5606	Commercial dog walkers never have dogs under control. People walking their own personal dog either on leash or off are MUCH more responsible & have their dogs under control.
5611	Dogs attacks bikers. From time to time
5621	Have been biking Seymour for 15 years and have never experienced conflicts with other trail users. I find most bikers to be polite and courteous and generally yield to hikers/other bikers.
5626	As a mountain biker, I have had pleasant encounters with hikers and dog walkers. I have never encountered anyone riding a horse.
5646	I've never had an issue with any of these, I'm respectful on the trails and I find most people are as well. During the start of COVID I didn't like how busy the trails got but I understood people need access.
5651	Mountain bikers illegal park, ride down the road, start building illegally , drinking in the parking lot. Mountain bikers are the most problematic at mount Seymour and the most aggressive
5656	There are a few too many commercial dog walkers in my opinion. When I encounter these groups of dogs, my dog gets scared and runs home. I have to walk my dog earlier in the day to avoid these groups.
5666	Don't have conflicts or see why I would have conflicts with walkers/hikes and mountain bikers. Have had conflicts with horse where they get spooked or are not controlled by their rider, but have no run into them on Seymour. Where dogs have been off leash or poorly behaved they have been aggressive towards people and other dogs.
5676	Everyone is generally respectful of others. Especially mount as in bikers who usually always greet hikers with a smile!
5681	none
5696	Typically walkers or inexperienced riders standing in locations where there is poor visibility or it is challenging to stop safely.
5701	Interactions are friendly
5711	Hikers on bike trails
5716	occasional walker with ear phones not hearing my bell and they are startled often dog poo on trails, beside trails, in little bags, in my tires, etc.... occasional off leash dog lunging at tires or ankles (playing not trying to injure) occasional high speed mtber passing without respect especially when riding with my young kids
5731	I can't imagine getting into a conflict on a trail... what could you possibly have to bicker about in passing on the side of a mountain??
5736	Horse people just yell at cyclists for no reason. Most people are reasonable but I'm over being

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	<p>treated like trash by other classes of trail users just because I'm on a mountain bike. WHO DO YOU THINK DOES ALL THE TRAIL MAINTENANCE???!?!? I have to pick up my dog's shit, horse owners should have to pick up their horse's shit. Don't like it? Move to Southlands. Can't afford Southlands? SUCKS TO BE POOR, TIME TO SELL YOUR HORSE.</p>
5746	In my experience trail users in this region are courteous to each other, and consistently make efforts to share the trails across different user groups.
5751	Rarely, mostly passing each other on multi-use sections of trail with confusion around yielding etiquette
5771	Most times hikers or bikers don't pay enough attention
5796	Walking on mtb trails. Horse poop.
5801	Everyone has been great in the last year that I have started.
5821	<p>Some people don't follow trail etiquette and give way where they should, some groups don't fall into single file (while my group is). Worse during other pandemic times when trails were busier and people were unaware of etiquette.</p> <p>Some dog walkers don't keep proper eye on their dogs when they are off leash. Not everyone wants to have a dog come up to them.</p>
	Most are good though.
5826	Some high use areas can get crowded and at times no one knows who has the right of way.
5831	For the most part, people are quite courteous. The only situation that I encounter that I find dangerous is when I am going high speed downhill mountain biking and a hiker is coming up the trail. This is an unsafe situation for both of us.
5851	I just do my best to share the trails patiently.
5861	I wouldn't call any of them conflicts, but there's a need to work around other users in the same space. I've only ever experienced courtesy from other users, and offer the same.
5866	Mostly just people who have dogs off leash or are taking up the entire width of the trail (mostly Baden Powell)
5881	As a mountain biker, the most conflicts I have are with other mountain bikers. Typically it comes down to lack of knowledge on trail etiquette, but sometimes some mountain bikers are entitled assholes.
5886	People are almost all pleasant if not polite. The only ride behaviour/conflicts I've witnessed have been with (some not all) e-bikers who tend to bully through climb trails
5906	Sometimes run into hikers along Bridal Path
5911	I personally endeavor to be a considerate trail user by giving wide berths to horses, advanced notice of my approach (especially from behind), slow my pace when passing, & always give a "thanks" & "have a great outing". Conflicts most often involve dogs & their person (whether they're walkers/hikers/runners/bikers) whereby dogs are not controlled (imped your progress, jump on you, etc) or where people don't pick up after them.
5921	Thinking across the literal thousand of interactions I've had with different trail users group while engaging in different activities myself, the worst I've had is someone not say hi back when we pass. I think it is such a personally driven response i.e give respect and get respect
5926	<p>Dog poop on the trails.</p> <p>Non commercial dog walking with unruly dogs off leash. Most dogs are wonderful but a few that do not listen to owners are rotten and jump up on people or try to herd us.</p>
5931	People from different activities often respect each others spaces within the mountain trails
5946	Everyone has been respectful towards each other in my experience.
5951	Almost all interactions have been pleasant. If I'm aware of hikers/walkers/dog walkers I do my best to slow down and give space, and they do too. Some minor conflicts years ago with people that aren't tolerant of others using the trails.
5961	Most users seem very accustomed to multi use trails. I have seen no real conflict in 9 years of riding these trails.
	More signage to explain what a trail's primary purpose is might help with safety.
	Personally I always yield to hikers/walkers, but some are taking a risk walking up trails that are downhill bike primarily.
	Ie, this is a high speed downhill mtb trail. Consider walking up another trail or be aware of downhill traffic.
5996	Never had any issues with other trail users.
6001	Often walkers hike the down hill only trails, it's incredibly dangerous. Dog walkers (commercial) often have a few dogs, they just get in the way.
6016	<p>I can't think of any conflict I have ever had or seen in this area over 16 years of using it.</p> <p>People are either quiet or friendly and always courteous.</p>
6031	I've had good interactions with all user groups. Hikers, bikers, dog walkers. Have never seen

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	an equestrian.
6036	People typically make room for each other on trails. I have never seen someone on a horse on any of these trails.
6041	Mostly fellow bikers on trails.
6046	Dogs off leash with walkers can jump on you while running. Strangely, I haven't had an issue with dogs running with mountain bikers.
6051	i come across all but Equestrian and have never had issues as i try to be, and people i come across are always polite and courteous and seem to be just enjoying their time in the woods.
6056	Hikers leaving garbage & making trails dangerous by standing right in the roll out on Dh sections and refusing to move.. Dog walkers and horses not dealing with the poop they create or leaving plastic bags of dog poo everywhere.
6076	Hikers walking up high speed downhill bike primarily trails
	Mountain bikers biking up downhill only trails
	Poor signage/understanding
6101	Everyone on the trails I have ever encountered is very friendly and even helpful when asked about the trails.
6106	Minor conflicts regarding trail use and reminding fellow users of best practices. Mostly other users hiking/riding with amplified music (i.e. bluetooth speaker).
6116	Everyone is friendly and understand how to compose themselves in a shared trail network.
6131	In the past 15 years of using these trails have never had ANY conflicts, and only great positive experiences with other trail users! I trail run, hike with kids and dogs, and mountain bike and I find all users are super respectful and friendly with others!!
6141	Trail users are generally courteous and happy to see others out enjoying the area.
6156	I have never had conflicts on the trail. For the most part users have been courteous and responsible. Occasionally someone will be a little inconsiderate about making space, but that's not common. No angry moments.
6166	Mountain bikers bombing down too fast and not adequate enough space to jump to the side of the trail. Especially on BP and Bridal
6186	None. 100% positive interaction with all other users
6191	I never have seen any horses on these trails in the 20 years I've been using them. Hikers and Bikers are usually only a conflict if there are large groups that are not considering others looking to pass them on the trail.
6201	always been respectful but sometime it's challenging especially on old buck where mountain bikers and pedestrian / trail are on the same, tiny gravel path
6206	Hikers walking up downhill mountain bike trails
6216	Everyone seems pretty chill to me. I usually yield to other trail users
6221	Many mountain bikers do not yield and often pass dangerously. They also ride hiking only trails.
6231	Dogs off leash
6246	Lots of hikers don't realize the dangers in blocking downhill bikers on steep technical terrain
6251	Sometimes dog walkers and walkers are coming up downhill mountain bike trails.
6256	Some mountain bikers that are faster zoom by you on the trail or don't leave enough space before they start to go down.
6291	Off leash dogs are occasionally an issue.
	Generally I think there should be more bike only trails and more hiking only trails. Single use trails are important. I especially think high speed bike trails should not have hikers on them.
6306	Mostly friendly faces
6321	It would be good to "zone" some trails for hikers only and maybe some for bikers only
6326	NA
6331	Dogs off-leash and family hikers, with young kids, in designated mountain bike trails can sometimes show up unexpectedly, no real conflict, more concerned that I could hit a pet or child by accident.
6341	I find trail users or all kinds generally to be courteous
6346	Basically people walking up downhill trails
	While on my bike.
6381	I have never had a conflict with anyone on the trails.
6396	Almost everyone I meet is courteous and respectful.
6401	N/A
6406	Not necessarily conflicts but things to be mindful of
6421	All good, never seen a horse up there though! Mostly people are curious and move out the way
6426	Only real conflicts are hikers and runners who are ascending trails that are high speed MTB

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	descent trails. That is a dangerous situation that could be resolved with some signage at the bottom of those trails.
6436	Sometimes walkers on mountain bike only trails. Sometimes slow mountain bikers don't pull over. Never has the conflict had any sort of escalation- just annoying but only a small amount of the time
6441	There have been multiple times a hiker/dog walker has been waking uphill on a high speed downhill primary mountain bike trail. when politely asked not to walk up these trails as it's dangerous for both people the walkers have given serious attitude to us and clearly don't understand just high risky a collision could be
6446	I have never had a conflict with anyone on the trails.
6451	I've never seen horses, and never had any conflicts with any other user types.
6456	Have never had conflict
6461	Everyone I meet is between neutral and friendly. Honestly can't think of any conflict I've every had over nearly 20 years on Seymour
6471	Rouge off leash dogs. General etiquette issues like right of way or slowing down with passing. Could be solved with signage at trail heads
6476	Occasional dog conflicts. Occasionally bikers ride too fast and out of control but they generally great.
6486	Walkers are lost and walking up the downhill bike trails. This can be very dangerous.
6496	Rarely have conflicts, always stay on the trails intended for biking
6536	I never have any conflicts. I find most people to be courteous to each other while enjoying the trails. I have never seen an equestrian rider on any of the trails in my many years of use.
6546	Conflicts with off-leash dogs when they're not under control by the owners.
6566	Everyone I've encountered has been friendly.
6571	Everyone is usually very nice and respectful. I have come across hiker's a couple of times on trail's for mountain biking due to lack of sign's or very small printing on the signs. This can be very very dangerous for numerous reasons and for both parties.
6576	People are generally very happy when out on the trails. I have never experienced conflict while on them.
6586	Hikers walking on downhill mountain bike only trails
6596	They're great no conflict its fine
6601	It feels pretty respectful. Sometimes you catch up to someone hiking down a fast trail and it can be startling, but generally no issues with other trail users.
	E-bikers blasting up the climb routes is annoying though. I don't like having to pull over/pause my climb because someone had more money to strap a motor to their bike. I feel like they should use the road.
6626	Everyone seems very polite and happy to share the trails!
6636	Hikers going up on mountain bike trails.
6646	People are generally very accommodating of others. Occasionally you will find a grumpy walker that seems to resent bikers
6656	Everyone is usually friendly and respectful of others on the trails. Etc dog walkers or hikers usually step to the sides when mountain bikers pass by.
6661	Hikers walking up mtb primary dh trails.
6671	I come across hikers on mtb trails on occasion but it has never been problematic
6691	Not willing to share trails, especially uphill
6696	Conflicts: hikers are also present on trails, so need to be cautious to avoid accidents.
6711	I have not had any encounters with other trail users that constituted conflicts.
6716	I've never had a real conflict with any of these. Off leash dogs have caused confusion a few times.
6721	Dogs not on a leash
6726	As MTB rider passing hikers too fast for their comfort. I make an effort to slow down
6741	Mountain biking trails should be better separated from hiking trails
6751	I have had cases where an off leash dog has interfered with my daughter while she was biking and she crashed.
6766	Some people are rude, and don't share the trails. They could be on a bike, or running, or with their dogs. It is perhaps the nature of people and it rarely happens (10%).
6776	Some people do not adhere to established norms of keeping to right and not being across the breadth of the trail as a group. Dogs on trail during tricky downhill segments on technical down trails is worrisome.
6781	Have been chased, jumped on and knocked over several times by off leash dogs.
6791	Brief interactions where "right of way" is not clear. Nothing of significance though. Never seen Equestrian users.
6796	Hikers - normally say hi/give each other room Bikers - normally say hi/give each other room. Sometimes chat have biked with strangers

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	before.
	Dog walkers - normally say hi/give each other room.
	Equestrian - I've never seen anyone on a horse
6801	I find many dog walkers are hostile to bikers. I am generally very conflict adverse and mild mannered but have had dog walkers say very rude and aggressive things to me. I often encounter dogs off leash and sporadic on the trails which pose a safety risk to bikers.
6806	at times the dog walkers have their dogs off leash and they are going up the trails with no control of their dog, but that is rare. Also, the hikers at times are running up the MTB trails and 95% of the time they are awesome, but some trail runners do not move out of the way when riders are biking down.
6816	Dog walkers sometimes feel that their dog is entitled to the trail first and foremost - at the same time they have no control over their dog. This leads to conflicts. Some mountain bikers do not respect the fact that the trails are multi use and ride in a fashion that they are the primary user and everyone else's use is secondary. Even as another rider, they sometimes do not yield to uphill traffic and pass too closely.
6821	I meet other trail users all the time. I meet bikers when I am walking my dog or running. I meet runners and dog walkers when I am biking. But I never get into what I would describe as a conflict. I find if you don't act like a jerk, other people behave reasonably.
6831	Loose dogs on trails while I am running or riding
6836	Aggressive dog behaviour
	Hikers going up downhill trails with headphones in and not hearing bikes coming
6856	On the weekends, many of the hiking/biking trails are dangerous for hikers because of the large number of downhill mountain bikers.
6866	Hikers and runners with ear buds in clueless to bikers
6871	I usually cycle and try to be respectful of other users. Hikers are generally very understanding
6896	Most users understand trail etiquette, the occasional one doesn't
6901	People have gotten much better at giving right of way, communicating and saying hi. Used to feel as though there was more conflict.
6906	95% of the time mountain bikers are super courteous. Occasionally they are going very fast and it can feel dangerous as a hiker/dog walker
6911	Very minor with dogs, but it's OK!
6941	Never seen a horse in this zone. Sometimes hikers/bikers/dog walkers can just simply be rude ... sometimes mountain bikers don't give right of way to the uphill climber or pass aggressively. I find most bikers are kind but they walk up a trail that is downhill primary and that can be dangerous. I have run into hikers climbing up Empress, Severed etc. Most times as a rider I see hikers on the Baden Powell, old buck & bridle path; need signage
6961	Getting chased by dogs Barking and noisy dogs Dog feces in bags Hikers using MTB downhill trails
6976	Trail runners make the trails dangerous when running up downhill primary mountain bike trails. Ebikes come up on you very quickly and often don't allow you sufficient time to get out of their way. Not to mention they allow people to do three times the amount of laps they normally would, putting three times more wear on the trail.
6996	I have had off leash dogs lunge at me on the trail. Once a dog knocked me off my feet.
7026	I rarely have any issue, A dirty look from a walker or an Emountain biker lacking trail etiquette.
7031	Dog bites
7036	Bags of dog poo left on the trails
7041	Dogs usually off leash.
7056	Never. Everyone polite always. Not one incident
7066	It has always been a happy and welcoming part of the forest in my experience, runners, hikers and mountain bikers all have been polite and enjoying the beautiful trails
7071	Some Mountain bikers going way too fast to stop safely. They're not in control. They're not expecting runners on the trails.
	Dog walkers- dogs being off leash and not under control. Poop bags being left on trails.
7076	Sometimes walkers/hikers on mountain bike trails.
7086	I believe that everyone is pretty respectful who uses this area.
7101	Off-leash dogs and those not under control of their owner/walker are irresponsible and inconsiderate hazards, as are dog feces littering the trail or dog waste baggies lining the trail or discarded in the forest. One need only go to Cobble Hill to see how annoying it is to dodge horse shit, either hiking or biking. Survey trail maintenance participants to see which user group comes out the most. Charge commercial users (ie. dog-walkers) a fee.
7106	Hiker's playing music on speakers.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	Mountain Biker's expressing trails specifically listed as hiking trails are entirely theirs to use.
7116	Dogs walker having their dogs off leash
7121	While every now and then, you hear about conflicts between types of trail users, all of my interactions have always been polite and are very often very friendly. Dog walkers say hello, mountain bikers communicate how many in the group and thank us if we step aside, or tell us to go ahead...
7131	Interaction is usually polite, biking without proper notification or large groups.
7136	Mountain bikes, electric and pedal, travelling WAY TOO FAST
7146	I've found mountain bikers aggressive in other areas but in this area we all get along :)
7161	I find people are reasonably well behaved. If i encounter hikers while riding i slow down and give them the right of way. Likewise when i am running
7166	Dog owners/walkers not picking up after their dogs. People who use the trails leaving behind garbage
7171	Almost everyone is pretty nice
7181	Generally find most other users friendly and accommodating. Occasionally find a dog walker with a dog not under control. Personal fear of dogs makes these encounters unpleasant if the dog runs at me or barks in a manner I interpret as aggressive.
7191	Walker and bikes on same path need to be wide so bikers can pass. Main bike trails down are dangerous for walkers. Bikes can't see walkers in time to slow and walkers have little time to move aside.
7216	I find most people friendly to each other on the trails. Perhaps, sometimes people may not be friendly but cordial.
7226	One commercial dog walker who has No control. Mountain bikers who are out of control on downhills.
7231	Commercial dog walkers without control over the pack of dogs they are walking. Aggressive mountain bikers riding downhill at too high speed demanding the entire trail.
7241	I have been lucky, everyone is friendly to me.
7246	The total size/length of the trail system and most trails being directional/one-way seems to mitigate conflicts between riders. Have not experienced any conflicts with hikers or equestrians
7276	Only an issue sometimes on trails with shared use..between mtbikers and hikers/dog walkers
7281	Dogs not leashed/properly controlled
7286	At times fast descending mountain bikers can be unfriendly/dangerous and provide a hazard to hikers as well as trail runners. The etiquette for trail use by different trail user groups appears to differ and these discussions best happen so all can equally enjoy the trails and all times.
7291	Very minimal conflicts, maybe bikers not giving notice that they are coming up behind, giving time for me (and dog) to get off trail
7316	No conflicts - happy to be accommodating and most others are too.
7326	I have had no conflicts on the trails.
7331	Bikes too fast
7336	commercial dog walkers sometimes do not have full control of all dogs
7346	I never had any conflict.
7351	Generally no conflicts experienced.
7361	I have a puppy I'm training on leash. I also often go out on the trails with my young child and the dogs. It's amazing to me how many other dog owners pet my puppy or allow their dogs to socialize with mine when I clearly have my hands full, and they do not ask first. Fortunately, my dog is learning not to respond to them and to keep moving with me, or to stay out with me.
7371	Anybody can be an asshole regardless of what activity they are doing.
7376	Dog walkers with several dogs off leash, I have been jumped up on by unleashed dogs. Dog waste on the trails that hasn't been picked up.
7391	Dogs not under control. Constantly being sniffed, jumped on, circle around me ("they're just being friendly!") And, I'm not scared of dogs but have been knocked down flat on my back by my exuberant dogs which shouldn't happen.
7411	Occasional aggressive dogs.
7416	Commercial dog walkers are the worst, aggressive dogs in packs and off leash
7421	Most trail users have great etiquette and clearly communicate with one another so even if the trails are busy with different users, I find most people make an effort to maintain harmony.
7426	Dogs with no trail sense or recall and dog walkers not taking responsibility for those dogs in their care. I truly believe its the non-commercial dog walkers that are just trying to enjoy their day with their untrained dogs that end up in conflict. Also people not paying attention to the directional arrows on trails or if they are mtn. bike only. Most people are very respectful but it's the new trail users/insta stars that get in the way.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

7431	I've never seen a horse and can't imagine it possible to ride one through these trails? Only problems I've ever had was off leash dogs and people not picking up their dogs waste
7446	Dog Walkers: Occasional off leash dogs Hikers: Occasionally come up on trail runners with earbuds in who don't hear me asking to pass. Rare large hiking groups who don't allow a bike to pass Bikers: Occasional people who stop in the middle of a descent trail.
7451	People seem to respect all users
7461	Some off-leash dogs (and some on-leash) go bananas. 99% of them are fine, and if something happens the owners are usually very good but every once in a while... mostly the off-leash dogs owners (with dogs that go bananas) try and talk to you as if you did something wrong or their barking (at you) dog is not a threat. That is not okay. What if someone is afraid of dogs?
7466	I've noticed walkers and bikers creating new (in my view) unnecessary trails that act as short cuts, or duplicate existing trails.
7491	Bikers have always been receptive of other users on the trail.
7511	Off-leash dogs not habituated to other trail users--barking, or stiffening in alert as you approach. No issues with hikers or bikers. I've encountered no horses in this area.
7546	Some Mountain Bikers believe they should have exclusive use of some trails. They don't.
7551	There are conflicts with commercial dog walkers. Some of the trails are narrow. Some of the commercial outfits are great and move their dogs to the side, others are not so good and I've almost been bit.
7561	Over the years only 2 incidents with dog walkers not managing their dog ..
7576	Everyone is very respectful of everyone else
7581	The only potential problem is mountain bikers going downhill quickly but you can almost always hear them coming and step off the trail to let them by. They are usually friendly and appreciative of this.
7601	-Confusion on what trails are shared and what trails are mountain bike exclusive. -Unleashed dogs, as part of a commercial operation, charging me.
7606	I have not had any conflict with any of the the above mentioned trail users. I have had non-confrontational conflict (more like discussions) with local neighbors about parking (Hyannis Point). Basically, they claim trail users are taking street parking from them. The City of North Vancouver has sided with them and limited parking to locals/permits despite not providing allowances for handicapped parking. I question the legality.
7621	Too many off leash dog walkers. Funny how I'm the only person the dog has jump at or growled at.
7631	Commercial dog walkers with too many dogs to control. Sometimes mountain bikers are not courteous when I step aside to let them pass. I don't have to let them pass.
7636	Dogs get in the way of the bikers and sometimes the hikers are on the wrong mountain bike trails
7641	Hikers/walkers have occasionally complained about trail runners in groups taking up too much space.
7646	Mountain bikers, especially since Covid, dominate all the trails. They move very fast, often silently, and recent trail runners and hikers on the trails. There is no equal division of the trails - the vast majority of trails are "mountain bike trails" and they have even taken over hiking trails like Baden Powell - not only as a connector trail but they will also fly down the BP. There should be an equal number of trails for runners/hikers.
7651	Off leash dogs not under control of owners or commercial dog walker, poop bags left on side of trail and not picked up by owners. Speed of mountain bikers, riding in an unsafe/careless manner, environmental damage as bikers create new trails.
7676	They are ok
7681	I feel like after a number of years of 'growing pains' about each others' needs, most users have grown to accept and better understand the multi-use nature of these trails and to respect them. As a trail runner, I know when to step off the trail to allow mountain bikers to pass, and similarly they are almost always respectful in calling out how many there are in their group. I love seeing dogs and horses out there and find it adds to the experien
7686	I think overall most people are good and give way as necessary
7691	Respectful users
7696	Always say "hi" to let others know you're there and there are rarely problems with people. Dogs are mostly fine, but groups of dogs not so much
7701	Someones's its a challenge when the trail gets crowded with the bikers and dog walkers
7726	Lack of experience from other bikers and safety measures has occasionally been an issue ie

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	stopping in dangerous spots on the trail and just not knowing what to do.
7736	In 21 years, I've only had a conflict once. It was to do with the bikers travelling too fast and my dog was hit (and the biker was mad). Signs to be considerate of other trail users might be useful. There are still some bikers that travel too fast around people and dogs, but on the whole most are good.
7761	Once tried to avoid a dog while downhill Mnt biking and hit a Boulder instead of the dog and broke both my arms and both thumbs
7766	Sometimes trail hikers on Baden Powell stop look into my back yard. Sometime see dog poop bags on trail.
7771	The odd not so well behaved dog encounter.
7786	In general I believe the vast majority of trail users are polite and give others space to enjoy the trails.
7791	People having issues with dogs off leash in dog off leash areas. Horse excrement.
	If you make more trails offleash and provide ample signage, people are less likely to have their dogs off leash where they're not suppose to. Vast majority of dogs on hikes are under control while offleash, in vast contrast to children on some of these trails wantonly destroying nature.
7801	hikers thinking they have right of way on mountain bike trails or sating that the trails are "theirs"
7806	Unleased aggressive dogs.
7811	None
7831	Walkers on bike downhill trails - other bikers overly aggressive riding
7841	Dogs off leash can be an issue. The volume of mountain bikers can be an issue. However, incidents are isolated and generally all users are respectful
7851	Dogs off-leash and not under control - biting at my ankles, or lunging at my dogs. These are often from new dog owners or commercial dog walkers. I've been chased multiple times by commercial dog walkers with animals off-leash. Hikers/walkers are surprisingly oblivious to things happening around them or to basic trail etiquette. I always announce my presence, but they startle even after I call "coming up from behind", "passing on your left", etc.
7856	Mostly unleashed dogs on primary mountain bike trails - it's dangerous for me and the animal. I've been charged several times - it's just the dogs are wondering, some are out of control and a danger to the public.
7866	I use these trails multiple times a week as a local resident, in the form of trail running, family walking and mountain biking. I have experienced very few conflicts between different trail users. The few conflicts are off-leash dogs jumping up/running after other users (runners, bikers and hikers). The majority of litter I see on the trail is dog poo bags le, and/or dog feces.
7891	Interactions between different users if these trails are always positive.
7906	Usually people are mindful to watch at narrow points and move off to the side.
7931	No issues
7941	Sometimes hikers are walking up a downhill-only mountain bike trail. This has caused some close calls, even as a cautious rider. Trails are bushy and sometimes with tight corners. There is no reason for hikers to walk up a downhill trail when there are so many bi-directional or uphill trails to choose from. (Can confirm as I do walk my dog here as well).
7951	Hikers fail to yield even after letting them know you are coming up behind them.
7966	I enjoy meeting other users
	I slow right down and say hello to avoid any conflicts
	Never had an issue in many years
	People hiking UP the Bottletop trail is a problem, as bikers are coming down with speed and the hikers are not expecting them.
7971	Generally, it involves users travelling uphill and not being aware that high speed mountain bikes will be descending.
7976	Many new users, of all types, could be more polite about sharing the trails. Biggest issue is uncontrolled dogs and dog-poo left on trails.
7986	I have no issue sharing the trails whatsoever
7991	Difficulty passing on narrow multidirectional trails with blind corners. Bridle path especially since it's a main artery and used by all different trail users. Uncontrolled dogs also
7996	You have to be mountain bike aware, which can be a challenge/limits ability to trail run, but I've never had a conflict with any individual related to this
8001	Dog Walkers - unleashed dogs running towards/chasing me. It's not usually anything serious

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	but can be dangerous at times and usually requires me to stop my activity until the dog is called back.
8016	-Dogs off leash running after me, I've been bitten twice. -Hikers lost not knowing where they are.
8021	very rare, but have encountered hikers not aware they are on a mountain bike trail, once picnicking in the middle of Pangor!
8046	Dogs (especially on downhill mtb trails) that aren't trained well enough to behave safely around bikes
8056	There is no defined category for ebikes. That is why I selected Mountain bikes - this is a problem- ebikes are motorized vehicles- trails are not engineered for their repeated trips, heavier wt and torque. These are NOT mountain bikes- there needs to be different trails for ebikes. I am not saying there is not a place for them- but NOT on MOUNTAIN BIKE trails. commercial dog walkers with too many dogs and not cleaning up.
8066	Dogs not on leash can cause issues with bikers
8081	I see lots of hikers, dog walker and mountain bikers on the trails but generally everyone makes room for each other and there are rarely any conflicts.
8091	No issues with any groups. Trails are meant to be shared for all
8106	Everyone mostly gets on fine. The problem is that there are so many people using the trails now it is putting more pressure on the trails.
8121	walkers coming up bike only trails without proper safety protocols. Being aware that bikers may not see them
8136	Everyone is generally quite cordial and polite.
8146	I haven't had any conflicts
8151	Sometimes I encounter hikers and dogs going up MTB trails. This can be dangerous for both groups.
8156	As hiking with the family of kids we often encounter scary dogs that are not in control. either big dogs that come close or dogs that are threatening (barking, growling...). I wish dog walkers would be more in control of their dogs. Also they leave so much dog shit on the side of the trail it is disgusting.
8166	Always had a very pleasant interaction with all other trail users. Never once encountered an equestrian but I assume it would be no problem
8176	people are very courteous to eachother on the trails.
8191	People walking up a mountain biking trail. It's extremely dangerous for all parties. They don't know how quickly bikes can descend on a trail.
8206	I've never had a negative interaction with another trail user. When I'm on my bike and see someone else I will slow down until we both see each other and know what we have to do.
8216	Dogs off-lease attacking me and irresponsible owners. Other mountain bikers having poor trail etiquette.
8221	In my experience, conflict has always been pretty rare on the trails. I find that trail users are mostly courteous to each other, regardless of activity. I'd separate e-bikes as a unique activity type. If it were listed, I would pick Sometimes/Often for ebikes, and conflicts becoming more frequent.
8226	Most people that use the trails are respectful and polite.
8231	Almost everyone is friendly and/or don't mind me riding (slowly) by
8236	All good, no conflicts
8241	When I do see other users I make sure to stop and get out of their way if we are going in opposing directions. If they are ahead of me and I wish to pass I give plenty of notice and am polite.
8246	People on foot walking on advanced MTB trails
8251	Usually professional dog walkers who do not have the numerous animals under control. I always stop or slow down and am respectful, but especially with a large group of dogs, they can get agitated and the walker does not have control over them.
8261	Occasional unpleasant verbal exchanges
8266	One way trails are great!
8276	None. Good experience with others
8281	Walkers on mountain bike trails
8291	Some people do not follow established trail etiquette- whether walking, biking or in group situations
8296	Out of control dogs. Hikers on biking only trails. Generally a great experience, very few conflicts.
8306	Never have any conflicts on the trail one of the best things about the North Shore.
8321	Sometimes people with off leash dogs get nervous around mountain bikers. Having a dog myself, I am always cautious around them, but some bikers go pretty quickly so I can see how it can be unnerving.
8326	Have encountered walkers, trail runners, dog walkers and mountain bikers. No horses

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	though. Generally, saying hi or ceding trail has avoided any conflicts.
8336	Hikers/walkers walking the width of the trail, hikers/walkers using ear buds and unable to hear when asking for space to pass, dog walkers with poorly behaved dogs off leash (chasing, barking, lunging)
8351	The vast majority of users, covering the full range of activities, are respectful. We understand that we are all out having fun doing our activity of choice. In the past some commercial dog walkers have been less fully aware of their responsibility within the community of users, but over the past few years this has NOT been an issue.
8356	It tends to be hikers who don't like mountain bikers. (Bikism?) Otherwise it is off leash dogs either running in front of moving bikes or barking.
8366	I have never had an interaction that I would describe as a "conflict" with any user group at CMHC, though I frequently encounter hikers and other bikers.
	Have never seen equestrians on the trails I use
8371	Riding MTB on these trails since the mid 80s. Never have I experienced a conflict of any kind with any user
8376	No horses encountered. Most are respectful; rarely issues
8381	Can't remember ever having a conflict with another trail user
8391	Shared paths working well. Hikers super friendly to mtbers and generally yield (though riders should yield to hikers)
8396	Right of way issues
8421	I've never run into anyone on a horse, but if I did I'd imagine it would be difficult for us to avoid one another (ie: hard for both of us to step off the trail). Hikers and dogs are both fine, and I'm a mountain biker myself (so they're fine too).
8441	Some hikers do get scared of mountain bikers coming down fast on trails.
8446	In my experience trail users in general (regardless of preferred activity) are very respectful and recognize the need to share the trails in order for everyone to enjoy them safely
8451	I ride mtb weekly and have never had a negative experience with other user groups.
8456	Commercial dog walkers letting their dogs off leash and them barking aggressively. Also insane amount of dog poop that is on the trails. My daughter's always step in poo since or my bike tires seems to find it as well. Dogs are my only problem trail users.
8461	We often see other mountain bike riders, hikers and trail runners. Some with dogs. Never had any conflicts. Sometimes does get rather busy around the parking areas, but thins out further up the mountain.
8466	People are pretty great.
8491	Dog walkers who can't control there clients, both commercial and owners
8496	Biggest problem was commercial dog walkers having dogs off leash and not calling them when I was trying to pass. Many of the dogs are large and intimidating.
8511	Mostly hearing a dog walker say, 'oh he/she doesn't like bikes" as a dog barks at us. Sometimes ebike riders (typically new riders) don't treat other trail users with respect.
8516	Occasional dog off lease and barking Bikers very considerate
8521	Off leash dogs are a constant and dangerous problem. Sadly, even some mountain bikers ride with their dogs off leash, despite signage that states dogs must be leashed.
8531	Hikers using the Empress bypass downhill trail as they walk up the mountain biking only trail.
	Packs of trail runners that don't make way for others
	Mountain bikers that park in group in the middle,of the trail making it hard to safely pass
8536	Aggressive dogs scaring my kids!
8541	Lots of interactions with other groups (although don't think I've ever seems a horse), but I'm always smiley and pleasant and they are in return.
8556	Unleashed dogs getting in your way
8566	Dog walkers often let their pets run wild with no control. Getting barked at, jumped on (and muddied), growled at, snarled at, and scratched are regular occurrences. It's frustrating. As are all the poop bags left by dog owners.
	Once upon a time mountain bikers were the bain of trail users. They've really done a great job of creating a better culture of mutual respect. It would be so nice if dog owners did too but I don't see that happening.
8586	People that aren't trail educated walk, bike, and do everything so it's not a discipline i'm targeting, it's an uninformed mountain culture.
8591	EBikers can sometimes be rude or obnoxious on uphills
8596	We know some trails have MTB, so we just need to be aware and careful to not block the way

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	and avoid the downhill MTB trails.
8601	Usually get little warning of a mountain biker especially if they're coming from behind and have to jump to get off the trail. Dog walkers - just the usual "He's friendly" as they jump up on you which I find scary.
8606	Difficulty passing on narrow trails. Hikers walking on downhill bike trails
8611	Trail sharing issues but rarely
8626	Sometimes dog walkers and/or walkers and hikers are slow to move off the trails to make way for mountain bikers. Info signs at the start of trail heads might be nice - like "trail etiquette".
8631	I have not experienced conflicts when I use the trails.
8641	conflicts are fairly rare but not to say this isn't an important area to consider.
8661	are horses really suitable for the area considering current levels of foot traffic and bike traffic? Other mountain bikers (often newer bikers) do not follow etiquette of allowing faster riders to pass and will often stop mid trail. E-bikers will often pass on flat sections of trail but will be unable to maintain lead on technical sections, resulting in leap frogging.
8671	Dogs chasing me rarely
8681	Everyone is friendly out there!
8691	Cohabitation is going well I think with other people.
8701	I had never had any conflicts on the trails
8726	We do not have enough mountain bike trails, especially ones that are accessible for new riders. Of the few trails we do have, they are not adequately maintained.
8731	Dogs not under control in off leash areas. Owners/walkers allowing dogs to approach close to hikers and say, 'It's OK they're friendly.' This is not a dog under control. I have no problem with dogs off leash, but not when they approach me.
8746	Most people are courteous and respectful of other people's space - stopping, stepping a side and let faster ones go ahead.
8751	Everyone seems to get along
8761	Very occasionally groups of walkers are stopped in middle of trails.
8766	Watching for bikes or hearing them is a huge problem.
8786	Dog walkers like to leave their dogs off leash and let their dogs run on high speed mountain bike specific trails and then yell at mountain bikers for going too fast, most hikers like to act like they own the mountain but there no such thing as the north shore hiking association that maintains and builds trails.
8791	Lots of room for all users
8806	Respect to all trail users is reciprocated
8811	Professional dog walkers with too many dogs or dogs that are out of control. Hikers who are utilizing trails not appropriate or safe for hiking and not paying attention to their surroundings. Large groups of mountain bikers - as many as 25 riders in one group.
8821	Trail users are generally courteous and step aside or allow others to pass. Bikers are usually the same, but their speed can make it a little trickier.
8826	I bike very often and I never had any conflicts. I always say "Hi" or "Thank you" to the walkers/hickers
8836	sometimes the mountain bikers come down pretty fast
8841	In 30+ years of using the trails I've never had a significant conflict with other trail users or wildlife
8861	Everyone I've met on trail has been courteous and friendly.
8866	Generally, people are very respectful who use the trails.
8876	I think people are very respectful for the most part, occasionally some dog walkers allow their dogs free rein and they interfere with walking (or come up to you), or interfere with bikes
8881	Dogs running up and jumping on me/my children, usually off leash. Also commercial dog walkers. Bikers should have a bell and use it when approaching hikers.
8886	Never saw a horse on the trails. Commercial dog walkers often have no control over the pack of dogs, whose behaviour is mixed and compounded by number of dogs, and the same applies to individual dog walkers (dogs growl, bark, or jump on us or our children). Some bikers really go too fast on the shared hiking trails like bridal path.
8896	I see other trail users but everyone is respectful and yields when necessary.
8911	Everyone is respectful of one another's activities. I've only had good experiences.
8916	i have been biking, running and walking with my family on these trails for 6 years, and only witnessed one conflict between a rude biker yelling at a group of dog walkers. the other thousands of encounters have been friendly and companionable. I hope any conflicts and complaints are kept in perspective and not given any more weight than they deserve.
8921	Linkers often speed/do not slow down for hikers
8926	Bikes going too fast and not practising etiquette.
8931	Dog walkers can't always control their off leash dogs

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

8946	<p>A few bikers seem to believe that some of the trails are for their use only but we have never seen any signs that indicate that.</p> <p>We do know that Good Sir Martin is uphill only for them, so we only run/hike downhill.</p>
8951	Generally friendly and trail aware in giving way!
8961	Bikers going downhill extremely fast.
8966	We seem to be running into more and more dog walkers. I can see this becoming a problem if the number of Dog Walking Companies is uncontrolled.
8981	N/A
8986	I generally find people very friendly and willing to share the trails. I also try to avoid the really busy times though, like weekends.
9001	<p>Occasionally off leash dogs charge, bark and growl at you. I feel people should have the dogs under complete control or leash them and they should pick up the poop whether its in a bag or not!</p> <p>I wish mountain bikers would ring a bell as we sometimes don't hear them coming behind us. Mostly, the bikers are friendly but we just need to know they are there so we can move to the side and let them go by if they are travelling quickly.</p>
9006	My use varies, and declined during Covid-19, but I cannot think of any conflict in the 25 years that we have used the area. People we have encountered along the way have been engaging, helpful and positive throughout that period.
9016	<p>A number of problems:</p> <ol style="list-style-type: none">1. speed. Some go too fast on trails (especially downhill)2. There are packs of bikers. one or 2 aren't bad but when there are 10 or more it is frustrating.3. The bikers don't announce they are behind you. if they said "on your left" i would move over. I am often startled by them and then they whiz by.4. Sometimes when they are coming down hill i have no where to go.
9021	I have found that the users of the trails on Mount Seymour are friendly and respectful of other people.
9026	Nothing to speak of. Amount of people on the trails makes it too busy. Dogs, people and bikes makes for a busy trail, especially because of covid
9031	Sometimes it's hard to dodge them on the narrower trails. They are almost always quite friendly though but we as hikers end up having to jump off the path as they come speeding by
9051	As I am usually walking with my dog, bikers come up on us very quickly, no notification, or signal...scary the dog, caused her to bolt
9061	My experience has always been that people are respectful of other trail users. I don't like seeing all the Dog poop on the ground or the dog poop bags left on trails, but that hasn't created any interpersonal conflict
9081	People with their dogs off leash on downhill primary trails, insisting they don't need to call their dog because their dog is a 'good' dog. Only to have the dog run in front of my bike, or chase me on my bike.
9101	36 years walking my dogs and never a conflict.. not 1 !
9106	People not understanding the trails are for the hole community not just a chosen few.
9111	my encounters have always been friendly
9131	The hiking trails are often torn up by tge mountain bike users.
9146	<p>Dogs chasing me on my bike, interfering in the middle of the trail</p> <p>Mtb chasing my tail and not being courteous to me/ my kids</p>
9156	<p>Some people have aggressive dogs that go after our meek one. This is a rare event and generally not a concern.</p> <p>Some mountain bikers get upset when hikers are on the downhill trails. This too is a rare event and generally not a concern.</p>
9166	Not really conflict, but bike trails are more dangerous for hikers
9171	Sometimes dog walkers have too many dogs. Not all of them but a few. Most bikers are courteous but some do not give notice and ride too fast for a trail shared with hikers.
9181	just safety and politeness but rare instances
9191	Mountain bikers going downhill on an uphill only trail.
9196	<p>dog walkers / frequently offleash and potential for colission with the dog, and or the dog is aggressive towards me (a rider)</p> <p>other bikers pretty courteous , no real issues</p> <p>equestrian.. never seen a horse on the trails</p> <p>walkers / hikers never had issue unless they are with headphones (they don't hear me announcing my presence behind them) or they are two or three abreast on the wider paths and engaged in themselves not wanting to make space</p>
9201	I've never had an issue personally. I have heard that some residents don't like trail users parking on the street, which I don't understand. I live in the area, and having trail users park on our streets doesn't bother me at all.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

9221	Off-leash dogs running at bicycle. E-bikers approaching and passing (dangerously) without warning (no bell, no verbal).
9226	Trails for All! I find everyone respecting each other on the trails.
9241	Dog walkers whose dogs snap/lunge at mountain bikes :(
9246	Occasionally there are both Inconsiderate dog walkers and aggressive mountain bikers
9251	Not a specific group but disrespectful parking at Hyannis can be a problem (jamming cars where cars don't fit)
9256	The trails are getting more and more crowded with various types of users. Everyone has a right to them. Bikers need to slow down, announce themselves and the number in their group and those with dogs need to control and especially clear their dogs from blocking the trail. Neither walkers nor dog owners have any more right to the trails than bikers. Even if the bikers contribute more time and money and organization to maintenance.
9271	Often when walking with the kids, there are mountain bikes ripping by at high speed.
9276	Most people are respectful. Occasionally unfriendly dogs use the trail and owners are irresponsible. Some dogs should be on leash and muzzled
9286	It's not the nature of the trails, it's the nature of people. Some people feel entitled as hikers or mountain bikers or runners. I'm personally on the trails 4 days a week and my family 7 days a week. The people are good and friendly 99% of the time. Drivers have problems, the trails are really good.
9291	I always try to yield to others and everyone seems to be happy.
9311	Hikers sometimes defecate on or near the trail. They don't pick it up or bury it. We all pick up after our dogs. We need to tell people to pick up after themselves.
9316	Rarely, a commercial dog walker will not have control of an aggressive dog. Everyone typically greets each other in a friendly way. Never had a single conflict in over 10 years
9326	dogs that are not controlled by owners and jump/charge me or poop on trails (and not cleaned up) aggressive mountain bikers who don't warn of their approach and/or run me off the trail
9331	Never have any problems with others when I am mountain biking. People are generally quite polite.
9341	Poor trail etiquette. People braiding trails; asking them not to.
9346	Mountain bikers not alerting that they are coming up fast on shared trails. Dog walkers - dogs off leash in areas they shouldn't be that aren't under strong recall.
9356	It is very rare to have conflicts with other users. I'm in the trails more than 100 days a year.
9361	For the most part, people of all walks seem to have a respect for both the trails and the users. Occasionally, you can tell the odd visitor that isn't familiar with sensible trail etiquette.
9366	Bikers going to fast on trails where hikers are on same trail. Bikers on a rare occasion feel that they own the trail. But 99% of bikers are respectful of hikers.
9376	No conflicts per se - but walkers using the mountain bike primary trails are not always aware of when riders are coming. Dog walkers are not always cognizant of moving their dog off the trail and/or picking up after their dog. The vast majority of encounters with other trail users are positive.
9381	There are never issues with other hikers, they mind their own business and I never encounter equestrian trail users. I have often had problems with dog-owners who do not understand that it is THEIR responsibility to have their dogs under control at all times, whether they are on- or off leash Mountain bikers may occasionally tell you that it is a bike trail when it is not, and do not understand that they do not have priority, share the trails!
9391	Mountain bikers seem to think they can go anywhere they want, even when there is clear signage to dissuade them.
9396	too many dogs, horses leave poop on trails or wreck some of the trails
9401	Groups of bikers blocking trail where a downhill trail intersects with the cross trail usually bridal trail. Walkers and joggers and sometimes slower riders with headphones on can't hear your approach
9416	Knowledge of trail etiquette mitigates conflicts. For example, who has right of way in given scenarios. Education is key!
9421	Commercial dog walkers sometimes don't control the dogs. Mountain bikers sometimes go too fast.
9441	No conflict.
9451	Hikers accidentally on bike trails
9456	While hiking and biking, I have often been barked at, run at, and bitten by dogs off leash not

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	minded by irresponsible owners.
9461	Trail bikers who have no respect for other users.
9466	Occasionally bikers traveling too fast.
	Sometimes people do not have control of their dogs and do not leash them.
9471	Rarely happens, but some bikers appear to be misinformed about hikers' access to certain trails (ie: they complain that we aren't allowed to hike on Pandora, for example.)
9481	Some dog walkers take on too many dogs and can't control them. One time my teen son and I were biking on the CMHC lands and a dog walker yelled at us to slow down because her dogs would run after the bike. Also there can be dog poo bags, or dog poo in trails
9526	Dog walkers may not have all their dogs under control (my dog is a special needs dog), but we never have had a conflict, more that in hyper aware about it.
9531	Generally, I find trail users of whatever type to be cooperative
9541	Walkers/hikers making rude comments. Perhaps lack of knowledge that bikers are allowed on trail
9556	No conflicts
9561	It is common to encounter a conflict with dogs either by a dog walker with 5+ dogs taking up the entire trail (difficult to bike by) or off-leash dogs jumping up to and knocking over our kids while walking.
9566	Been riding here for 10 years, and have consistently had positive interactions with all trail users. Only issues have been with dogs off leash a few times - dangerous dogs (caught off guard or something). Rarely see horses though.
9576	Walkers hiking up mountain bike trails that are one-way (downhill only)
9586	All very friendly and considerate.
9591	Other than having eMTB bikers yelling at me on the way up Old Buck because I take more than a few seconds to move aside, I can't say I've ever had any conflicts. Hikers, walkers, and MTB riders always seem friendly, or at least polite.
9606	Skinny trails for passing
9631	Mountain bikers only because aside from extensive hiking, we also walk our dogs at least twice a day on these trails and while almost always courteous, occasionally we'll come across a mtn biker who thinks they have the sole right to the trail - but that is not often - only reason to mention it is having dogs - well, they don't always agree that they shouldn't be there too!
9636	I have not had any conflicts while in the area.
9641	Too many commercial dog walkers. Often not on leesh. Been nipped at a few times with little concern from owner
9651	No conflicts, all good
9661	I find that all trail users are respectful and share the trail. I've never had a conflict with other trail users.
9666	There are a lot of commercial dog walkers on the trails closest to the trail heads. These people walk up to six dogs at a time most of them off leash. Always at least four off leash which are obviously not under control. These walkers do not always know the character of the dogs they are walking. I have had dogs snarl at me, jump at me trying to bite my hand, get up in my face with their teeth barred growling, one coming at me from behind...
9671	I've never personally had any conflicts. Everyone's been friendly. On the mountain bike primary trails (the majority of them), riders have priority and hikers/runners yield to them (I'm saying this having experienced both perspectives). This may not match up with some rules in parks, but makes the most sense, since hikers can very easily step to the side for 5 seconds while bikers pass.
9686	nothing too major - sometimes commercial dog walkers have many off leash dogs but its never too big of an issue.
9696	I've been mountain biking in the area for about 10 years and haven't really experienced any conflict. For the last 5 years, I've also been orienteering in the area once or twice a year with the Greater Vancouver Orienteering Club, and even with off trail use have never experienced conflict. It is my favourite location in town to do both sports.
9706	Hikers/dog walkers coming up fast downhill trails can be scary! It's rare but it happens. Signage is not great on Seymour
9711	Dogs off leash. Hikers on bike trails.
9761	Mtn bikers on hiking only trails
9771	I find everybody shares the trails very very well. I just get nervous with my dog and horses around
9776	Off leash dogs sometimes do not sensibly share the trail as other trail users do.
9786	Generally everyone is friendly and happy to share!
9791	I find being polite and greeting fellow trail users goes a long way to a conflict free trail use. Sometimes I have to stop for dogs crossing in front of me unpredictably, but they're dogs, it's

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	not a big deal.
9806	Everyone I have encountered on all these trails are respectful, polite and share the love of the trails as a community.
9811	No negative experiences
9816	I try to be respectful and cordial to everyone I meet and that is pretty much always returned in kind (or ignored). I have not really had any "conflicts" that I can think of.
9831	Some Mountain bikers regardless of signage and fencing don't give the right of way to pedestrians and ride really fast (near end of Hyannis even with fence up). And on occasion up in the trails. That's the most common issue I come across. Mostly everyone whether hikers walkers bikers dog walkers are courteous.
9836	We rarely experience any conflicts
9841	Everyone seems very nice.
9846	Different trail users do a great job of getting along.
9856	Never more than the occasional nippy dog off leash
9861	Generally, users are well aware of each other which cause very little conflict. The only concern I've come across is when hikers are using trails that are primarily used for downhill mountain biking and are unaware of the trails purpose which puts all parties at risk. Proper signage at the bottom and top of trails would help alleviate this ignorance so that all parties remains safe.
9866	Dog walkers with dogs not in control can be a challenge. Commercial dog walkers seem to have good control of their dogs. Most mountain bikers are very respectful. The trail construction and maintenance by NSMBA has made the trails and area so much more accessible and enjoyable than areas where they are not active. It seems that the only way to have trails in good condition is to promote mountain biking on them - and I don't mountain bike.
9876	Out of control dogs can be an issue. Mountain bikers are respectful except for the odd yahoo. Tour groups can be a problem because too many people are on the trail in one area.
9881	sketchy dog but still no big deal
9891	Hikers walking up down hill trails, generally uniformed and friendly when told the trail is bike primary.
9911	Everyone seems to be invested in keeping the trail system sustainable, which includes keeping good relationships between user groups. I've never had a negative experience
9926	Equestrian users frequently do not clean up after their horses and leave the trails full of excrement.
9936	Hikers climbing on fast downhill trails
9941	People seem to respect other park users
9956	Some hikers don't like mountain bikers riding faster speeds downhill.
9966	Extremely rare to have any conflicts with other trail users.
9996	I've had no issues with any other trail users. Its been fairly easy to avoid being hit by bikes when hiking on trails.
10006	Hikers and dog walkers on mtn biking trails that are clearly high speed downhill
10021	Dogs off leash that are not under control suddenly running in front of me on downhill trails. Very dangerous for everyone involved. Owners are hiking up downhill trails with their pets and this is not always safe.
10031	Bikers riding WAY too fast on some of the trails. The majority are courteous and slow down when they see pedestrians.
10036	Hikers: taking shortcuts on trails (i.e. they don't stay on the trails as defined). Most often they cut across non-trail areas as it might be easier for them, creating new trails...usually down the fall line = erosion. Dog walkers (only once) refused to acknowledge the trail they were on was one-way downhill for MTB only. MTBikers: younger riders clearly ignorant of trail etiquette. Failure to yield when I'm climbing & they are descending.
10041	Mountain bikers ride aggressively on hike only trails especially exiting the Baden powell on Hyannis. People let their aggressive dogs offleash and out of site so when I walk my dog there is constantly the fear of an aggressive dog approaching. Many have well behaved dogs but any dog left out of site if it's owner is not appropriate. These people also give dogs a bad reputation which results in nice dogs not being allowed anywhere.
10056	I'm sometimes worried about bikes but really appreciate it when I can hear them - they often say thank you when i move out of the way.
10066	See dog walkers often but they aren't a problem. Bikers are polite. Other walkers friendly. Never have seen a horse in there.
10086	Dogs off leash aren't great on trails
10096	Very mild conflicts, involving spraying as they go through puddles. Or making a mess of the trails.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10101	some Commercial walkers not having dogs under control - mostly they do
	Mountain bikers biking fast on trails and not seeing walkers/hikers/dog fast enough around corners
10111	I have not had conflict with any user groups within the CMHC trails.
10116	a few times (not often), dogs have been off leash and not in control by the owner, resulting in verbal conflicts
10131	We all get along in there.
10136	No conflicts (knock on wood!)
10141	Noting that it is a multiuse trail, most of the time people are good but occasionally you get people who don't know trail etiquette whether a hiker with earphones on or godforbid speakers, dog owners with dogs who should not be offleash etc.
10151	Hikers on the bike trail
10161	In my experience, mountain bikers have almost always been courteous and respectful of hikers they meet on their trails, even during encounters on the descent trails. Commercial dog walkers have also been consistently respectful of other foot-based trail users, such as hikers, runners and orienteers. Personal dog walkers can be more of a problem, since they sometimes are walking dogs that are not well-trained.
10166	The closest thing to a conflict I've ever had is from residents complaining about non residents filling up 'their' trails. Other than that I find hikers, mountain bikers, and commercial dog walkers to be respectful.
10176	When I am horse riding, I have had a few dog attacks, when dogs are unleashed and untrained. I have learned over the years to dismount quickly and put myself between the dog and my horse. Since doing that I haven't had a serious problem.
Some bike riders think that they own the trails.	
However, 98% of all users are delighted to see horses and are very courteous, as are we. If they are visitors they often want to take photos with the horse.	
10186	I don't typically interact much with other users.
10191	People often don't slow down or move over for horses or they want to run up and pet your horse. They think their dogs won't hurt your horse however they don't consider the horse could hurt their dog accidentally. The risk now of a dog injuring a horse or rider is a big concern.
10196	Mountain bikers are usually quite disrespectful of horseback riders on the easier trails.
10201	I believe most users on the trail get along very well. My conflicts usually involve unleashed dogs left roaming freely on the MTB trails and features. I have been chased by dogs and once was bitten by a leashes dog while climbing up the old buck trail.
10221	I have not had any conflicts in the 30+ years we have walked our dogs
10226	Mountain biker riding fast and not alerting Walker (me) of there decent upon me. I was startled by them but said nothing. I jumped away and I guess was enough for them to feel they could yell and tell me I was the person who was at fault. Yes I had 1 ear piece in my ear, but the other ear was empty on purpose so I could hear anything around me. Over the 28 years we have lived here, incidents have increased with trail use.
10246	Sometimes the dogs scare me but usually they are docile and friendly. I find we all get along out there. Maybe sometimes I get a comment from a walker but it is so rare.
10251	It can be unnerving when mountain bikers pass at high speed. I have never been involved in an actual conflict. We all share the trails. Trail erosion due to hikers going off trail and mountain bike path wander are evident and can affect the usability of trails. Littering by other users reduces my enjoyment of the forest and there should be more signage indicating correct procedures/ penalties around littering (especially dog poop bags).
10271	People are usually respectful using the trails.
10291	Walkers on the bike trails
10296	Off leash dogs are the main concern. Everyone else on the trails is pleasant and easy to deal with.
10306	Bikes move too quickly on trails and not much control
10316	I ride courteously around others and aim to keep things friendly and positive. I also find that in the 10 years I've been riding in the area that trail signage has helped improve this and the addition of the hiking only trail adjacent to Empress Bypass!
10321	Hikers walking up the middle of the riding trails
10331	I've been riding on Seymour for 2 decades and have never encountered any conflict between users.
10336	Hikers sometimes hike up downhill only trails
10356	It's great to see everyone enjoying the trails, no matter what venue!
10381	Walker or hikers on mtn biking primary trails angry at mtn bike useage .

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10396	Lots of narrow spots, high speed of bikes
10401	Won't move off a downhill mtb trail, walking where they will most likely be hit eg. Empress Bypass
10406	I have never seen horses. I haven't had any conflicts, and find that if you approach people with a friendly attitude, they respond, and we all use the trails cooperatively before conflict arises.
10411	Have been bitten by a dog that the owner then refused to leash. Frequently must get out of the way of trail cyclists. Not a big deal, but I wish they would use bicycle-only trails where possible.
10421	People not respecting right of way
10426	People walking up a non rain bike descent trail. It's incredibly dangerous especially if they have a dog with them
10456	Equestrians and far too many walkers/hikers don't respect MTB trail signage. If you're walking up a PRIMARILY DOWNHILL MTB trail, A- you don't have right of way, B- get out of the way of speeding bikes, C- what the hell are you doing? I don't ride the crappy, unridable sections of the BP trail, stay off the MTB trails. Equestrians everywhere: If I have to pick up my dog's shit, and I do, you should have to pick up your horse's shit. END OF STORY
10466	People are nice, if you're nice to people
10491	Never had any issues!
10501	Hiker or a dog walker walking up the trail while I'm going down. Hiker using earphones and can't hear when I'm coming
10506	Occasionally run into hikers or dog walkers walking up or down mountain bike trails
10511	Off leash dogs that don't know how to react to a bicycle
10531	Hikers - occasionally groups (family or other) lack etiquette to keep to the right and let others get by. Mountain bikers - it would be nice if they slowed down a bit when hikers pull over for them to pass and when merging with Bridle. Dog walkers - most pull over to let hikers pass, it would be nice if all did.
10546	Sometimes people hike up downhill mtb trails but its only when they aren't paying attention that I worry. Doesn't happen often though.
10561	I try to be considerate and find others are as well
10571	I have been bitten by dogs three times in the past two years
10586	Off leash dogs acting unpredictably and touching without consent. Unapologetic and entitled dog owners. I am autistic and don't like being touched by unpredictable animals when I'm mountain biking. I've never seen any horses.
10601	Many many times I have been jumped on and nipped by a dog while on the trails. Dog owners/commercial dog walkers seem to not get their dogs under control when out on the trail and they are running wild. I used to love dogs before I started trail running - I know really dislike them.
10616	Dogs not getting off the trail or picking a side, not on leash, not responsive to owner, especially when multiple dogs or commercial...
10631	Sometimes hikers on downhill bike trails only, but usually okay
10661	Bikers going too fast and not giving hikers the right of way
10681	The MTB community have always been super polite & friendly towards me when I've been running especially in MTB- heavy trails. It's why I volunteer for trail maintenance (that & the fact I USE them!!)
10686	Just when a hiker is giving me on a bike grief when they are on a bike trail.
10696	Everyone is friendly on the trails and respects right of way.
10711	Dog poop
10716	Sometimes people on foot don't seem to understand that the trails are multi use. I've had people get angry when they see mountain bikers on the trails. To be clear, I'm always respectful and make space for others and avoid engaging with those that I'm referring to above.
10721	Be friendly, respectful and everyone gets along - no conflicts
10736	While mountain biking sometimes hikers think we're the thrill seeking bunch but when they realize we are not they usually are ok.
10741	Dogs running in front of my bike
10746	There is a good amount of trails
10761	Generally I don't feel that there are many conflicts. As a mountain biker I expect certain trails to be accessed by hikers, dog walkers, etc. Fast DH MTB trails are less frequented by these users. When multi use is expected, I respect other users and make sure to yield way. One area I have experienced conflict is the section of Baden Powell from the top

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10771	of severed to the powerlines. This would benefit from a MTB specific DH trail parallel to BP Often the unleash dogs are not controlled by their master and attacked me, nibbling my ankle. The master is not in view of his dog so cannot discipline. It happen with all type of dog, big and small.
10786	Misunderstanding. Too narrow of trails esp multi directional, multi use. Doesn't allow for passing without disrupting someone experience
10796	Running into hikers on MTB primary (extremely popular MTB) trails, or going against the direction of a trail causing safety concerns.
10816	Walkers/hikers on MTB specific trails
10831	Lack of courtesy calling on passing, person/activity agnostic. Some people just don't know the etiquette.
10846	Never have conflicts. People are nice
10851	I don't go on weekends as it's often too busy
10856	4 years riding Seymour I have never had any kind of conflict
10866	Very few conflicts. Most people are great most of the time.
10871	Large numbers of off leash dogs all over the trails
10921	Everyone seems very respectful of each activity
10926	Dogs off leash can be unpredictable and dangerous to bikers. Especially the commercial dog walkers with larger groups or when dog walkers (and hikers in general) walk uphill on popular mtb trails, it can be quite dangerous.
10966	For mountain bikers, with the influx of new riders this year, I've had some close calls with collisions simply because newer riders are not necessarily well versed in trail etiquette. Walkers/Hikers are often coming often aren't looking up the trail or behind to see if a biker is coming so it is hard to get around and also making sure not get to close to them
10991	Illegal mountain bike trail building
10996	Frequent fast moving mountain bikers exhibiting little regard for the safety of oncoming hikers.
11006	Never see horses here. Can get busy with bikers, ratel a 'conflict' just an interruption of our run or hike.
11051	I've never had conflicts with anyone. Most people are aware of trail etiquette and are just out to have a good time.
11056	I should stress that the vast majority of mountain bikers are co-operative and politely warn us hikers that another biker(s) follows.
11061	Sometimes bikers do not slow down or warn they are approaching or even say how many are in their party so you know how long to wait off the trail
11071	Just when it's busy
11086	Working together with all users is a priority- Courteous use is typical in this area
11096	I am using these trails 3-5 times's week and have been every week for over 20 years. Use the trails for hiking, dog walking, and MTN biking. I have NEVER EVER experienced ANY conflicts, or witnessed any conflicts, or even heard about anyconflicts from anyone, EVER.
11111	My personal experience is that pretty much everyone up there is extremely polite and friendly, regardless of what their current activity is. Occasionally dog that are off leash will come up to my bike and I'll have to get off in fear of hitting them. Everyone using the trails are very respectful and I've never had any conflicts.
11121	Dogs frequently off leash. Most are fine but are very untrained and have either approached on threatening manor or run out on front of my bike.
11126	I've never had a bad interaction with a walker/hiker. I find respect is a two way street. Most people are very friendly and say hello. While traversing Bridle Path on a bike, I've had dogs running ahead of their owners surprise me while I'm in a tight spot on a trail, or on a wooden ladder bridge. I haven't been bitten on CMHC land, but I have been bitten while biking within the District of North Vancouver.
11131	I can't think of any specifically on CMHC trails, but just in general having awkward passes with other hikers/walkers/trail runners or with mountain bikers. I'm not clear on when I should yield on what trail, and I don't think others are clear either. In general, off-leash dogs approach me for no reason and jump up on me (happened this morning, though on a DNV trail). Kind of annoying, and it would be scary to get bit on a trail that's remote.
11136	I MTB so I don't usually have any conflicts with them. I have not run into horses much. Most dog walkers are fine if they only have 1 or 2 dogs. I am friendly with hikers so I tend to get a favorable response.
11141	Huge increase in trail usage over the past couple of years, which means trails that are labelled multi- use should really be single use. Encountering hikers walking up high speed

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	mtn bike trails while coming down is terrifying. Likewise, huge number of trail runners coming down Good Sir Martin which is a bike uphill only trail. They often fail to cede right of way which means having to stop riding on an uphill... leading to walking
11156	Out of control dogs being walked or with other mountain bikers
11161	A couple of times where bikers are going too fast to be able to give way in time.
	Once a dog being walked by a person with multiple dogs nipped my husband. It was unprovoked.
	Dog poop bags left behind and dog poo not picked up particularly at the entrances to the trails.
	I never see horses on these trails (unfortunately).

Summary for S2Q12

Do you think there is sufficient on site signage for you to find your way in the CMHC trail network?

Answer	Count	Percentage
Yes (A1)	1058	62.16%
No (A2)	451	26.50%
Not sure (A3)	178	10.46%

ID	Response
101	Protection from development.
111	Some trails should be designed to encourage active transportation, between subdivision roads, schools, golf course.
131	Specifically, supporting the NSMBA. They spend a lot of time supporting the long term strategy for the trails. Supporting bikers and hikers.
151	Kindness & cooperation
196	Articulate the need for more First Nations collaboration and Consultation - the above should all rely on this. Fundamentally, Environmental and Cultural Stewardship should be THE priority as this trail system doesn't work if the environment is degraded. The others, while important, are secondary.
201	Retaining the CMHC trails in a rustic condition; please do not gentrify; serious hikers need at least some of the trails near Metro Van which have a sense of serious outdoor experiences, not groomed urban parks.
206	Note: None of the 7 choices below apply: leave the trails as they are. Keep it wild. Partnership and collaboration reeks a little of sponsorship - don't do this. We'll have the coca cola trail
211	Keeping them open and accessible forever would be a good start.
216	Recognizing these trails are a public asset and access to trails should not be restricted to residents only.
236	Above all trails are for everyone. They should be equally accessible to all people regardless of where they live, their activities, their age or their abilities. I notice there is more limitation on people accessing these trails, mainly from the increase in parking restrictions near trailheads that disproportionally affect lesser able-bodied people who live outside the neighbourhoods.
246	The trails are a valuable asset that should be available to all users.
286	Not that I can think of
341	Don't dumb down mountain bike trails
426	More advanced Downhill mountain bike trails
431	When considering environmental stewardship, keep in mind that the footprint of the trails vs the larger park area is not significant. The trails serve to minimize impact by channeling it.
436	Mountain bikers are NOT the enemy.
456	The Seymour area trails are a financial driver for the local economy. Help to establish the North Shore as a world class mountain bike destination.
501	NA
511	More bike trails
526	All of the above are extremely important. Adding new world class trails for all skill levels, while intuitively not the most environmentally conscious of actions, will help curb the rampant rogue trail building that is happening on Seymour. The north shore is world famous for mountain biking culture, but our sanctioned trail network is a joke compared to many small towns not far from here.
561	It's difficult to comment on without all the details. E.g. Equitable access - Adaptive bikes should have trails to use, but not all trails should be made to work for them. It's important to recognize that not everyone likes the same thing and there should be allowances for different tastes, skills and physical abilities. Community engagement should involve the user community, not just the residential community.
586	I wasn't really sure about the interpretation of all those principles. I'd add the principle of being able to my dog to the trail is very important.
591	Work closely with NSMBA, and other existing trail organizations
611	No user group has priority. The focus should be on how to share the area effectively.
721	Mt Seymour's trail network is part of the world famous North Shore trails (for bikers). It was

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

largely built by bikers for bikers (and everyone) and is maintained to a very high standard almost exclusively by bikers. This investment by the very active and engaged bike community should be kept in mind when looking at the future. It would be very sad to see bikes pushed out of the very trails they created. There's room for everyone!

731	That covers things.
796	Promoting North Vancouver as a world class mountain bike destination.
871	This area should continue to be used and maintained as it currently is. The trail networks can be modified and added to so they connect and flow into each other further creating the existing network. Keep in close partnership with NSMBA for essentially free labor on future projects. As much as this area is part of nature it is basically a massive outdoor park for trail enthusiasts (walking, running, riding) use to full potential
936	Alternative options. There are many places to hike and walk on the north shore mountains, a lot fewer to walk your dog, and even fewer to bike.
996	If CMHC isn't funding the trail maintenance and upgrades and it is being done by volunteer input, the ability to identify primary users on the trails that are developed or maintained by those volunteer groups seems fair.
1076	The whole network of trails today now attracts many dog-walkers from across Metro Vancouver, in addition to daily hikers and walkers, plus MTBers from around the globe. It's getting busy enough that I no longer ride there on weekends. Many trails are not followed by walkers/hikers and there are increasing numbers of "braids" - shortcuts from one section of trail to another. Signage to 'stay on trail' and "shortcuts destroy trails" might help.
1141	Allow others to work on the trail. Not just the NSMBA. School groups, hiking groups etc. Build a plan that is more multi use. Not just mountain biking.
1161	We need to look outside our community to see how other networks are successfully evolving their networks. Seymour is far behind the curve.
1196	Understanding that the mountain bike community is an extremely important benefit to the community and ensuring current access is maintained and future access to more trails is strongly considered
1201	I believe in equitable access but things like who has built and maintained the trail network (largely mountain bikers) should be taken into consideration.
1271	N/a
1281	Respect for the traditional users and usage of the area.
1286	Understanding of the various stakeholders needs
1286	For any residents of the area who are unhappy with maybe the amount of cars that are parked near the various trailheads, they must realize that these lands are for all to use. They should consider themselves lucky that they are able to live, and afford to live, so close to them. Not everyone has that benefit and therefore have to drive to get there, and need somewhere to park. They should be able to do that.
1316	Historical value of legacy trails as an international tourist attraction.
1321	Retain the character of the trails as we scale the network to the increased demand
1351	Overuse. The trails are very popular, more trails, especially moderate and xc ones would spread the load more.
1411	Tourism
1596	Equitable access needs to include trails that are difficult enough for advanced riders, not only easy enough for everyone
1601	Indigenous stewardship
1611	You can't allow the District to make access only for Blueridge residents. Where you could park in Hill Road it's now 'no parking' thanks to District Councillor Jim Hansen who lives on that street. Stop favouring and kowtowing to Blueridge. They don't own the streets.
1631	Where legacy volunteer efforts have come from in past to establish current network should be reflected in future plan.
1676	Common sense
1691	The involvement of the NSMBA is incredibly important. The fact that some of the other governments/land owners have ignored them for organizations like IMBA is shameful.
1696	Education about wildlife for safety as well as knowledge and appreciation
1701	Trails forever, trails for all.
1726	Kids accessible trails
1746	Seymour is very difficult for kids to learn how to ride
1746	Not all trails should be accessible for all. The dumbing down of trails so that everyone can use every trail does not improve the network. Build others that are easier to access for the tourist/day tripper. Some of us pay lots of money to live close to the trails so we can use them daily. I don't use some trails. They are too hard. That's ok!!
1751	Quality and variety of all levels of mtn biking trails. We all to often accommodate the new trail user / mtn biker whilst taking away from the advanced riders bring back the hard trails and typical nth shore trails with skinnies and trails that not every joe blow can ride.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

1786	Respect for the land and other users. Everyone is in the trails for the same reason.
1801	Would like to see challenging mountain bike trails maintained and expanded.
1916	Too many intersections - using colour coded symbols to define most commonly used routes with data from Trailforks Heatmap, but preserving trail names, ie: traversing Bridal Path, climbing Good Sir Martin, descending Corkscrew/Pingu/Boogieman/Boogie Nights/Empress Bypass
1961	Guidelines for commercial, for profit, groups or individuals.
1976	No net trail loss.
	Hikers and dog shit walkers have overrun the trails in the last two years.
	Leverage trail maintenance volunteer groups led by funding the NSMBA to manage trail maintenance efforts without complex paperwork. Many existing trails are 100% volunteer created and maintained - recognize and respect these volunteers.
1981	Trails that are accessible to all. Lots of the trails are not accessible to the majority of mountain bikers since they are very hard. Improving trails to be family friendly and for all levels of mountain bikers would be an asset to the north shore
2036	Don't ride/hike trails above your abilities. Be kind to others. Enjoy the beauty.
2106	Work with other land owners to have a network of trails across Seymour that flows, is safe, and can be accessed by all. Perhaps separate usage type for some trails to avoid conflicts.
2121	The ability for everyone to get outside, from an absolute beginner to a professional, and to be challenged.
2136	Preserving historical biking trails. Trails such as severed and boogieman changed how the world viewed biking possibilities, and influenced the direction of a world sport and bike design.
2141	Etiquette, especially all the new users.
2176	talk with those who currently maintain some of the trails. EG NSMABA PLEASE no making easy routes out of established challenging black trails. There are more than sufficient easy trails now.
	Hiking only trails are in general in pretty bad shape. Focus on improving them using already established trail building principles applied to the MTB trails. Graveling in trails as is happening near the Mary Kirkford trail area is poor idea.
2181	Allow new trails to be built to meet the demand of trail users.
2196	Work with tsileil waututh and Squamish to use indigenous names for the trails
2216	Protect some of the high value environmental areas, but recognise that the area was once clear cut.
2251	making new blue trails for intermediates. making new trails to make North Van a more desirable destination for mtn bikers.
2301	Engage with the NSMBA, the orienteering and trail running associations. They are fantastic organizations that give back to the trails and have insight on the needs/desires of trail users.
2361	Recreation opportunities are limited in our growing communities. We need to expand the trail system to accommodate the increase in users.
2376	Promote physical health and wellness through activities
2446	No E-bikes
2471	Trail usage is increasing, particularly for mountain biking. If there are no plans to add new trails to the network then a number of trails in the CMHC area should be modernized to help cope with this additional traffic. Many of the trails in this area were built during a different era in the sport and are not appealing to most users, even experienced / advanced mountain bikers.
2476	Parking can be terrible. Those who bought property next to some of the busiest trails in the region need to realize the trails are important and not for their personal use only. You buy a house next to a trailhead, don't complain and have the city limit the parking to users. You bought there.
2481	Preservation of mountain biking heritage. This could be thought of as a type of cultural stewardship.
2566	More accessible trails for adaptive-bike users, trail-riders, etc.
2581	Expanding mountain biking opportunities (including advanced & expert level trails) is conducive to equitable access and beneficial to the community. There are already far more trails available to hikers than mtb (case in point: the next question refers to hiking *only* vs. mtb *primary*). Outdoor recreation (incl. mtb), is beneficial to the community by fostering appreciation of the natural environment, fitness/exercise and community spirit.
2606	Reconciliation
2636	Enabling maintenance and modernization of existing trails should be the highest priority. The development of progressive and approachable mountain biking trails should also be more

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	readily approved.
2656	Engaging with the community to keep the positive aspects of existing trail use running smoothly. A world class destination like Mt.Seymour could always improve but as it, remains very useable.
2681	This is not pristine wilderness and does not need to be treated as such. It is logged-out second growth ex-"tree farm" Nor is it an urban playground. It should not need dumbing down or catering for the lowest common denominator
2701	Build more (biking) trails.
2721	Environmental conservation and maintaining the safety of our neighborhoods.
2746	Partnership with trail advocacy organisations is extremely important along with a clear dialogue concerning planning and partnerships for the trails
2841	sustainability
2846	
2851	Without the work of bikers in the past decades (me being one) there would be no network as it is.....Clear signage at the bottom of mountain bike specific trails warning of no up hiking would be helpful (this is particularly true of John Deer not that I go down it).
2901	Consideration of wildlife and habitats; fire awareness and prevention;
2961	Safety! Local hikers from our community should be safe from mountain bikers coming from all over the Lower Mainland. Designate trails for mountain bikers to use so those of us that walk here daily can be safe.
2986	Mtn. bike trail networks expand over vast areas of parkland, wilderness areas and urban forests when none had existed 2 decades ago. At what cost to Mother Nature? Members of local natural history groups cherish nature so important to life-long learning, health and socialization. The ecological integrity of those wild areas we love to explore, and want to protect, are negatively impacted as bike trails expand everywhere. SINGLE USE TRAILS!
2991	I find that the mountain bikers do most of the trail work and that other users think that it gets done by the city.
3006	That all users should be able to coexist peacefully while respecting & preserving the world-class heritage that is the iconic North Shore.
3031	Please keep this trail network, it is SO important to everyone that uses it. I think the only thing I'd improve is to build some easier trails. Most of our trails are moderate or really hard, with only a few easier ones.
3061	I am super concerned that the "community" definition above might be limited to just the homeowners near the trails. Many of us can't afford to live there and have to drive from further out to access them. Our voices should count too!
3071	Connection to the initial spirit and roots of the mountain bike trails. This involves preserving original trail features to the extent that is reasonable and maintaining the sense of adventure and challenge inherent in the trail network.
3106	Access to all
3116	Better signage for high use downhill mountain bike trails like Pangor so that hikers may choose a different route with less potential conflict.
3136	Mountain biking on the North Shore is world renowned, and for good reason! I think it's important to keep it that way.
3151	Indigenous sovereignty —> consider whose lands these are and honour Indigenous voices
3176	The designated areas for bikers and hikers has made a big difference. More separation would be helpful.
3231	The volume of use indicates more trails are needed
3256	Historical education
3271	Consider separating between mtb primary and hiking primary trails to reduce conflicts.
3326	Would be great to have resident priority parking in certain areas. If we could apply for free parking passes
3346	Trails for all Trails forever
3356	Being so close to an urban area and the sheer volume of new users since the pandemic, I believe the network needs to be expanded and further developed to provide experiences for all users, more terrain to spread out the increasing crowds, and more development of advanced double black MTB trails.
3391	Prioritize locals over weekend warriors who visit the trails.
3421	That our local wildlife lives there too and we should always take that into consideration when planning trails and access. It seems there are already more trails than the wildlife can handle and nowhere quiet to hide. Pushes them out of their homes. Namely fast mountain bike trails - we need them, but too many cross destroys their habitat.
3461	Keep the area free for access for all. However, right now the Rifle Range is heavily used by commercial dog walkers. Those dogs need a free roam too - but groups of 6+ dogs with one

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

3471	handler have the potential to overwhelm some people and some dogs. Which, I fear, will have impacts on personal dog walkers who just want to get out in the forest with their pet. If RSTBC is going to have equitable access as a principle (in terms of trail use groups, bikers, hikers etc. not talking about those with disability), then the relevant associates need to step up in terms of trail maintenance. Right now, the mountain bike association (NSMBA) does pretty much all trail maintenance, and so should have the loudest voice at the table in terms of strategy and planning.
3496	Family friendly
3551	History of the area. Mushroom parking lot 1940's. Rifle range. Old Buck Logging
3561	accessibility for everybody who wants to enjoy these beautiful trails, keep the trails clean & save but avoid "gravelling them down". The fact that they are sometimes a bit rough is part of the attraction
3566	Community use first
3571	Conservation /preservation of vulnerable ecosystems (limit access to sensitive flora /fauna habitat)
3576	Highly accessible trails for children and beginners.
3586	Ignore the Biueridge homeowners association. Total NIMBYs
3601	The rich trail building history that has made the north shore famous WORLDWIDE in mountain bike communities.
3671	If new rules are out in place please consider through fares - ensuring that anyone passing through from connecting trails can traverse the areas (ie. an off leash trail)
3711	Some Indigenous history and information signs are definitely in order
3716	Impact on wildlife- should allow wildlife priority in areas
3721	Provisions for future: we have one of the most widely renowned trail networks for mountain biking in the world. The NSMBA has been a critical and successful steward of these trails, their capacity to continue maintenance and expansion of the trails should be at the top of the priority list. Not only does the local biking scene provide massive amounts of economic benefit to local businesses, it drives tourism to the area
3786	Respect for private property. Enforcement of trespassing
3796	Work with trail associations to maintain trails. Provide funding to the for maintenance, rather than government employees. The organizations such as the NSMBA provide good value for money with the volunteer hours
3836	Am not really sure that anything is "broke" or needs fixing. The network of trails is well established, well marked, maps are available and the current network of trail supporters does an amazing job of maintenance and management.
3846	Let the area stay natural and as a large off leash dog area. Don't ruin a good thing.
3856	It would be great if some trails were open to dirt bikes.
3861	Mountain biking is a core activity in these areas. It is a world renowned area and should be considered that.
3891	Preserve erosion. No waste on trails.
3896	'Too easy access' = too many people. Seymour/Deep Cove area does not need another Quarry Rock. Only additional note on etiquette would be education for 'powered'/electric-MTB, ie. it is not safe or polite to blow past someone grinding up Old Buck trailhead just because your battery-powered bike allows you to.
3926	I'd like to see some engagement with first nations.
3966	Should be treated as a neighbourhood resource, not Metro Vancouver resource
3981	all users respect each other and communicate with each other while on the trails. Examples: 1) when i hike a bike trail i always give way to the bikers since i know they need to pick a line when riding down hill. i also let them know if there are anymore hikers close by to watch for. 2) when i bike as i approach hikers from behind i alert them from well back that i am coming (either a whistle/bell or a short skid). key is to doing far enough back
4036	Keep the MTB trails challenging.
4056	Provide resources and support to builders who want to expand the trail network.
4086	A place where all skill levels can have fun and progress
4121	Working with other land managers in the area to create a cohesive network that has connectivity and progression.
4156	History of mountain biking WORLDWIDE is rooted in these trails. To change them in any way would be heartbreaking
4201	Build more trails
4211	Legacy partners. I'd love to see the folks who made mountain biking what it is today involved as much as possible.
4216	"trails for everyone" means there needs to be difficult trails for expert mountain bikers, aswell as the existing beginner routes.
4236	More jumps

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

4261	Building more challenging mountain bike enduro/downhill trails
4271	Improve access and improve beginner trails and areas
4296	Building real freeride mountain bike trails
4331	Indigenous stewardship
4356	Having dog friendly, off leash trails is important
4361	Dog friendly (officially) -More obvious signs for trail direction (so hikers don't hike up bike trails)
4366	Trail access is equally important for my physical and mental health and I would think that many other users feel the same - whether they be hikers, walkers, dog walkers, trail runners, cyclists.
4371	Trails are not a racing course, kindness is always encouraged especially on weekends
4451	N/A
4456	More difficult mtb trails
4551	Consider ways to retain existing trails' history and character while expanding to new trails that offer a wider variety of riding styles and other activities
4591	Good mountain biking trails...don't destroy the trails
4631	Allow electric mountain bikes . They are the future . To restrict access to electric mountain biking is discriminatory to the older mountain biking population. Studies have shown they are not harder on the trails than non electric mountain bikes
4701	No
4706	Use professional trail builders. Work together with the NSMBA
4761	Maintaining the variety of trail types (North Shore tech, flow trails) and trail difficulties to promote rider progression and engagement. Setting a high standard and good example for other trail networks and trail associations.
4786	Nah
4801	Trust that the mountain biking community (NSMBA) is extremely considerate and willing to put in a lot of hard work and education to take care of the place we love. We care deeply about all trail users and believe the forests and trails are resources that we need to take care of and protect. We routinely reflect on positive and/or negative interactions between ourselves and other trail users and try to find constructive solutions!
4846	XX and enduro trails, climb or descent, are not the same as a hiking trail. This should be educated to both cyclists and hikers.
4896	Build on the legacy of the North Shore mountain biking, but incorporate principles of all ages, all abilities for new trails.
4906	Na
4911	Trails for all
4916	Please ensure that people are respectful of the trails and the other people that use them. Also include the assumption of risk associated with mountain bike/hiking trails.
4921	We need more beginner trails for kids and families and a home base. Consider a pump track and skills park.
4956	I have always said this! There should be general sign age and a campaign - please pass on the left (just like the rules of the road)!!!!!!applies to all, hikers, runners, riders. Probably most evident with hikers though!!
5001	Maintain the world class mountain biking trails.
5196	Increasing ridership on trails by building new challenging trails and maintaining others.
5226	Don't mess with what is already there. Can't imagine how gov't involvement will make it better, it will only make some losers out of existing users and close some valuable trails. Just keep your hands off it.
5251	Importance of mountain biking to whole north shore community and economy
5256	Growth of outdoor sports (i.e. more facilities/trails/areas to accommodate the increase in popularity)
5306	Concerns of residents living near busy trailheads.
5326	Collaboration with activity groups like NSMBA and other trail users.
5396	This is a wonderful wild space and should be left to be as wild as possible.
5431	Please don't take away our trails
5456	User maintained and managed. Ensuring some elements of what made these trails great remain.
5636	Signs at the bottom of trails letting hikers know that they should be aware of bikes on the trails. Most hikers/walkers have ear buds in and are oblivious of their surroundings.
5656	Shared use. Consider Moab, UT as a model of shared use that works very well for all users.
5666	Keeping the network of trails well maintained and open and safe for the public
5676	I think inclusiveness. These trails are not just for people that live in the neighbourhood, everyone should have the right to come into the community and use the trails!

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

5696	I think a guiding principle should be: to provide suitable facilities to allow athletic progression in the sport of Mountain Biking (all disciplines). A similar model to a Nordic Ski area would be appropriate.
5716	sustainable volume of traffic on trails. more trails to spread out wear and tear.
5736	It would be important to take a good hard look at what user groups have taken care of these trails over the last 30 years, who has popularized them, and who has made them of economic importance to the North Shore. Hint: it isn't equestrians. It's time to treat mountain bikers like the biggest and most important trail user group that they are. Universal/adaptive MTB trails could be really useful for all!
5746	Minimizing loss of trails.
5766	Please don't start a reservation system
5811	There are many regular users of the network who understand that access and stewardship is important, but that message isn't always quickly picked up on by occasional users
5831	I think more information on user type would be beneficial. For instance at the bottom of a high speed downhill mountain bike trail there could be a sign indicating this so that if somebody wants to go up it, they can proceed with caution
5836	I would ask, why are we doing this? Do we really need to invest limited dollars on this exercise? I'm in my mid 50s and spend a lot of time in the woods, hiking, running and riding. Over the last few years it's been terrific to see more people in the woods. The expansion of quality, well built trails has been just phenomenal creating literally a world class destination. I'm not convinced this exercise and oversight can improve on the status quo.
5846	Safety
5866	I think there is a place for user exclusion. If not an exclusion, a different priority hierarchy should be given so that users know what to expect. The general rule is bikes yield to all but trails that are bike specific should give right of way to bikers. It is a huge safety concern when a group of hikers are ascending a downhill bike trail and riders may not be able to safely stop/avoid them.
5881	Sustainability is an important principle, but I think that could be wrapped up in the Environmental & Cultural stewardship category.
5896	No ebikes or separate trails for ebikes
5906	Expand the number and variety of trails for mtn biking.
5926	Engaging the community and trail *users* to contribute to the maintenance of the trails. Trail passes or other methods.
5941	Education
5981	Mountain Bikers and NSMBA are the only groups regularly maintaining the trails. They should be given more freedom to expand and modify the existing trail network
5996	Nope.
6001	We all share it. Respect it. It is hard because people work hard on it. Don't hike a DH only trail.
6046	It's been a life saver for my two kids age 13 (boy) and 15 (girl). They are both mountain bikers and have built confidence in navigating the mountain, spending time with friends and nature. They both had anxiety and too much screen time but mountain biking changed it all for them. They are our future land stewards. The more the next generation feel connected to the land, the better future our parks will have. We LOVE Seymour.
6056	We need more mtb primary trails and have more trails with climb only /down only directional signage.
6101	Diversity in rider level
6106	Many of these trails (I would argue most of them, with the clear exceptions of Baden and Bridle) have been established and maintained by the Mountain Biking community. This is where many riders come to get introduced to the sport or experience "the Shore" for the first time.
6111	Continue to expand mountain biking opportunities. I believe this is the most active and largest user group, and will likely continue to grow, and which has proven most capable of volunteers time to trail maintenance.
6156	Trails in a wilderness area should not be "tamed." If there is a desire for accessible trail space (eg the Hyannis trail), build trails of that kind (in limited number) and designate them as such. But do not try to convert a network of rough trails into smooth "accessible" trails. Bikers, hikers, and runners go to these specifically because they are more rough--we do not want the wilderness areas around us to be civilized.
6166	Environmental conservation (erosion control!!), connection with Indigenous people (incorporate their names for things, any teachings about the area, etc) and of course trail safety
6221	Better upkeep of existing trails, for erosion. Less emphasis on more trails and wooden stunts for MTB trails.
6291	Strategies that make all users happy. I.e. keep the bikers away from the hikers. Give the

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	hikers peaceful places to hike. Give the foragers peaceful zones away from people.
6321	to make is accessible for all, with some planning as to what goes where
6341	Please make the trail signs easier to read - the trail names are easy too small and impossible to read from any distance
6401	N/A
6406	Respect for each other and nature
6411	Trail designs (for bikes) evolve with the technology (the bikes). We need to create a flexible environment that allows for "modern" trail building, to ensure that we continue to serve the evolving appetite of riders and keep the north shore's legacy as a leader and pioneer in mountain bike trail building. Being able to do this (truly serving the needs of users) will bring economic prosperity as a byproduct.
6461	Variety of level of challenge is important Equality shouldn't mean blanket consistency
6466	Trails for all abilities. Very few beginner trails aside from empress bypass
6476	Peace and quiet with as few people as possible.
6501	Two more long trail options.
6576	This is a world class destination for recreation. Everything should be done to preserve the existing trail network and to continue to provide free access for all activities.
6596	Be kind
6601	New trail development to ease crowding. Covid has brought a lot of new hikers and bikers, which is great, but we need to be able to spread out to keep things safe and fun.
6671	Don't overcompensate for perceived issues Keep it simple
6696	Indigenous background info, historical significance
6726	Highlight old growth trees or stumps in area
6741	Separating mountain bikers and hikers
6761	Trails for all.
6776	Dog poop bags not left behind.
6791	Maintain free public access to the trails while providing a high density of options to disperse trail users.
6796	These trails are the birth place of mountain biking and have historic value
6816	I think more clear designation of trail intended use would be valuable. Some trails were built by the mtb community for the intent purpose of mountain biking. This is not made clear. I think designating some trails as mtb specific and directional would be beneficial. Having hikers come up a trail that is intended for downhill bikes is not good. At the same time, having clearly marked multiuse trails with signs indicating proper user etiquette
6856	Safety
6941	Please allow the trail experts to fix/maintain the trails. The NSMBA is an incredible group. I have volunteered countless hours of my own time at zero cost to anyone, to maintain trails on Fromme. They run an awesome trail building academy and recruit trail adopters. Please I beg you. Use NSMBA or their builders. They know what they are doing.
6961	There should be dedicated trails especially downhill steep trails that are biker only Fines for people who walk their dogs without leashes
6996	Relationships with First Nations.
7031	Hire professional trail builders
7056	Freedom of access to everyone
7066	Consider the positive health and economic benefits on the community from the world class quality and challenge that the trails currently offer
7101	The trails are for people (and wild animals), not domestic animals.
7121	Free, unencumbered public access should remain. Trail signage should not be overwhelming. Trails should be kept as natural as possible.
7136	Give a Hoot don't pollute!
7151	Retaining historical mountain bike trails
7171	The net benefit of this land to all that use and recreate on it is tremendous
7181	Including access for a variety of activities even if they are not the most popular eg. this is one of the best areas for Orienteering in the lower mainland so it should be great to formalize access for orienteering
7241	Accessibility. These trails are really hard, it would be great to be able to take my kids on more rides here than driving them to Fromme.
7286	e-bike use of the trails best be given careful consideration to ensure safety of all trail users. I hope a position on the use of any motorized vehicles on these trails can be made.
7326	Access for everyone. Keep investing in the network to meet the demand (throughout BC Parks).
7336	sustainability
7361	I'm not sure what these principles mean in terms of practical actions or outcomes.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

7371	Don't charge for access or restrict access
7431	Consider the historical and defacto propose and use - ie, it's predominantly *difficult* trails for challenging exercise. The route finding being a little difficult is a part of the magic of discovery.
7466	Consultations with local Indigenous Nations, Elders, and community leaders.
7511	As with urban bike-paths, resistance to change is sometimes overcome _after_ the fact! Present working models, then see which the users will favour.
7546	Open access; recreation area; nature for people.
7556	Trail etiquette should be formalized and posted throughout the trail network. In particular establish who has right of way on trails not designated mtn bike primary.
7601	-
7606	Improve relations with local neighborhoods.
7631	Use for all people, then bikes and horses. Not many horses on these trails!
7636	Every trail is epic
7646	That the trails are for everyone.
7651	parking issues in Blueridge caused by non residents enjoying the trails.
7676	No
7681	Considering the pressure that increased density is bringing to the Maplewood area and other District of North Van neighbourhoods, this trail network is a precious amenity for folks to recreate in, but its use needs to be managed thoughtfully to ensure its overall sustainability. This could include placing environmental impact considerations at the centre of decision making to protect the natural attributes of the area over the long-term.
7711	The users of the trails are more important than the residents who live near the trails
7786	A good principle would be to ensure visitors and the community continue to have access to the premium, world class biking trails we have here across Mt. Seymour. These trails are very special.
7791	integrating signage detailing easy conservation efforts a hiker can undertake. Also, allowing more off leash trails.
7801	just get more roads on the north shore and more ways to get off the north shore. I cant believe you guys want to build more housing when it already takes 2 hours to get over a bridge n some days. its actually ridiculous. and dont knock down our trails for "parks" no one cares about parks just call it what it is u guys are knocking them down to rezone it for residential housing so you can get more money and laugh while it takes us 3 hours to get o
7826	Maintaining or expanding the size of the CMHC forested area being protected (eg into the DNV area due east?).
7841	Maintenance to ensure the long-term sustainability of the trails.
7851	There need to be environmental assessments and community engagement plans for decommissioning of trails. All trail users should be consulted and access for all abilities of users is very important.
7856	Dogs should be on leash with the rules enforced - it's a growing problem. Dog owners don't seem to care and are not courteous.
7866	Safety, trail quality.
7896	Maintain "less is more approach". Don't over-sign or over plan the area.
7906	The trail network doesn't have anything suitable for kids. It's too steep for kids to ride up old buck, and even empress is pretty steep and rough for kids on 20" bikes or less. I wish there were trails for kids to enjoy. This is an equity issue.
7931	Safety
7966	Just include all users for feedback. The north shore forest is why we live here!
7976	maintaining the character of trails while evolving to handle user growth. This will likely need to include both new trail and twinning of some current trails to separate traffic by use and/or directionally
8006	Climate change awareness
8021	Variety of skill levels for mountain biking, regular maintenance for safety
8056	Different trails for ebikes treat them as a category on its own. Do not include them in Bikes or Mountain bikes. They are NOT a bike. They are a motorized vehicle.
8106	As we used to do, leading British Columbia in having the best MTB trail network.
8116	Cultural education
8166	I think the network is one of the best around, and very good when compared to other regions/states/provinces. From what I can tell it's a very friendly area, well-signed, and helpful people all around to assist in wayfinding and shared trail usage
8191	Build more challenging trails and people will build less illegal trails. Boogie nights is a perfect example. Telling Kona that the trail is too challenging and having them pull their maintenance is the exact reason why rogue trailbuilders build trails on the dark side. Bring us the goods on this side of the mountain.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

8216	Establishment of proper trail etiquette education and signage. Trails for all but we must respect each other.
8226	Not sure what you mean by "Equitable Access". If you mean, ensuring access points and parking are available for all of those who would like to use the trails, then Very Important. If you mean, having the trails so groomed s they are 'accessible" by anyone, then Not Important as these are nature trails and should not be urbanized.
8231	Challenging trail features should be preserved and not 'dumbed down'
8246	Historical preservation - These trails are world renowned in the bike community
8276	Better integrated trail network with more climbing specific trails like Good Sir Martin that provide access to down trails loops all around Seymour, riverside drive - summit - deep cove etc.
8326	Sustainability of trail network
8346	- Consultation with First Nations - Continue to make these trails world class
8351	Maintenance of access that we now have - this is a very precious and well-used network of trails. Respecting a range of trail options ie accessibility for lower fitness levels and those with mobility problems, but also recognizing that some tough gnarly trails offer challenges and joy to other users!
8356	Engage with the user groups. Especially the NSMBA. NSMBA and it's volunteers put in hours of trail building and maintenance that other user groups don't. While MTN bikers tend to be viewed as brash and travel at faster speeds, we don't put in far more work than hikers or walkers.
8366	Historical development/usage of trails
8371	Do not bureaucratize and create rules. It's not broke to don't fix it Avoid the temptation government has to regulate everything. Don't listen to special interest groups
8376	Education for all ages about care and use of our precious CMHC Mt Seymour resources and environment
8461	Expansion and sustainability. Demand will increase. Lots of maintenance done by NSMBA. Not sure if any running or hiking organizations do as much to maintain and improve the trail network.
8481	Keeping the ability to go off trail on occasion.
8516	We should as hikers be allowed to go off trail.
8531	Safety
8536	CMHC trail network!!??? Aren't they mandated to provide housing! Not trails? In a housing crisis, how can CMHC do anything with this land other than build housing?
8546	Horses need to be accommodated
8561	Indigenous use, environmental protection, non-motorized recreation
8596	Ensuring the area remains public in its entirety.
8621	Reconciliation and indigenous consultation
8641	these lands should be used to balance recreation and preservation/nature. however, as they are on the door steps of Vancouver, think that the trail network could be further developed to a) spread people out more and b) provide more types of trail & forest experiences. the current trail network is largely the legacy of rogue builders and serious thought should be put into what connections and additional trails it would take to meet today's needs
8681	Partnership and collaboration with whom?
8726	We should prioritize accessibility for people to use the trails for outdoors activities, which promotes a healthy lifestyle for all ages. it is very frustrating when you're trying to spend your day doing a healthy activity in nature and you arn't able to because they're arn't enough trails, no parking, or trails are not maintained.
8786	I feel like there should be more easy trails for people who have never been on a mountain bike before, but there should also be more sanctioned trails with very large drops and jumps for more advanced riders to session and have fun on
8791	Create mtb trails for kids
8806	No
8841	Volunteers have spent hundreds of hours creating safer, more accessible trails to improve wellness and recreational access. These efforts should be recognized and supported.
8861	This place is one of the few places left in the lower mainland that isn't overly regulated. There are plenty of places for people to go who want that atmosphere in nature. Please leave this beautiful place as close to the way it is as possible. It is a treasure :)
8876	I think trail maintenance costs needs to be considered- ie, is the activity appropriate for the level of trail maintenance required, and how light is the footprint on the area (ie ripping up of the flora/fauna.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

8886	Trails should be a safe and enjoyable experience for all. Being mindful of the few east to west trails is critical as it means that bridle path is a central path for all users, and that is often where conflict happens between hikers and bikers. It would be far preferable if there was an alternative for bikers to cross separate from hikers.
8916	continue with the multi-use nature of the trails
8951	Existing trail stewardship efforts
8966	It is important that the neighbourhood is not negatively impacted as the trail users increase. Find access points that are not disruptive to the neighbourhood.
9006	The area is wilderness, and as such it harbours risk. That should not change. It is not Stanley Park.
9076	Keep it wild. Do not feed or harm the wildlife. Keep it clean. Be courteous.
9101	safety, and this includes in way finding Government (Federal, Provincial, Municipal, CMHC) should not be involved in any way. It is perfect the way it is. Certainly does not require a bunch of paid bureaucrats to come up with a bunch of rules to protect us from ourselves.
9106	Understanding the history of the trails and the legacy that carries for the community
9151	Trails need to be maintained
9171	No loud music and being courteous to others who are sharing the trail
9181	Be careful of overuse
9221	Mutual respect
9226	Not sure what you mean by equitable access. I don't think they should be paved for wheel chair access.
9256	Build good, sustainable trails. Try to create more trails that separate mtb from pedestrians by moving the bikers off trails like Bridal Path etc. Climbing only trails for bikes is a great idea.
9266	Don't dumb down mtb trails just because someone who may not know the benefit thinks a features is too hard
9286	Fun! Enjoying/ getting people into nature! Walking, running, bikes, whatever those should be key guiding principles that the others fall under. Also it's hard to answer some of your options to this question because I don't know the implications of what you're asking. Do I think more trails should be added to be inclusive and equitable? Yes, more need to be added regardless and that is a component. Current trails should not be flattened.
9311	The principles listed here are too vague. It's not clear what they mean. They use common buzzwords and sound good but they lack details and meaning.
9336	Trail variety, skills development, fun and interest
9361	Diversity of trails for diversity of people and activities to enable all to have the experience this amazing example of environmental wonder so close to a metropolitan city.
9381	Parking due to the huge influx of visitors has become a huge issue during COVID. I do not know exactly what the CMHC can do about this single-handedly, but support should be given to the DNV for addressing this issue, which is a huge challenge for many residents living close to the trailheads.
9421	Restrict parking around the Berkley and Hyannis areas. Establish a designated bike lane along Berkley so that bikers can leave their cars further down.
9431	Indigenous rights and access
9441	Freedom of access.
9456	Preserving and improving the majority of the trails. Making new or modify existing trails to make them easier to ride. Enforcement of rules including irresponsible dig owners.
9461	Trail exits at Hyannis and Anne MacDonald Way (Old Buck Trail) need double staggered barriers to slow down trail bikers upon exit. Single barriers don't seem to have any effect.
9516	Keep it fun and challenging for MTBers. These are world famous trails with a big heritage.
9561	There is a need for different types of trails (i.e., flat direct connections that will not flood, mountain biking trails, walking trails, etc).
9586	no
9591	Preservation of North Shore MTB cultural values, as exemplified by maintenance, and restoration!, of the historic technical trail networks.
9621	Allow off trail access so we can work on developing our navigation skills like reading contours and navigation in the forest.
9631	long term planning to ensure these trails and land use remains open to recreation - it is such a vital aspect of most of our daily well being
9671	It's a wild forest, we should keep it that way as much as possible. Even with a million signs, people are dumb and will get lost (look at drivers for example). Lets preserve the wild and

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	exploratory aspect of the forest. Honestly, I don't think anything should change from the status quo.
9711	Legacy. These trails have history, which is part of the allure for many. If wrong measures are taken they will completely lose the charm that attracts many (ie. if they are too "safe" or family friendly by removing features, if the bike trails are turned to bi-directional multi-use trails... etc.)
9761	People are pooping in the woods a lot!
9806	Everything is pretty great just the way it is.
9831	Cell coverage for a dead to trail maps in case people can't find their way which I often. I'm often giving directions to stranded people.
9836	Can't think of any
9846	Let volunteer trail builders/orgs do what they do best instead of government getting involved.
9861	Although this may be touched on in the stewardship principle I believe that sustainable management practices and principles and education of these practices are very important to keep people engaged and safe.
9866	If it can't be maintained, don't build a trail or deactivate it when not in use. Occasional off trail use should also be encouraged, it is a pretty safe area. Orienteering is one example of off-trail use that allows us to see what else the area has to offer with minimal damage.
9876	Open access with a focus on the recreational pursuits and allowance for a variety of activities.
9906	Please rename Indian River road
9911	Sustainability - mountain biking and hiking are getting more and more popular (since the pandemic especially) - this incredibly important trail network needs to be recognized for the value it holds as a truly world class biking destination, and funding for maintenance and expansion of trails should reflect this and be enough to keep up with increased traffic each year
9996	Off-trail access
10031	I am a resident of the upper part of Blueridge/Berkley Rd area. Please please consider the many issues we have had with parking over the past 2 yrs as this area has become more widely used. Our quiet neighborhood has turned into a hub of activity with cars making U turns in front of our homes all day and evenings, people milling about on the street (usually with bikes) and blocking the roadway, and much much more noise.
10036	Increase trail use etiquette/education for hikers & dogwalkers. Encourage them to participate in trail maintenance. Lower trails more heavily used by foot need signs to 1) stay on the trail and 2) directional signs - I often have to help other riders that are lost or confused. More signage indicating who builds and maintain the trails would be a real bonus. Hikers I meet say the MTB community is "wrecking the trails" - the ones who build/fix them
10041	Consideration must be given for the residents living close to the trails. There are obnoxious trail users constantly blocking the road and littering/speaking loudly throughout every weekend. The more accessible and welcoming the trails are made, the bigger this issue will become.
10086	Reconciliation with Musqueam squamish Ans tsleil waututh
10116	Being out in nature (regardless of how....) is important / helpful for mental health
10121	Rules of access for EMTB
10136	Stop dog walking businesses leaving dog poop everywhere (it doesn't seem to be a problem with individual owners but dog walker businesses do not clean up after so many dogs!)
10161	The orienteering community routinely practices timed map-based navigation skills in forest areas, making use of both the trail network and the adjacent forest lands. The off-trail component of orienteering is crucial to executing accurate navigation in unfamiliar terrain. The number of orienteers relative to the number of trail system users is small, and orienteers traverse the terrain individually (not as a group)
10176	Signage including equestrian use, is a help to let everyone know who is allowed. e.g. Baden Powell = no bikes and no horses
10191	Engagement with the equestrian community of the North Shore
10201	Mountain biking has lead to the economic, social and recreational culture on Mt Seymour and it is a world renowned mountain biking site. We need to do everything possible to continue to promote mountain biking in the area.
10246	Meeting the demands and actual needs of the users. What I mean by this is mountain biking has increased its participation by a huge amount in the last couple of years. Even on a January weekend, the trails are packed. People are pumped on mountain biking, yet I feel as though the enthusiasm is not matched by Metro Vancouver. We need more mountain bike trails and more trail builders and it is not NSMBA that is preventing this from happening.
10251	This is indigenous land. Return stewardship of this land to the traditional inhabitants. At the very least, make an earnest effort to engage the relevant bands in this process and the ongoing management. Any land management initiative which does not start from land back is furthering colonial dominance/oppression of indigenous people and their cultures. Please

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10271	think about this very seriously and make a radical divergence from the destructive norm
10306	More trails!
10306	Open up more park and recreational areas to take the pressure off the existing network of trails.
10311	Inclusivity, respect for all activities and their patrons
	Environmental focus
	Sense in community and pride in local networks linked through mutual appreciation for nature and sport.
10316	Respecting and acknowledging indigenous land rights and ensuring they are consulted
10406	I'm not really sure what "Partnership and Collaboration" means, but if it would help avoid situations like the sudden appearance of No Trespassing signs (as happened a few years ago), then it's important.
	I'm not sure that I rate "economic benefit" as important at all. Providing access to the woods is very important and is why so many of us live on/come to the North Shore.
10426	There should be a giant "no uphill traffic ever" sign at the bottom of John Deere.
10456	User groups should be ranked in importance and for trail priority by amount of trail work done.
10466	The lack of signage is very hard for first timers & novice riders - which ultimately, makes the barriers to entry even higher than they already are.
10476	Fun times
10511	There are a lot of users that need directions. Easier/More signage ? I help someone seemingly on every ride.
10561	Continue the provision of challenging mountain bike trails
10641	I feel there should be more regulation and control over the excessive number of new bike trails that keep being built. I feel there's too many. A lot of them are 'hidden' but I know where they are.
10661	Keep commercial hiking groups off the trails. They don't stay to one side when passing
10681	Land acknowledgment to the Coast Salish
10746	No
10766	More mountain bike trails that are more accessible to all level of riders!!
10831	Don't ruin a good thing
10876	Protection of the land from development. These trails are extremely important for health, fitness and getting outdoors, and this green space needs to be protected for future generations to use
10991	Health of the ecosystem. Wildlife disturbance. Access density (there are currently too many trails, too close together).
10996	There is current inequitable access to trails. Mountain biking trails far outnumber any other type of trails.
11051	Minimal human impact; don't overdevelop/don't develop more than it is
11056	Parking that respects residents located at the trailheads and perhaps a sign or two reminding hikers/ walkers from other areas to respect residents' need for peace and quiet.
11096	Less of the work to continually make the trails easier to ride. LESS signage. Keep the terrain natural. Many trails have lost original allure that made them world famous. Everything is being made so easy to ride and to navigate that they are now getting overcrowded and less fun and challenging. Not necessary to take trails that require skill and simplify them so much that everyone can ride them. There are other destinations for novices.
11111	Respect for access to all activities/users.
11131	I would like the CMHC to stop referring to this as "CMHC / federal land", when it is unceded territory of the Tsleil-Waututh Nation -- who live just downhill and have important cultural sites in the same watershed -- and potentially the shared territory of other nations (Squamish). I think a guiding principle would be decolonization of this land and reconciliation with the First Nation(s).

Summary for S3Q16 [1]

What are your priorities for the CMHC Mt. Seymour trail network?[Ranking 1]

Answer	Count	Percentage
Improve existing trails (A2)	464	27.26%
Add new trails (A3)	647	38.01%

ID	Response
111	Active transportation trails that accommodate wheelchairs and strollers at the lower levels between access points.
126	All trails within CMHC are open to bike & foot traffic. New trails should be both both users groups but with priority assigned and directional for MTB. Extend single track climb higher. New MTB descent trail between Boogiemans & John Deer. Connector from Dale's Connector to Upper Severed. Continue to work with NSMBA. More financial support to NSMBA & trail builders.
131	Parking at the trailheads. Many people come from outside of Seymour to use the trails and even families in Blairridge with small kids need to drive to get to the trailhead. It would be great if there was a parking lot created at the end of Hyannis.
146	Re the second to last question above (I left blank): I don't feel the need for the creation of new trails. Some trails are more travelled than others, if you want to escape "crowds", there are many trails that are never in use - at least not at the same time by everyone. Most people that I encounter - walkers/hikers and dog walkers - stick to their regular/routine route. There are lots of turn offs to take a trail less travelled.
181	More dog poop bins and enforcement at trail access points (e.g. Tompkins, hill drive).
201	NO land development!!!! Keep as many trail connections as possible (e.g., Closing the Cambodia Trail connection to Cabin Trail was a mistake). Don't over plan the area. Hikers function with different levels of wayfinding and physical abilities: keep trails that accommodate that full range of abilities.
211	Assure permanent access.
216	A skills park or pump track in the Blair range access area near McCartney park would be a massive benefit. this would increase space for new riders and children to develop skills, create a more used access route to the trails and relieve some pressure from the Hyannis and Berkely access point.
246	The XC mtb trails can get very busy in peak season. Having more trails would distribute the activity, reducing how crowded the trails get.
286	Always maintaining existing network first.
306	I wouldn't mind Motorcycle trails.. I can dream :)
316	We need more trails.
321	Add more challenging trails
356	Preserve the trails as they are in perpetuity.
391	Mountain bike "all-mountain" trails which mix ascending, descending and include technical challenges.
426	We need more advanced Downhill mountain bike trails
446	keeping the current trails in great condition
456	Proper washroom facility. Check out the washrooms in Cumberland. These are designed for use primarily for the people and riders about to enter their area trails. Full plumbing heated with daily visits by a attendant. They have 2 lockable bathrooms with each one having a flush toilet sink etc. This should be located next to the old buck lot
561	Working with the people / groups who have already put in time and effort to providing this recreational asset to the community.
591	Ensure preservation of historic MTB features and trails
691	More flow, less chunky rocks pls
711	Consider not shutting down unsanctioned trails if they're built well, ie: proper drainage management, robust construction, adding challenging trails compared to sanctioned ones. Unsanctioned trails will always be built, if the need for more difficult terrain is not met. Currently, the highest difficulty of trail is significantly less than some of the desirable unsanctioned lines.
721	Access and parking could be improved to take pressure off those current popular points.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	Northlands Drive is an untapped access point
786	Trails need to cater to core user group, who spend the most time advocating for, maintain, creating, and using: mountain bikers. The number of beginner riders is greater. However, they are new to the sport and have plenty of variety to learn on across the entire north shore. Expert mountain bikers need trails to express themselves on, or further rogue building will take place.
796	Develop more double black trails.
846	The Blair Riffle range is an under-utilized area that offers rare unused flat land to build parking, beginner trails and skills park.
861	Yummi tech gnaaarr
936	Preserve the world renowned trails, reputation and lore of north shore mountain biking that fostered an entire industry and brings tourists from all over the world.
996	Finding a reasonable location for trail head parking and vehicle management
1001	For mountain biking there are a lack of jump trails. Other areas are far more advanced in this area such as Whistler, Squamish, Pemberton. etc. More should be done to make mountain bike trails accessible for younger riders.
1066	Update signage - the existing maps are out dated and don't show the existing trail network accurately
1076	Mt. Seymour trails are close enough to attract hoards of people (i.e. Quarry Rock in Deep Cove overrun by selfie-takers on foot). Plan trails and access to handle increasing numbers of trail users in a way that minimizes conflict and maximizes safety. Engage the whole community to minimize "braiding" trails by foot traffic, and make ALL users aware that they have a responsibility to do trail work or provide financial help toward the trails.
1141	Please please please don't allow mountain biking to monopolize on capital gains for your network. This shouldn't just be for mountain biking and that's what they advocate for. I think you need to standardize your trails by first classifying the and develop standards for them.
1161	The current network is archaic. Majority of trails were built before any sort of standards or planning were considered. To just attempt to maintain current trails is futile
1196	If there is a way to improve parking or a base(s) for folks to start their activities from that works with the residents. A location that could have a bike wash, amenities, etc.
1336	Create more mountain bike trails.
1351	Cross country options are lacking. I really wish the Blair range could be turned into a beginner xc mtb and trail running trail network.
1411	Maintain the nature of the existing trails
1486	Dogs ! Let's us walk our dogs here
1506	Mtb Trails are not challenging enough, to upskill one must travel away from this area
1601	Mountain biker and hiker trail sharing awareness
1611	Stop denying access to others and making it only for Blairridge residents
1681	More trails should be the number one priority on Seymour as the demand far exceeds the capacity of legal trails.
1691	There's always a question of maintenance... the hiking trails in the area see no maintenance an as such most of the hiking-only routes are awful. It would be nice to have some hiking only routes but who will take care of them? Some trails like the hiking section of Baden that goes straight up a creek could be re-routed for a much better experience.
1726	Develop kids trails, or more green circle sanctioned trails
1746	Keep what we have and add. Rather than make everything the same
1751	Expand expand expand. Look elsewhere and learn from there expansion and what it brings to the communities. Look around it's a mtn biking / hiking / back country epicentre for these sports. Realize this, accept this and improve and expand the network. Rogue building of not only mtn bike trails but hiking trails as well, trust me I use both. This will not end until you show signs of wanting to expand and learn from what the community wants.
1811	Yes. Building NEW trails is very important. You should really reconsider your view on this.
1841	More picnic areas at the bottom
1916	Mountain bike trails do not have to be climbing or descending. They can be both to better serve beginners and at the same time, consist of low grades and speeds, lending to a multi-user demographic
1956	Extend Good Sir Martin up to Corkscrew
1961	There should be some green and blue trails added for beginner mountain bikers and children. The North Shore has a steep learning curve. Look to Whistler for examples.
1976	Increased difficulty Mtb trails are desperately needed. Natural steep features and big jump & drop features are missing in the network. Otherwise, the large population of high level riders simply go build their own in a possibly unsustainable manner, only wasting land manager resources to fight it. Embrace it instead.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

New hiking specific trails are also needed desperately, to move the new surge of hiking off high speed mtb trails.

2036	Do not dumb down the trails
2061	Maintain the historic significance of north shore mountain biking on the world stage recognizing its unique feature set within the trails.
2136	Try to maintain technical difficulty and provide optional lines on biking trails. This allows a mix of skill levels to be able to enjoy a single trail. If there is concern about beginner trails, or making easier trails, those can be adaptive trails that beginners and intermediates and quad bikes can all enjoy. I've been mountain biking on Seymour for 36 years, and despite bikes becoming far more capable, the trails have become more simple. Sad.
2141	EMTB is my priority
2151	Trails not made of rocks as if a Roman road is the nadir of mountain biking.
2176	Keep the challenge of the black trails, stop making them easier.
2181	Don't shut down old trails, let them be rehabilitated by the NSMBA
2351	Need to educate/regulate those riding e-bikes. These bikes allow much higher speed on mixed use trails (typically flat/uphill, where regular bikes are limited in speed anyway, so trail conflicts are much less of a concern) which greatly increases the risk of accidents and conflicts.
2446	More light and blue downhill trails which are maintained for that group of riders
2471	Revitalize the existing network to help modernize the trails and improve user experience. Most visitors to this area find a number of trails in the CMHC area to be needlessly difficult and primitive compared to more modern trail networks elsewhere in the province.
2481	A climb trail to the top of corkscrew from Mushroom trail would be amazing, but it appears this crosses onto DNV land.
2636	Introducing NSMBA standards to the trail building and maintenance process should be a priority.
2641	Multi-use trails tend to result in the highest incidence of injury. Inclusion comes from creating more trails that service either hiking or biking. Not both at the same time.
2666	Stopping trail braiding. Keeping ppl on the trails we already have. Combatting non-sanctioned trail building.
2681	Allow trail maintenance (eg by NSMBA) Encourage trail days Fix mid section of Severed
2701	Seymour has huge potential and is already a good mountain, but more trails would definitely better. They should be different trails, personally I would like to see more technical double black trails, as all the latest trail work has been for rather flowy/easy trails. I do think Seymour has great trails for beginners, but as an expert rider I would love to see more harder / technical trails. Fromme is better for this than Seymour at the moment.
2711	Improve parking at trailheads so people living in the community are not inconvenienced by the number of traffic in the area
2761	Don't shut down any more trails. Less trails only increases risk of conflict.
2766	Hiking loop trails in the vicinity of (but separate to) the biking trails, clearly marked. There is limited hiker access into the GSM/JD area - Bridle Path/Baden Powell/Old Buck make a very wide loop around the series of trails between C-Buster/SeveredD/JohnDeer. As a parent who sometimes rides, and sometimes walks while my family rides the trails, a walking trail in this vicinity connecting Bridle Path to Baden Powell would be desirable.
2841	repair/replanting of existing trails and environment. There has been a huge change to the erosion of the trail systems since Covid. Decommissioning of unauthorized trails and jumps etc.
2846	1. Downhill biking trails should not be a pedestrian trail especially when the trail is flowy. An example of what NOT to do is the new Social Distancing trail (built in 2020) which is downhill biking only. It is boring & hard to ride the corners downhill. The old route in this area was fun & perfect for biking downhill. Now it's designated for uphill biking only & hikers. These two trails should be opposite. 2. Do not dumb down difficult sections
2851	Working to make ebikes illegal for use on CMHC lands. I have tried to contact the province on this and the District of North Van as well...thinking of the fact there is a motor and a battery there is a risk of fire...and after this year.....if the issue of ebikes is not addressed and soon it will get out of hand and be a real headache to fix. Most whom ebike are not real bikers, knowledgeable and the increased use means increased wear.
2861	Trails for dogs to be off leash (and under control, with good recall)
2876	Not much change is necessary, just maintenance of trails.
2891	Long term future of trails, some peace of mind that the land won't be sold for development. These trails are so important to the people of Vancouver.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

2901	More trail markers and signage
2936	Mountain bike traversing trails. Today most trails go up or down. Many of the down trails are too hard for intermediate bikers. More back and forth trails would provide more accessibility.
2951	Climbing access from the top of GSM to Mushroom Connector and the top of Corkscrew
2961	No more trails! Leave the remaining land for wildlife and indigenous plants and trees. Stop developing every inch of the North Shore.
2986	Bike clubs funded by profitable bike businesses, who consequently benefit from advertising on mountain bike web sites, thus creating a corporate funded monopoly in natural areas. E-bikes are coming that go faster, further and capacity for off trail. Digging around trees can negatively impact important dependencies between trees and fungi. No comment on wildlife impacts. WHAT? There is NO ENFORCEMENT for illegal trail building. NATURE LEARNING.
3001	It's pretty amazing as is, don't ruin it!
3021	What are adaptive mountain bike trails? Are they for e-bikes or are they for mountain bikers with disabilities?
3031	If we can't add trails then smoothing out some of the existing trails could make them more accessible to novice riders.
3061	Noth shore attract world-class mountain biking. This sport is important for my health, wellness, sense of community and fitness.
	I always wonder about the number of dog walkers that use those trails. Most are really good. But some let the dogs off leash which can have mixed results. A priority could be to encourage on-leash.
	Also parking hours at park gate could be extended to relieve the parking issues at old buck.
3076	More flow trails that are suitable for beginner/ intermediate mountain bikers.
3106	Environmentally sustainable
3166	Clear signage for single use trails.
3196	I would not like to see an increase in the trail network. I believe we have a lot of trails to choose from and would like to see the remainder of the forest kept wild, in it's natural state.
3256	Historical education signage
3271	Improve parking
3326	Would be great to have more cross country style trails as well as gravel bike trails.
3421	Keeping adequate wildlife corridors by reducing close cross crossing trails.
3426	I've often directed newcomers, tourists on trails. Eg. There's no signage at the bottom of empress to indicate it is a downhill only trail for bikes. Often folks are trying to ride or hike up.
3461	CMHC lands are generally working well for current user load. Got a little busy during early COVID - but has lessened. I pity folks that live at Hyannis Point and Hill Drive due to high access levels on narrow residential streets. Perhaps access / parking on the Rifle Range would ease the high user load from residential streets.
3471	Despite political and environmental challenges, "no net new" trails is not tenable given growth of mountain biking. This simply results in rogue/secret trail building activity which is already well known. If you compare Seymour to a place like Squamish, it's frankly embarrassing how slow trail development is.
3496	More beginner friendly MTB trails
3561	Some areas are really wet and therefore less accessible; would be great if we have some bridges or boardwalks there
3581	Make down hill primary mountain bike trails only for mountain bikes. There should be signage for trail runners and hikes to stay off as it's very dangerous to the biker the sudden appearance of a person on a trail at speed. Very dangerous!
3586	Ignore the Blueridge Homeowners Association
3616	Signage should be the biggest priority, I always access the trail network with a map on my phone because it's otherwise very easy to get lost in this trail area.
3651	Dogs should be ON leash!
3671	Off leash trails
3691	More access to river that is safe.
3711	I think variety of difficulties of trails is needed
3716	Trail running- not sure if this is included but it's a 3 way share so hope they are included in this plan
3721	Not adding new trails is incredibly shortsighted, and will ultimately make any other activities wholly ineffectual. The status quo of pushing tourism and further activity in our mountains without backing it up with proper funding for maintenance AND expansion of our trail network is part of the problem of increasingly dangerous incidents, overburdening our local SAR teams, and making one of the North shores greatest assets unsustainable.
3776	Parking needs to be addressed to take the load off residential streets. Large parking lots

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

3836	need to be added at the most popular trail access points. Am not a fan of the last two question ranking formats. It tends to artificially rank some selections that I would want at the bottom of the list, but because they are all ranked, they wind up too high.
3846	Keep the natural beauty of the place for users and wildlife.
3876	I don't personally need or especially enjoy universally accessible trails, but there are relatively few universally accessible trails. This area is fairly close to various parking options, so it seems like a good idea to develop accesible trails if possible.
3896	Minimize land development for housing on Mt. Seymour. We are losing huge swaths of land to housing on both Grouse and Cypress and Mt. Seymour is a beautiful mountain forest worth saving.
3901	More trails, clear signals and maps and connections.
3951	Nope
3981	improving trail etiquette, communication and understanding between the different user groups. 95% of the time it is good.
3991	if you want fewer conflicts focus on connecting and improving longer xc/am mtb loops or routes instead of downhill-specific trails where terrain allows
4011	Parking could be improved upon.
4086	Difficult mountain bike trails
4156	Don't change existing trails
4201	Build more trails !
4216	The north shore has drastically fallen behind the rest of the sea to sky corridor In terms of sanctioned trails that accomodate advanced, and expert riders
4236	More jumps
4251	Flow jump trails
4296	Work with the existing mountain bike community to build, and maintain trails that cater to expert mountain bikers
4356	Larger variety of mountain bike descent trails. More flow/ jump trails and more trails with a higher difficulty.
4361	More Black-Diamond and large Jump trails are needed
4371	All conflict with hikers are with inexperienced hikers.
4436	There are enough trails in the area; they just need more support to ensure their longevity. I believe there are more than A sufficient number of trails for hikers and bikers. Adaptive access for sure needs to improve.
4456	Double black descending mtb trails - even pro lines!
4591	No
4611	Just improve existing trails because they are all great for improvement, but please make new more advanced high speed or very gnarly trails.
4631	Please do not increase the number of hiking only trails
4701	Create new trails ,better parking
4706	Build MTB trails for all levels.
4726	Use "loamer" mountain bike trails as a framework to build them up and create new sanctioned trails.
4776	More jumps
4801	Continued involvement of the community MTB groups!
4846	EDUCATION
4856	Add signage to all intersections, including at the bottom of downhill trails, to improve wayfinding and as an educational opportunity for mtb primary trails
4891	More jumps, more flow, bigger features
4956	Pass on the left. Move to right to let others pass This is hiker etiquette Etiquette is the one missing piece
5026	It would be really good to get a Jump Trail from top to bottom. I'd say in a style like ALine in whistler (I know it not possible in this scale but something like it) a lot of people like fast riding trails, stuff were you can leave your brakes open for a while
5101	Mountain biking
5196	Building flow jump trails with drops and jumps.
5231	New challenging trails Add more double black trails. The north shore is slowly loosing it's racking as one of the most progressive mtb areas in the world. This was why mtb companies set up here. It's why people travel here from around the world.
5256	MORE TRAILS!!!!!! I understand the environmental impact, so build them between the current trails, don't expand outside.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	You have a problem with unsanctioned trails because there is not enough sanctioned trails for the community. This is the premier destination for mountain biking in the world and it is standing still as other communities (Squam/Whis) pass it, this is going to have long-term economic/community impacts that will be irreversible.
5276	More facilities at trail heads. A bike wash at Seymour is essential, just as it has been very beneficial at Fromme
5326	A well defined process should be set up so trails of all kinds can be made(here and across the North Shore), especially ones that will be constructed by the trail users without city money. Requirements should include, a need for new trails, minimize damage(build around trees), safety things/building strong features that will last, drainage, etc.
5396	As an orienteer I enjoy this area for it's opportunities for off trail navigation. I don't won't to see off trail usage restricted to our group for the couple of times a year that we use the area.
5516	World class DH track capable of holding sanctioned races
5621	Provide stewardship when engaging with other land owners (e.g. DNV, Metro Van) to ensure a more unified vision and planning around trails on Mt Seymour.
5626	I would like to see a priority that defines trails by skill level. I would like to preserve and maintain existing "black diamond" trails, as well as see the option to build more "black diamond" and "double black" diamond trails.
5636	From my experience people seem to get along fairly well.
5651	Mountain biking is incredibly
	Harmful to the environment and is the main cause of the spread of invasive species - more needs to be done to work with this group.
5656	Work with North Shore Mountain Bike Association to help manage the trails - they know what they are doing!
5736	I'd like to see a couple of mellow, universal trails for parents w/strollers, people w/ accessibility issues, etc. Just no more equestrian stuff. Ever.
5766	I think the new mtb trails can be multi use
5781	Pumptracks, skills center for kids and green/blue trails for all the new riders and kids.
5836	No added beauracracy, please. The current trail network has provided the opportunity for the increased usage. This land is owned by the citizens through these public entities and special interest/volunteer groups of citizens have and continue to do great work with good intentions. I don't see the value of this exercise or this entity.
5866	Off leash dog walking areas or time zones
5881	This is a tough one, I'd love to see more mountain biking trails in the area, but I understand and appreciate that there are other trail users in the system. Hiking-only trails seem like a no-brainer, especially ones that remove foot traffic from downhill primary trails for obvious safety reasons.
5886	New long green/blue mtb xc loop for newer mountain bikers. Parking facilities.
5906	Don't just focus on climbing and descending trails. Need a connected cross country trail from Deep Cove to Horseshoe Bay
5921	I think cohesion with the existing network in terms of look/feel
5961	Collaboration with adjacent land owners/stewards. This trail network extends beyond the CMHC border.
6041	More green and blue rates trails in this network would be beneficial for kids and families learning to mountain bike
6056	*** We Need a cohesive ebike plan that will ban e bikes equipped with throttles and allow ONLY Pedal assist bikes. I have seen full electric motorbikes on the trails.
	We need to have non bike trail users be more respectful of the trails.ie Stop leaving garbage and dog poop bags and braiding trails.
	We need to ban off leash dog walking especially commercial paid services.
6106	Transit or parking solutions that help to limit the impact of people coming to these neighbourhoods to enjoy the area
6131	more entry level (green) bike trails for kids and beginners.
6166	Environmental conservation especially erosion control / reduce braiding
6191	Parking
6201	Parking :)
6291	There are not enough beginner and intermediate mountain bike trails on the shore, making it hard and intimidating for new riders to learn.
6311	Limit the use of climbing trails by e-mtb or promote more etiquette.
6321	no.
6401	Water station
	Bike tool station
6421	More double black trails for mountain biking would be good, there are lots of blues and blacks but not many double blacks

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

6441	More difficult trails!!! The needs of the masses are certainly not being met, Seymour has a profound lack of jumps and harder technical features. We are on of the mountain bike Mecca's of the world and yet many other places are surpassing us in the amount of new trail infrastructure being put in.
6446	We need another multiuse/bike climbing trail
6466	Modern tech flow including jumps rather than jank.
6531	Green mountain bike trails.
6566	It would be great to see some lower mountain bike trails appropriate for young kids and beginners
6576	Maintain free access and do not restrict use to one type of activity.
6596	More trail development approved
6601	How is "no net increase" the current status? What?! The shore has such a unique opportunity to capitalize on this but it seems like we want to waste time decommissioning unsanctioned trails instead of finding ways to bring them into the network. Maybe a priority should be to cut the red tape for legitimizing trails.
	- Community engagement. So few trail days - and most are on week days during work hours. I can't give back to the trails and work?
6671	There is a tremendous lack of beginner friendly mtb trails on seymour as on the entire north shore. As someone introducing young kids to mountain biking this is a major frustration. There would be plenty of terrain on seymour to build gentle, flowy trails that beginners can learn on.
6776	The best trail running trails are the best mountain biking trails. We love the biking trails from here to Whistler and Vedder Mnts for what the biking organizations have done. We trail run as much as bike using the whole NS
6791	More trails, More signage for route-finding/ planning
6856	Standardized signage.
6941	Trail maintenance, more safety signage. Would love to see more trails (up and down) for riders. The hikers already have so many dedicated hiking trails and multipurpose trails; they hike Mtn bike trails all the time. I am an avid rider 2-4 days per week so see this first hand regularly. I also wish more people would park at Parkgate parking lot rather than Parkgate shopping centre.
6996	The NSMBA is delinquent in supporting trail maintenance. Volunteers do excellent trail work but are unsupported by the NSMBA. Builders volunteer personal time & money to care for the trail with no support from NSMBA. The NSMBA ignores requests for signage & no trails have RST standard signage. The only signage is by volunteer builders. The NSMBA also fails to work with First Nations.
7006	Really important to maintain existing mountain bike trails and ensure no loss of intermediate trails.
7031	Get it started
7101	Prioritize people, not domestic animals.
7121	If anything, education about respect for nature and other users. Though really, in that area, there is far less litter or disrespect than I see in a lot of areas. This must somehow be maintained.
7136	Garbage cans garbage cans garbage cans
7141	just keeping it open and accessible to use
7156	The public needs to be aware that when they use the woods as a bathroom, please bury the mess. This sounds crazy but I have a dog, and many friends with dogs that find human waste weekly. It's disgusting and people should treat their waste just like when a dog poops. Bury it if u can't put it in a bag.
7181	Continued access for orienteering
7211	An Outhouse just inside trail System access Of Hyannis dr for those that emergency poop within the trail network.
7231	The volume of traffic near the trailheads is severely impacting the understory. The forest by Mary Kirk / Hill drive is a wasteland. Even away from the trailheads, the understory is trampled back. DON't know what a solution would be - the only idea would be to restrict commercial dog walkers to keeping the packs on leash / on the trail for ~1 km, or spreading the commercial dog walking locations out so to limit the volume at any one trail.
7286	The mountain biker trails are too difficult for many riders and efforts could be made to have cross country fitness trails that are easy or green circle and moderate or blue square rather difficult black diamond trails of which there is an abundant number already.
7326	Access. More trail heads / climbing trails so different access points can be used.
7336	additional facilities: changerooms, bike washes, washrooms at trailheads
7421	Environmental restoration and protection of natural drainage and infiltration systems should be considered a guiding principle when setting priorities. I do wonder if there's an impact to

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	local and migrating birds and wildlife from night-time mountain biking and trail running activities and if we should be restricting access after dark?
7426	Equestrian safety. I do not currently ride but was quite involved in the past. When people do not respect equestrians serious damage to horse and rider can occur. Bikers/hikers/dogs should all keep distance and give horse and rider right of way. I mean it's a 1200lb animal. Let's be smart. A lot can go wrong in a split second.
7431	These lands are operated quite well as is
7466	Interpretive trails detailing the history and natural features of the area.
7511	Perhaps because the mountain biking trails are unscannioned, they are too hardcore. Squamish has long, flowy runs that attract a broader ridership. Provide more space, and the trails could become more than the mangled obstacle-course that they are! Seymour was a weekly affair for me (MTB, hike+ski, bike+hike, hike+snowboard); now, Squamish takes up much of that time.
7626	Double black mountain bike trails
7631	There's a lot of downhill trails by comparison to other uses.
7636	Nope
7676	Nope
7681	Any plan for recreational use of the site should take into account how trails appear on popular apps such as Gaia, Alltrails, etc., along with their associated social media 'presence.' Use of certain trails can be encouraged or discouraged depending on how these online tools are managed...
7786	"More" trails should not be dismissed outright as part of the plan definition.
7791	Off-leash dog areas
7796	Gravel biking Trails
7826	Maintaining or expanding the size of the CMHC forested area being protected (eg into the DNV area due east?).
7851	Trails where I can walk my dogs without encountering off-leash commercially-walked dogs.
7856	Could not answer above - questionnaire glitchy
7866	It would be nice to see a well maintained hiking trail from Old Buck to the Mt Seymour ski area parking lot, or an improvement to the existing trails to facilitate a better bottom-to-top hike.
7906	Kids trails
7921	I don't see the need for "more" trails but I think recognizing and maintaining some the "unsanctioned" trails would go a long way to providing more variety and take off some of the load from other trails.
7931	Maintenance
7966	Do a survey for Fromme
7991	Improve safety signage. Small children hiking fast biking trails with blind spots is dangerous! Parents can be oblivious to danger
8016	We need trails for beginners. As a father of 2 young kids there isn't any easy trails for them on the mountain.
8056	I cannot stress enough the need to address ebikes on the trails. They are destructive and a problem for trail use. No MOTORIZED ebikes on trails. They need their own net work or on adaptive trails only.
8121	More trails, Specifically higher on mountain
8216	As mentioned education and signage about trail etiquette, who has right of way of shared trails, who shouldn't be on certain trails etc.
8226	Improving/Maintaining the trails to minimize environmental impact. i.e. protect tree roots, channel run-off to minimize erosion. This should be a priority with any new trails
8236	An easy set of trails for small kids
8246	It would be great to have more beginner trails
8281	More mountain bike trails.
8346	Building more bike trails that are suitable for beginner and intermediate riders (eg more green trails) will increase the accessibility of the Seymour trails to a more diverse population.
8356	There are more mountain bikers than ever using the trail system. Putting pressure on maintenance and infrastructure. They are also the largest volunteer base. Both Whistler and squamish have embraced the sport/users and are active approving new trails. The District, CMHC and BC Parks tend to use NIMBYism to limit the trail use for MTN bikers.
8376	This isn't the late 90s anymore. Riding is here to stay. Given the mountain bike popularity explosive, overuse, and congestion, there is every reason to make adding more mountain bike descending trails a priority. There are many areas to cut new trails while easily maintaining the beauty and integrity of the forest.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

8391	Skills area for children and beginner mountain bikers. Small jump lines, drops, skinnies and rolls.
8456	Get commercial dog walkers a dog park to keep them off our trails. Or limit the amount of dogs they are allowed to walk. They can't control large groups of dogs.
8461	Off lease dog friendly trails.
8476	Orienteering. Off trail access is important.
8491	Continue to allow ebikés (pedal assist only) access to trails, it is healthier than shuttling and can still be a great workout for people with bum knees like me.
8511	As a mountain bike rider that does trail work I sometimes feel like we are treated like second class citizens compared to other trail users that do little or nothing when it comes to trail maintenance. a bit more respect would be nice. Cheers.
8521	Get all dogs on leashes.
8526	Recognize and "Approve" existing unsanctioned mountain bike trails
8531	Good cross country options other than just bridle path
8546	Horse riding accessibility
8596	There should be a provision to off-trail access for orienteering. These local events are run 2-3 times a year in the area by the GVOC (Greater Vancouver Orienteering Club). Orienteering combines running and map+ compass navigation to locate control points marked on a map.
8606	Fix drainage and low spots that create puddles. Improve/maintain existing trails with exposed roots and erosion. Widen multi use, multi directional trails for easier passing to decrease trail conflict
8636	Maintain allowable off-trail usage for activities such as orienteering, geocaching
8686	Access to areas that are off-trail is really important - mushroom hunting and orienteering are two things that need to keep happening in this area.
8691	Protect this land so that community can use it.
8721	More bins to dog walkers can discard poop bags.
8786	I feel like there should be more easy trails for people who have never been on a mountain bike before, but there should also be more sanctioned trails with very large drops and jumps for more advanced riders to session and have fun on. Lack of high speed trails with large features on them leads to more illegal trails which is fun for advanced riders because they don't have to deal with the masses of people on sanctioned trails.
8791	Kids beginner trails
8806	No
8816	Retain managed (permitted events a few times a year) off trail uses by environmentally responsible groups like by Orienteering clubs.
8821	Protection of intersecting waterways and run offs.
8886	Limit commercial dog walking. Perhaps more bins for dog droppings, as so many owners are not acting responsibly.
8896	Improve all-weather access. For example reduce mud and have better drainage.
8926	Hiking only
9006	Access and use appears to be the theme of this survey. That is a very narrow focus for a long term strategy. What about: (a) integration with similar neighbouring lands and destinations? (b) as demand increases, who is attending to parking, toilets, waste and other areas for attention.
9061	Dealing with all the dog poop. its really terrible on some trails.
9101	I like the forest and the trails just as they are... natural
9106	Involving Mt Seymour Resort with a hole moutain plan, so areas are not excluded.
9151	Trail maintenance of existing trails
9171	No
9196	parking
9201	My top priority would be to retain public access to these trails.
9221	Environmentally sensitive areas closure - informative signage that explains the consequences of entry - as in what damage will be done by inappropriate access.
9251	Maintaining access to current trail system
9286	Don't take away from what is already there and enjoyed by so many in so many styles, add to it!
9311	Don't spoil a good thing. Trying to formalize things can ruin them, as happened a few years ago when CMHC posted no-trespassing signs without understanding the current situation and use.
9331	Many more people use the trails and it gets quite busy. There is a real need to increase the number of trails in order to accommodate the increase in people using the area.
9361	Consider a parking solution at trail head similar to the newest one on Fromme Mountain - Blueridge has become dangerous for residents trying to enter and exit close to

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	Berkley/Hyannis trailhead.
9381	Better coordination with the other landowners and other jurisdictions such as the DNV, the LSCR, the province etc
9401	Options for east west cycle commuting
9431	Consultation with the local Indigenous nations to confirm names of trails, renaming Indian River road, ensuring new trails do not infringe on their unceded territory
9441	Very Very High Priority: Link the east-west trails together so it is possible to walk and bike from Blairidge area to Parkgate.
9451	Rain riding etiquette
9456	Enforcement of rules including irresponsible dog owners. Making easier trails for young people, and less experienced riders.
9461	I think all trails should be open to all users with a rule of mutual respect for each activity.
9506	Allow for off trail access
9516	Framework around eMTB usage.
9561	There is a need for a direct connection between Blairidge and Parkgate with a flat 3-4 m trail that does not flood. Our family would use this trail to walk or bike from Blairidge to Parkgate. Ideally this trail could connect near Larkhall Cres. to Northlands Golf Course (pedestrian/bike trail to the south). Alternatively, existing trails (near Tompkins Cres) could be upgraded such they are widened, given creek crossings and upgraded to not flood.
9586	no
9606	Water fountain at Hyannis trailhead
9621	Please Allow off trail access. Making "one way" trails can be problematic, for example, if I run thru the forest and get on a trail at some point in the middle, where I would not have any idea I just entered a one way trails, I could be running on the trail in the wrong direction without even being aware that I was doing so. I may accidentally surprise a cyclist who is going the other way.
9651	Off-trail Access for orienteering
9661	I'm also a member of the orienteering club and off-trail access is very important. The events the club holds in this area are very good and a big part of why I orienteer at all. Maintaining off trail access for orienteering events is a very high priority for me.
9666	Trails that do not allow dogs.
9671	As an active member of the Greater Vancouver Orienteering Club (GVOC), continued off-trail access is VERY important to the sport.
9696	Please continue to allow off trail use for orienteering. There aren't many events in the vancouver area where there is such beautiful forest to run through and continued access to the area.
9711	Previous two dont work ob mobile, but highest priority is: improve etiquette, and downhill mountain bike trails.
9761	Washrooms
9826	I do love the black and double black trails but another blue trail that leads to progression would make the sport more accessible to young adults, people new to the sport and those more experienced riders looking for slightly lower risk trails.
9861	Sustainable trail building and improvements are essential to ensure environmental integrity and continued enjoyment.
9866	Some trail areas become worn and expand into neighbouring land then a wide trail is created. Much prefer if the trails stay as close to single track as possible.
9871	Preserving north shore reputation for world wide standing in technically difficult natural forest trails for mountain biking, if there were more technically difficult trails and many famous local mountain bikers promoted them there would be good increase in tourism revenue for the future.
9876	Allow off trail use by responsible users. Orienteering is great in this area and allows the forest to be experienced differently.
9881	Clean up the dog SHIT!
9911	Keep the unique features and advanced nature of the mountain bike trails in tact. That is the reason it is a world class destination
9941	I am part of the area Orienteering Association and this is an excellent area for Orienteering - hope we continue to have access.
9996	Yes, it is important to keep off-trail access open for navigational sports like orienteering. This sport uses a mix of on-trail and off-trail navigation.
10031	As mentioned above, please consider the impact the expanded use of this area has had on the local residents. There needs to be a much better way of managing the volume of cars coming into our area. Blocking our driveways, the non stop U Turns, and the many people standing in the street with bikes is not acceptable. Thank-you.
10036	None I can think of. thanks for the survey! I can't express my thanks enough for the pleasure I

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	get from riding on Mt. Seymour, almost always on your land.
10041	Consideration for local residents. E.g, Do not build parking lots to encourage more trail traffic and don't encourage more trail users. Encourage existing users to be more respectful.
10066	connecting Blueridge area to Parkgate area on an easily accessed well-groomed trail to reduce vehicle use
10096	I like to walk the trails to Parkgate Mall, but it's currently a convoluted path of trails. Something more direct would be nice.
10111	Yes, orienteering and the ability to use the lands for off-trail access should be maintained within the management plan.
10116	washroom facilities near trailheads with running water
10131	Those liability signs that went up a few years ago are a horrific urban eye sore. We go in the woods to see nature, not more metal street signs. Ugliest decision ever. Please take those down.
10161	The MTB community has made huge positive contributions to the trail network on Seymour. However, unfortunately, some MTB users continue to build new 'bandit' trails that often have sections that quickly erode the steep forest slopes. This activity needs to be continuously monitored and these new trails closed off. This is a community issue, because we are talking about an incredible community resource.
10176	Pedestrians and equestrians can co-exist very happily.
10186	Maintaining access to off-trail areas for activities like orienteering.
10191	Safety. It would be nice if there were some equine only trails in North Van. A lot of the early trails were built and maintained by riders and a lot of people have forgotten this.
10201	If people want to build trails let them. It adds variety, new challenges and draws more tourism in the area.
10241	I use the area for the sport of orienteering. Therefore it is vital that access off the tracks and paths, into the forest itself, continues to be allowed.
10246	As a mountain biker, I would love to see more excitement for the sport that matches that of the mountain bikers. Squamish does a wonderful job of this. Our trails on Mt Seymour are getting crowded and damaged from over use. We need to spread the riders out and offer more trails. As a hiker, we need more loops that are well marked. Lynn Loop, Quarry Rock, and Grouse Grind are popular b/c they are well marked. We need more like this.
10251	Collect input on indigenous sites of importance and reshape trails to avoid these areas. Reshape trails to reduce interference with water courses.
10306	The rail use plan should consider the environmental damage of trail use. Mountain bike which are now motorized and functioning like motorcycles are very damaging on the environment.
10316	Making the trails above this marked area (north west) official trails.
10356	Please keep the trails open for orienteering!
10381	There are so many mountain bikers coming and using the trails bringing business to the community. Trails should be managed better for mountain biking and recognized for up keeping the trails for everyone's use. There certainly not hikers doing trail days and giving back creating trails.
10406	Probably a top priority for me is to maintain the Baden Powell trail, mostly access to it, but trail improvements when necessary. It is a North Shore thing that passes through the CHMC lands and should be maintained from Deep Cove to Horseshoe Bay.
10411	Trails should be checked periodically for drainage problems, they get quite waterlogged.
10456	Adaptive MTB trails, particularly uphill ones, are great for all mountain bikers. Faster to climb, smoother, still fun. Adaptive DH trails are still fun for everyone, albeit maybe not the tech trails some users love. Tired of mountain bikers always coming last on the priority list and having to yield to everyone on trails. Until other user groups do as much work, they shouldn't get priority.
10466	Signage
10476	Mountain bike downhill trails
10531	Please improve the trail at end of Tompkins by: 1. Adding a bridge over the creek and drain under the trail where needed. 2. Connect this trail to the existing paved multi-use trail on the low side of Northlands for multi-use (walking and commuter bike use).
10616	Easier/ intermediate more flowy descending trails for mountain biking
10641	Parking is a problem as you probably know. Don't overgroom the trails or it will become Stanley Park.
10736	Increase beginner trails for youth and beginning mountain bikers.
10746	No
10766	More mountain bike trails and make more for beginner and intermediate bikers!
10786	Build parallel sections of main artery trails like Bridal Path. Separate bikes/hikers or up/down traffic when current trail design creates potential user conflicts ie blind corners, narrow without passing options, steep incline/decline..

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10921	A much bigger/longer version of Empress bypass would probably be a good attraction. Throughout BC each mountain bike area had built one really long flow trail with a parallel climbing trail that's works for most abilities (meadow of a grizzly-squamish, lord of the squirrels-whistler, the Cumberland one, burns lake etc.) The North Shore doesn't have one of these which seems crazy to me
10961	No more dog poop
10991	Fewer trails in the area. Existing trails reduced and redesigned to a park standard rather than the ad-hoc, unplanned, arbitrary mess that exists.
10996	There needs to be more hiker friendly trails. Can't emphasize enough the disproportionate number of trails dedicated or dominated by mountain bikers over other user groups particularly hikers which are likely the larger user base in the general population.
11056	Access for challenged individuals is an important aspect of trail use.
11061	Do not restrict access to trails. They are a fabulous resource for locals and vancouverites in general.
11096	I hope when you refer to "improve trails", you are not talking about the continual "dumbing down" of the trails that we have seen in past years. This trail network did not become world famous as a network of "Flow" trails. It's the birthplace of "freeriding"! So many of our favourite biking trails have been dumbed down to the point of them being uninspiring. This is also serving to making them too crowded.
11111	My main use of the trails are for mountain biking and I want to continue to be able to use the trails for riding
11131	I think a careful analysis/consultation should be done with local black bear experts -- there have been "problem bears" reported the last few years in the upper reaches of connecting trail networks. If there are important food sources here (salmonberry or other bushes) or wildlife travel corridors then perhaps the CMHC and the public would consider ending the conflict and permanently giving space and land back to the use of the bears.
11161	Repair the Bridle path so it may once again support equestrian use.

Summary for S4Q19

Is there anything else you would like to tell us about?

Answer	Count	Percentage
Answer	429	25.21%
No answer	1273	74.79%
Not displayed	0	0.00%

ID	Response
126	Permit teeter totters.
131	This is great that you are looking at supporting this area for the community VS just developing it into housing. Not only do people locally use it, people move from other places in the world to be part of the North Shore mountain biking cultural.
146	Also, the existing trails are in pretty good shape, there are improvements being made all the time. The weather is unpredictable, and puddles form and grow/spread and trees come down, but I have no issues navigating, and they do get tended to eventually. I feel signage is adequate, as are the loops and connecting trails. People have their favourites and they tend to use the same trail
151	I find the trails I use are enjoyed by bikes and hikers of all types without any conflict, with considerate behaviour all the time
161	Please keep the trails open ! With thanks
166	thank you
171	Just glad to have these trails.
176	With increasing population on the north shore there is increased use of 'wild' areas and increased degradation of the interfacing forest ie folks not staying on designated trails, picking foliage. It might be good for developers wallets, but there is more to life than money for the wealthy.
181	I live in blueridge and use the trails every day.
216	Trails policies need to consider parking, washrooms and other amenities. This should be done in consultation with the district for land use. Trails are imperative, but ignoring the access, parking, and washrooms is creating resentment in local communities and entitlement to the area - the trails are public assets and should be available to everyone, but services need to be considered in concert.
236	Please help to prioritize equal access to all trail users, and do not make it more difficult for less able-bodied people to access the trails. The local community associations (especially the Blueridge Community Association) are fighting to reduce parking in their neighbourhoods and streets which will affect all outsider access to these trails. These trails are for everyone.
241	Do not overregulate! Do not have single-use trails! It's fine as it is! But signage is not good for people not familiar with the trails. The current signage with maps is terrible.
246	Bridle Path is a gem for many users, though I prefer more vertical on a ride.
251	An accessible connection between Blueridge and parkgate would be a great community add.
286	These trails have been actively used for many years by mountain bikers and many other users. But if it weren't for mountain bikers these trails would not exist. That legacy needs to be respected and access to mountain bikers needs to be a primary concern.
306	Those trails are awesome.. but we've seen a big increase in Mtb riders and hikers. They don't know anything about the sport and rules. Giving them tips to know more would be awesome. A sign at the entrance will not help much really! Someone or some days with a stand and someone giving these tips would be a great thing! And bring people together while learning together
316	More advanced/expert mountain bike trails, and an intermediate flow mountain bike trail would be nice. Achieving these should come as new trails rather than repurposing existing trails. Please continue to allow the NSMBA to provide maintenance to existing trails, and please consult with NSMBA on any changes to trails or new trails.
366	Would be nice to have drinking water fountains, more parking for busy weekends and restricted dog trails as dog walkers can cause accidents with mountain bikers
371	More parking and increase parking hours on parkgate park and mushroom parking lot during summer.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

426	We desperately need more mountain bike trails
436	Provide additional parking to avoid conflicts with residents. Old buck is a joke of a parking lot.
446	amazing trail network. We're so lucky to have this close to home!
501	Na
511	No
516	Support mountain biking!
561	Please work on overcoming obstacles in a way that considers the user groups. Certain bureaucrats have shown a tendency to look down on mountain bikers instead of working with them. If there are concerns with trails, go to the builder and discuss ways to make a change. If the builder is unknown, talk to other builders who would likely know them as an intermediary. Collaborate, don't take over.
566	You need to crack-down on e-motor bike use. Pedal-assist e-bike is one thing, but e-bikes with throttle are motorcycles.
586	
591	An inability to facilitate NSMBA maintaining current Mtb trail standards will cause increased user conflict and illegal trail building
611	More parking! Nobody wants to get in neighbor's way, but what are the options? Transit is limited for bikes (and a huge security risk putting \$6K bikes unlocked on the exterior of the bus) and you typically have extra gear, clothes etc that make transit impractical most of the time.
721	Yes. Due to the web of different land managers, could they work together on signage and access to provide a cohesive and consistent approach?
786	Consider a mountain biking staging area similar to the one at the school in the Garibaldi Highlands, Cumberland, etc Mountain bikers have no designated meeting point. This crowds parking, causes conflict with residents, etc.
796	CMHC land and the trails on it are a very important part of the lower mainland outdoors experience. Should be promoting and expanding infrastructure to support the growing population and outdoor communities.
801	The number of mountain bikers on these trails seems to have exploded since the pandemic and I expect numbers to stay higher even after it is over. Expansion of the trail network seems to have stagnated and is not meeting the needs of the community currently. It seems to me that conflict is becoming more likely as more people are forced to share a fixed number of trails. Please allow the badly needed expansion of the trail network in this area.
846	The huge increase in trail use from the pandemic has resulted in heavy pressure on the existing trail network on CMHC land. More trails and access is required.
861	I love your trails, thank you very very very much.
946	What we have now is very, very good, just needs some fine tuning for etiquette, safety and signage.
951	Please create access to mushroom lot via a climbable mountain bike trail
971	We need more jumps, drops and progression features. Places like the woodlot in Maple Ridge have much more diversity in feature difficulty which promotes safe progression towards larger features. The North Shore is not the haven of progression it used to be
1001	The North Shore revolutionized mountain biking making the area world famous and a significant location in the history of mountain biking. It has now fallen behind other areas in the sea to sky corridor. If the landowners can work together to reestablish the North Shore as the major centre for mountain biking it will continue to have a major social and economic impact that will benefit many aspects of North Shore life.
1066	Overall the trail network is a joy to use and the experience is pleasurable, and interaction is courteous with all trail user groups. As the desire to enjoy the outdoors increases, the existing trail network is being stretched. I believe that new trails are required to increase enjoyment for all user groups and diversify the difficulty level of the available trails. Additional beginner and expert (double black) bike trails are needed.
1076	I'd like to suggest again that engaging ALL users for trail work (or financial donations in lieu of work) gets more skin in the game and a far better appreciation of the trails and maintenance thereof. At present it's mostly up to NSMBA and members and staff to try to manage all the North Shore trails in concert with all the land management entities involved. More involvement means far less conflict and better understanding of trail etiquette.
1146	Mountain biking is the most important thing to me. Its great exercise and offers many benefits to my health and well being.
1161	Please consider using an experienced Land manager to oversee the development of a cohesive and process I've planned with fellow stake holders on the mountain.
1186	More advanced mountain bike trails plz
1321	Please ensure that the existing permitted trail maintainers are kept part of the process as

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	plans for long-term management evolve.
1356	I believe the only group of users that do regular trail maintenance are the mountain bikers, whether it's store organized, or club organized. If other user groups would like more access, perhaps they could be invited to participate in maintenance of existing trails to ease the burden of upkeep. The only exception to this is adaptive trails, as I believe more trails for adaptive use would be amazing.
1386	Gem on the North Shore
1411	Have been mountain biking on Seymour since 1999, through the golden era of the CBC trail, and into the new era of better climbing trails. Would love to see technical trail sections remain technical, and a restoration of CBC + climbing trails to the entrance of CBC
1461	There needs to be strict enforcement on trail braiding/twinning and leaving dog water in bags on the trail. These two things are plaguing our trail system
1486	Please don't keep dogs from being allowed off leash. They have so much fun
1611	Take away the no parking on Hill. There's absolutely no reason to not allow people to park there.
1631	All forest users should have trails and routes to use without worry. The current area has been developed with volunteer blood sweat and tears and the existing network needs to be protected and expanded upon. The volunteer groups that have primarily cared for the trails are mountain bike groups and this stewardship should be celebrated in future plans.
1681	I appreciate the opportunity for community feedback. I would just reiterate what I said in one of my other answers. Seymour in general should have a larger network of legal trails in order to accommodate the demand from all user groups.
1691	Don't wreck it. Seriously. Yes, the network is not authorized. But the vacuum previously left by the CMHC has meant that some of the highest quality building has happened in this zone. Embrace the community. Not everything is perfect but this area is an overall gem. Meanwhile, wherever DNV, Metro, or BC Parks is involved, things are either stagnant or worsening for everybody.
1751	Simply look at squamish / whistler / Oregon / Washington and so many more locations that they actually do move forwards with expansion not sitting idle doing nothing. Come on this feedback has been going on and on and I don't have faith that the north shore will follow in other towns / city's and locations improvement of trails and the network for future generations. Too much political BS.
1776	No e-bikes. Cause conflicts with other bikes. Move around way faster on multi use connecting trails. Damage the trails and cause additional wear. Often aren't respectful trail users. Have a motor and are somehow being used on "non-motorized" trails?
1786	Something needs to be done about the poo bags. More garbage and dog garbages at trail heads, more signs about safety of wildlife in terms of littering. More information on how to give back (trail work). More permits given to actually do the work - there are so many people that want to give back but can't/don't know how and are very frustrated with the system.
1821	EMTB bikes are way too fast on the flat/climbing trails. They are a motorbike not a bike and I find them dangerous. I hope the issues with the electric bikes doesn't reflect on the MTB community as a whole
1831	Better/more signage to prevent hikers/runner from running up mountain bike descent trails would be really appreciated
1901	Mtb is a great sport and people new to the sport need to be responsible to understand the challenges of the learning curve. There should be trail etiquette for e-bikes
1916	Modifying/updating existing black diamond trails will led to less rogue trail building
1926	Trails in the area are already over crowded on weekends Speed bikes are seen more and more and they go way to fast Affects to the people living in the neighbourhoods surrounding these areas should be seriously considered due to parking, noise and inaccessibility to exercise/walk dogs and children in their own neighbourhood due to high use and bikers.
1931	These trails have been a life line for me at times and I love to take my kids there.
1956	Thank you for engaging with the community and managing this land
1961	Don't allow the leaving of extra signs, Christmas decorations, etc in the forest. I get enough of that in the city. Sign at trailheads to not leave toilet paper in the forest or bags of dog poo. I don't care what shoes you hike in, just don't leave garbage behind.
1976	Support the NSMBA - the Trail Adoption Program leverages corporate sponsorship and volunteerism.
1981	Please keep up trail maintenance on the trails. The trails are very busy and get eroded quickly
2036	You have a phenomenal trail network that brings in tremendous economic benefits to the area, do not forget this.
2041	Keep the trails beautiful!

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

2091	Please don't remove or reduce trails. The CMHC trails are one of the best areas on the north shore
2151	The signage sucks. Big print labeling the district or the cmhc and tiny print for the trail name and directions is narcissistic and useless. As someone not from the area, I basically gave up on using your signs.
2176	All in all everyone seems to get on well on the trails. In over a decade of riding in this area, I've had few negative interactions, and strangley they have been with eMtb riders, often out of their skill set abilities on trails they should not have ventured on, so they probably just need education. .
2181	Don't give in to the small number of people who live at Hyannis and are trying to stop parking access.
2216	Most of the trails are for mountain biking. This may seem unfair but they were build by MTBers. The trails they maintain usually preferred by users since they are generally in better shape. When considering equity, consider that the current focus on MTB trails is due to the community and people behind it. If other users (hikers, runners, dog walkers) would like a similar trail experience, they should consider engaging their users too.
2221	Please improve signage at the bottom of downhill bike trails. Hikers/families walk up them and I've almost hit a small child
2251	North Van used to be the mecca while places like squamish and whistler continue to add new trails
2406	We live near the entrance to Baden Powell trails on Hyannis, and parking in the last ~20 months has become a safety concern around the intersections of Berkley/Hyannis and Berkley/Whitman. The District of North Van should mark locations before and after the intersection as "No Parking" to limit people parking too close to the intersection. Etiquette signage would also be beneficial to hopefully reduce the amount of garbage and noise.
2436	The North Shore mountain bike trails are such a heritage for the global mountain biking culture. When people from all around the world dream about mountain biking, they dream about the North Shore. Let's keep this alive. It brings so many people who are spending their hard-earned money on the Shore.
2446	I find that the two blueish downhill trails on Seymour get punched out regularly by bikers that can easily ride black trails, and the blue trails do not get maintained back to the blueish level rider they were intended for
2471	Thank you for engaging with the community on this. It is important that all trail users have a chance to share their thoughts :)
2476	We should limit evokes to specific climb trails. They chew up the climbs more than traditional bikes. Keep them on old buck or something
2506	I like going for hikes, but the area that's been outlined I would never consider hiking it. North Shore has so many other areas that are more scenic and has more wildlife.
2551	If you want to take a stab at managing the area, building and improving trails would be a good first step in earning the respect of the community. Ultimately the community makes all the decisions.
2566	Thanks for this important work to improve these places we all love to recreate in!
2581	Seymour is a world-renowned mtb area and significantly contributes to the local economy. CMHC would be foolish, and it would be contrary to the public interest, to restrict or 'dumb-down' the existing trail network. *More* mtb trails - expanding the network - should be the priority.
2596	illegal trails will continue to get built until local gov is pro-active and decides to work with local trail builders to build a variety of trails. Just look to Squamish and Whistler, the Local governments work hand in hand with local trail builders and have built 10s if not 100s of new trails in the last 5 years where Seymour and Fromme have gotten what...1-3 new trails? (Bobsled, Empress bypass and ???).
2601	The mountain biking trails in this area form the core of the trails on the North Shore. Please improve and expand the network.
2621	CMHC's trails, whether by accident or design, form a vital part of, and the bulk of, the trail network on Seymour. They are an incredibly important resource for residents of North Vancouver and beyond. In recent years, the NSMBA has developed fantastic strategies and programmes that have revolutionized the local trail networks for the benefit of all trail users. Based on vehicle counts at Trailheads, the popularity has never been greater.
2626	Thank you for the opportunity to share, and to listen to the community and its trail users. Seymour is the best place on earth! Thanks for your work.
2636	Safe and progressive modern mountain biking trails provide an extremely high return on investment in terms of property value and tourism generated.
2641	Get a shuttle service going!
2676	I'm concerned about NIMBYism, especially in terms of parking.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	The people who live there are wildly lucky in that they live so close to world-class MTB trails. Rather than restricting access to people who come from other neighbourhoods, we need to improve it.
2681	Be open to providing connection trails into surrounding areas managed by other land managers
	More coordination with surrounding land managers
2686	We love the trail network and its the only reason we moved to North Van. I'd also like to point out as a small business owner MTB riders continue to increase their spend in our community so keep building and they will keep coming.
2701	thanks for doing this survey. I work locally in the bike industry (norco northshore) and saw the huge increase in mountain bike sales and new riders. World-wide the northshore and sea2sky corridor are famous, and i do feel like North Vancouver could leverage this more and become even more popular for biking tourists etc. I would like to see new, challenging trails. Bikes have improved a ton over the last 2 decades, but ironically trails got easier
2721	make sure you are getting responses from the surrounding community who live next to these trails, and not just mountain bikers who drive in to use this network.
2736	These trails have been a daily / weekly source of life for me and my family.
2766	As one of 3 (potentially only 2 if Cypress is developed) accessible mountain biking locations on the North Shore, Mt Seymour trails allow for progression beyond the beginner trails of Mt Fromme (KOTS, Bobsled, etc) working up to blue trails (John Deer, Asian Adonis) with optional more challenging features, then black trails as skill and experience develop. CMHC land holds the beating heart of mountain biking at Mt Seymour! The trails are iconic.
2831	There should be a trail from where mushroom intersects with incline down to where power line access crosses with mushroom. This would divert a lot of traffic from descending on mushroom to get to John Deere and allow ascending mushroom to be more pleasant.
2841	There also needs to be more education to young and new trail users (and parents) (perhaps workshops in schools) to encourage environmentally sensitive use/sustainability. Often the young kids don't know that digging in tree roots to build jumps damages the ecosystem. They're encouraged to play outside but not encouraged to learn how to care for the environment they enjoy so it will be there for their kids. That goes for "fort building" too.
2851	Again, working to make ebikes illegal on CMHC property, which is easy as they are motorbikes and illegal on private property and BC Park lands. What we need is it to be in writing, posted and enforced. This would cut down on a fair amount of use and use above and beyond what a regular bike can do.
2856	Add signage to deter hikers from climbing downhill primary trails and keep dogs on leash. Some sections of steeper trails have little spots to pass safely.
2866	Get Metro Vancouver on board with consultations and out reach to the public like this.
2891	These trails bring so much happiness and calm and community to my life.
2906	People should not be parking in residential areas, if you can't walk, bike or bus there go someplace else!
2951	Despite being a mountain biker, the work by the NSMBA on Bridle Path is not good as it is making this arterial connector much faster for bikers. The work being done by the NSMBA is removing rocks and smoothing the trail and adding fast features and small jumps - not appropriate considering the amount of hikers/runners/dog walkers. There are bikers riding way faster than I've ever seen and I've ridden here since 95, someone's going to get hurt.
2961	Those of us in Blueridge have had our streets taken over by mountain bikers coming from all over the lower mainland. This really needs to decrease. Parking in bus stops, blocking in driveways, speeding down our little side streets. It is having a major impact on our quality of life, and is sure to cause more conflicts in the future.
2966	Surprised about the no trail increase point - trails have been very busy since start of COVID pandemic (which is a good thing because people are getting out on the trails, but bad because they are busy and worn from heavy use)
2986	Smaller species of mammals and amphibians treat trails as barriers because trails create open areas for predation. They become confined to pockets, islands or habitat which restricts breeding and gene flow. Intensity of use of bike trails is much greater than for hiking trails, driving wildlife away and depriving it of quiet refuge areas for breeding, particularly for larger species such as deer/ No studies on Black Bear impacts.
2996	Thank you for anything you do to continue to make these trails available to everyone. Time getting fresh air and exercise in the woods is so important to everyone's well being. The number of people living in the lower mainland keeps increasing, so we need to preserve these publicly accessible spaces :)
3006	Please consult & work more closely with builders as well as trail associations when considering policies & changes that could impact existing & new mountain biking trails.
3046	Mount Seymour trails (like Fromme, Cypress, Eagle, and Burke) are extremely important to the mountain biking community. The trails on Seymour (as well as others mentioned) are

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	much more difficult to newly develop and are much more site specific. While hiking and other activities are important, they are much less site specific than mountain biking trails, and are much easier to newly create.
3061	Just thank you in advance for helping keep north shore amazing and fun for mountain bikes and others who enjoy the trails.
3066	Thank you for allowing us to use the trails!
3081	The NSMBA is your best way to get volunteers and trail work done. We are well trained by the association leaders, and our community already pushes eachother to give back by volunteering on the trails.
3106	Great to have survey re input
3166	Trails are overcrowded with mountain bikes. Please increase signage around trail etiquette for safety reasons.
3196	We need to coexist with the wildlife and if we keep building in the area, we will be displacing even more wildlife. Please do not expand the trail network
3251	Not so much 'improve' trails but maintain in good condition
3256	The former Blair rifle range is an important piece of history that should be enhanced with signage and self guided walking tours
3316	I appreciate this opportunity to provide feedback. At times my short walk from end of Hyannis is not as peaceful as it used to be. Perhaps MBA could explain to their members that many seniors can't hear them coming from behind nor can we move quickly to get out of their way. The signs yield to walkers is largely ignored.
3321	Using multicolored signs on the trees to determinate the trail you are on (blue, red, green,...) would allow to find a way around faster and understand if you are still on or already off trail. Integration with the surrounding system is very important.
3326	Yes, I think adding a QR code to signs for people to donate to trail building in the area would be a great way to build up some funds.
3351	I think the option of re vitalizing old discarded trails should be considered... Boblsed on Fromme or Forever after are good examples of trails that have been renewed...
3416	No
3421	These trails are the home to our local wildlife - we must respect that before our personal fun. Keeping the forest healthy, will keep it beautiful and wild and precious for generations.
3426	Thank you for doing this. I live close to the trail heads and have accessed these trails for over 20 years. They have provided exercise for mind and body. They have been fabulous training for riding confidently in many other mountain bikes systems in North America. During covid they have provided a great place to visit friends during hikes and keep healthy!
3451	Please leave everything the way it is! Too often messing up a good thing is, ironically, not a good thing.
3471	See previous comment, the pace of trail development at Seymour (and the North Shore in general) is embarrassingly slow compared to basically any other region in B.C. I understand the political and environmental challenges but it needs to happen, otherwise rogue/secret/pirate trail building will continue to increase in scope.
3496	Given how busy it is, more garbages and also washrooms near entrypoints would be beneficial for better stewardship
3506	Parking really needs to be improved. Currently it's very limited
3556	I moved to this area because of these trails, love them, they are my home.
3561	I'm please with the possibility to share my opinion
3566	Improved parking for locals only
3571	More collaboration and continuity with adjacent trails managers. Consider community stewardship opportunities for trail maintenance and habitat restoration. Thank you for the opportunity to have input.
3581	More awareness and signage of the danger hiking and running up or with a loose dog on a downhill trail. There seems to be lack of judgement that a person or dog on a trail with someone at speed coming down might get hurt as there isn't time to stop as there is no lane change!
3586	Signage is a disaster. Set it up like DNV has done on Fromme.
3591	The trails are awesome !!!
3621	If there was access from Blueridge to Parkgate that would dramatically reduce my car usage.
3646	Limit e bikes
3686	No
3691	More trails with access to river
3711	The area is well known locally but could use some wider exposure even though this would exacerbate the over crowding
3716	It would be good to see rangers more visibly- might help with trail etiquette
3721	Stop prioritizing commercial and residential developments over sustainability of our natural

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	areas, and stop promoting tourism and recreation in our backcountry areas while slashing funding and maintenance.
3756	My top priority would be to maintain existing access to the trails which already exist. I am not super concerned about expansion
3786	Bikers daily drive up Mount Seymour Rd. to unload bikes and descend to DNV land where mountain biking and trail building are prohibited. They exit by trespassing on private roads and property in Woodlands/Cascades/Sunshine Falls. They refuse to stop trespassing when asked. Residents are becoming more fearful of them as they are becoming steadily more indignant and threatening. At least one assault has occurred. DNV and BC Parks refuse to enforce
3796	Please work with the other land owners for a consistent management plan and trail connections
3836	Just to say that the trail network as it is currently, is GREAT. Certainly amongst some of the best in the world and it is right on our doorstep. Access is without barriers apart from the skill level needed for different trails. That is part of the attraction too. The number of visitors we get from other parts of the world, in normal times, is well beyond what most would think is the case. Hats off the the NSMBA for the job they do.
3846	All humans and animals need a place to be free to roam without too many restrictions. Let's not spoil a beautiful area.
3856	Keep the rifle range trails too. Keep consulting with Blueridge. We are the primary users.
3881	Directional signage is important, as the area is not represented accurately using GPS. If this is in the CMHC jurisdiction, the path connecting Blueridge (Tompkins Cres.) to Parkgate Mall (Seymour Rd Connector) around the top of the Golf Course, is mostly unusable. Upgrading of this trail would be a huge benefit to the local community.
3901	Seymour is a gem and has a lot of potential to even be much better worldwide!
3916	IMO illegal trails continue to be built because there is a lack of difficult trails to ride.
3926	Make sure the professional dog walkers are licensed.
3951	No
3971	Love the trails. Keep them maintained and make sure that hikers know which of the mountain bike trails they can use. I'm never sure if I, as a hiker, am allowed to be on their trails? How do I find out?
3976	I'm curious about policies for or against ebikes. I'm old school and not a big fan of ebikes. However, I have seen some older folks on ebikes and I guess if it helps get them out, then that's ok.
3981	i did not like or appreciate how metro vancouver has transformed fishermans trail into a gravel road and reduced the river views.
4086	more challenging mountain bike trails
4156	I've literally never seen a horse in North Vancouver
4161	I am very impressed with the advocacy and trail work completed and supported by NSMBA. The organization has achieved a lot over the past 10 years.
4171	I love the trails.
4201	Build more trails !
4211	Thank you for seeking feedback and doing the hard work of moving things forward. Cheers
4216	The north shore needs more double black, and pro line mountain bike descending trails
4226	Thanks for taking the time :)
4236	More jumps
4286	I do love MT Seymour trail network!
4296	Stop destroying every unsanctioned trail you find, they're almost all better than the existing black, and double black trails that were approved by the government
4356	The North Shore used to be the benchmark for mountain biking and the trail network has fallen drastically behind other places over the years. I'm finding myself driving more to places like Squamish where there are way more trails, variety and level of difficulty, than riding the trails in my backyard.
4361	The trail networks need harder trails, and places for the best athletes to improve their skills. The North Shore trails used to be benchmark of Mountain Biking and they have been drastically falling behind.
4371	#nsmba is doing a great work and know how to manage and work on trails for biking. In answering this questions I trust them only to work on the existing network and new trails. I favor keeping difficult or rising it on new and existing trails. Descending only trails for bike should be marked regularly along the way, it is possible to enter trails along them.
4436	The loss of CMHC lands on Seymour would be a significant blow to the community near and

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	far. As a almost daily user of the area I encounter many groups from all over Metro Van enjoying this area. If access starts to diminish the appeal of living in North Vancouver or even Metro Vancouver would diminish in parallel.
4446	I think that this area could set a new standard for allowing new trails to be built on the north shore. We've constantly lost trails citing liability (which is baseless given the BC parks act legalities surrounding man made structures) or environmental impact (by municipalities who turn their head and ignore projects which are significantly more environmentally degrading than ANY mountain biking trail network has ever been).
4451	I love these trails!!!!
4456	More DH mtb trails! Big gaps, cool wood work, drops, chutes and overall challenging trails!
4466	The only reason illegal trails exist is because you're not allowing new legal trails to be built
4571	Thank you for keeping the trails wild and beautiful. A future plan for electric vehicle charging stations/car share spots/parking will be necessary as congestion all over the North Shore is exploding. Also, more information about picking up your dog poop bags and being friendly the environment, as I have been volunteering my time to pick up for other people, would be great.
4591	No
4596	Thank you for allowing users to continue enjoying the land
4611	I love nsmba, but not the nvsd as much. I just wish we could have trails on our mountains that is new. We have old school tech, x country, and mellow flow. We just need jumps, Please.
4616	This area is of extreme importance to the mountain bike community. Thank you for taking our input into consideration. We know how important land management is, and are grateful for being allowed continued usage.
4631	Mount Seymour is known as a World class mountain biking destination. Let's keep it that way and make it even better. Just look at a place like Squamish where government funding for trail building has resulted in some amazing trails in a short period of time.
4696	We need our mtb trailssss
4701	Mt my personal favourite mountain in the Shore for biking , love it !
4776	We need more advanced mountain bike trails
4786	Mtb 4 life bro
4846	I appreciate all that is being done with the trails. Mountain biking is my primary and hiking secondary. I would love to see a community educated on the use of the trails and why the two are sometimes kept separated. Two many times have I ran into hikers standing in a bike trail speed or landing portion.
4856	Add signage to all intersections, including at the bottom of downhill trails, to improve wayfinding and as an educational opportunity for mtb primary trails
4891	Bigger jumps, more jumps, bigger features
4896	Please reconsider "no new trails". Without new trails it will simply result in more unsanctioned trails.
4911	These trails are why I live on the Northshore and pay the house prices that it demands. These trails are very important to my families well being.
4916	Please consider the rich history of mountain biking and the community surrounding it. Not all trails have to be accessible for everyone, flattening difficulty curves and creating a more "inclusive" and "equal" environment for all people can create friction.
4936	I moved out here because of these trails. I'd been dreaming about mountain biking out here for 15 years. Now I get to take my kids out on the trails and they're learning to mountain bike with their classmates. Almost seems like most of my neighbors moved here because of the bike trails.
5026	The mountain bike trails on the north shore are the reason I moved from Germany! It's amazing how Mountainbiking formed the North Shore! Trails forever Trails for all
5171	Trails for all is very important to me - not just nearby residents (even though I am one)
5196	Many mountain networks have grown and adapted to new trail design of having flow with jumps, berms, and drops. It's common to have a machine built jump trail in a network. Mt. Seymour hasn't changed in years. Looking at Nelson, Squamish, Duncan etc they've built new trails designed for more modern riding. It's important for the network to adapt.
5211	Make the trails a bit more accessible. For example to get to boogie nights I need to ride all the way up to the top of boogie man or pangore.
5226	Any government plan is not going to end well for mountain bikers. Keep your hands off.
5256	MORE TRAILS!!!!
5271	The trails on Seymour are world class and do tend to be a bench mark for other areas making their own trails.
5326	Please make a process that allows new trails to be constructed.
5331	North Vancouver is known around the world for its mountain bike trail system. It needs to be maintained and designed in a professional way for the future.
5411	wash stations like the ones at fromme would be awesome.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

5416	More access not less for hikers. Right now the most interesting trails are bike trails and the hiking trails are too easy. Continue to allow off leash dog walking.
5451	The trail map at the kiosk (Bridle/Baden Powell intersection) could do with an update. I often help hikers and cyclists who are trying to make sense of the map.
5531	North Van is increasingly becoming less dog friendly. I would like to ensure adequate, safe spaces (that aren't tiny enough enclosed pens that they call dog parks) for people to take dogs and let them sniff and explore offleash.
5536	Have been riding the trails for 20+ years, during which there has been a steady improvement in the quality and number of [mostly mtbiking] trails along with an increase in their usage, and a welcomed increase in the number of female mtbikers, hikers, and runners, and the cooperation between the District, CMHC, and NSMBA.
5621	Thank you for preparing this survey and allowing the public to provide input into this process. The trails have become an integral part of our community and proper planning with consultation will allow us to create change in a positive manner which will ultimately benefit all stakeholders.
5736	Please, whatever you do don't make the trails worse!
5766	Love the trail network!
5781	Kids need better trails and a trail centre in Blue ridge.
5866	This is a world renowned destination for mountain bikers but it is being eclipsed by other municipalities who are doing a better job developing bike networks that are more inclusive of different levels of riders (more trail variety) as well as other user groups. Look to Bellingham, Bentonville, Ashland, etc for examples of community involvement (citizen, government, business) that have led to direct economic and cultural growth/attraction.
5881	Even though I live in the surrounding neighbourhood and typically ride to the trailhead, I think a lot of improvements need to be done for parking at the Old Buck and especially the Hyannis/Berkley entrances. Maybe that old Seymour mountain overflow parking lot on the corner of Mount Seymour Road and Indian River Drive needs to be opened up as a viable overflow for Old Buck. Remove some of the strain from the Ann Macdonald way/Parkgate mall
5886	Mtb is my own sport, North Van is internationally known for it, but there are few accessible easier trails for those who are new to the sport. Longer green-level descent trails might serve tourists and beginners very well. Especially if they end in local commercial areas where local businesses can benefit.
5896	Ebikes are becoming a problem because it is allowing people who otherwise might not get to certain trails to ride things they don't have the skills for. It seems more these days that you have to stop to pass people who are well outside of their comfort zone and typically they are on ebike. Also poor etiquette from ebikes when passing human powered bikes on the climbs
5906	Please consider expanding the trail network for mtn biking as it is a high growth sport.
5911	I love this trail system! Would love to see some improvements - glad there's an opportunity for input. Thanks!
5921	Thanks for doing the work and engaging us in the decisions. I know when the whole CMHC signage/closure stuff happened a few years ago it really brought to the forefront just how important this area is to the broad community. During the various stages of Covid people having a place to get outside and unwind was literally lifesaving
5951	Thank you for asking!
6031	Just a reminder that the trails to me are very valuable and are a significant reason for wanting to live on the north shore.
6041	NSMBA is an incredible organization that's does amazing work in bringing together multiple stakeholders and making trails accessible for all. Continued and increased funding for this organization is necessary.
6046	Good access to a Seymour is essential for the health of our community for bikers, hikers and trail runners.
6076	More progression on exisiting trails. Boogie nights has improved so much under Kona's stewardship and allowed riders to progress but there is nothing past this
6186	In general I think the area is well managed, maintained and if nothing changes I would still be very happy. If it isn't broken....don't fix it!
6191	I think the trail networks are great as they are and would like to see very little change to it. I would be disappointed if this area was cluttered with too many signs and gravel highways that are deemed "trails" which in my mind would really detract from the beautiful nature in this area. I don't want to go to an amusement park, I want to hike and bike and run on gorgeous nature trails that are well built but still feels like nature.
6201	Thank you for everything already in place!
6231	Keep up the great work!
6321	happy to see you are doing this. I would suggest a parking lot at the Hyannis entrance to get cars off the streets

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

6326	Don't ever charge people to ride, thanks
6381	The trail system is not robust enough to handle the volume of mountain bikers in the area. The system needs to be drastically improved to get the 'pros' off of the current system by establishing more black and double black trails... We also need more progression trails with gap jumps and drops to allow users to build up their skill set. Right now the systems have a very steep learning curve.
6401	This area is my favourite place to mountain bike! All of my interactions with other trail users have been pleasant and respectful
6441	As I said in the last page, the need for more difficult trails is very high. It's no secret that there are a large number of illegally built trails on Seymour. This is obviously due to the current network seriously lacking what the masses want and desire. Please start to listen to us
6446	Thanks for the opportunity to provide input. Also keep those mansions off the mountains!
6501	Create a progressive jump line for riders to learn to jump safely.
6511	This is such an important trail network and it is a reason why I live on the north shore
6541	WE would love to have some new trails bit. It is tiring to ride the same stuff all the time and is the incentive for us to drive to the fraser valley or squamish - when we live close to the north shore, we should encourage more local riding and causing less traffic and pollution on the roads.
6596	Please no hiking only or mtb only trails
6601	As someone that's been biking for the past 4 years, and learning more about the history of mountain biking on the shore - it's worrying to see how we're stagnating in typical Vancouver-red-tape fashion instead of embracing the opportunities we have both for community wellbeing and economic gain.
6671	Please develop some more flow trails for mtb - this is what is sorely missing on the shore.
6716	Thank you for your hard work!!!
6726	Climbing trail for MTB to mushroom parking lot (bypass of upper Corkscrew downhill trail)
6736	No
6776	A and B routes for features with a ride around options are both running fun and biking fun
6816	Thank you for your hard work on this project
6866	Build a climbing trail from the top of mushroom to the road so I don't have to walk up incline.
6926	I am worried that CMHC will "upgrade" mountain bike trails which usually in my experience means taking out hard or challenging features.
6941	Thank you for including the users with this survey. Please work with NSMBA more. We have a large membership and our fees, fundraising, volunteering all go back to the trails. The NSMBA is a great advocate for our beautiful north shore. I am a rider, volunteer trail adopter (maintenance) and trail runner with my dog.
6976	The Seymour trails are legendary. Known across the world for their incredible features and accessibility. The trails builders (mountain bikers) put an incredible amount of time, energy and resources into building and maintaining these world class trails. A huge thanks to them.
6996	Working with First Nations should be the priority for how the CMHC lands are managed. This would even be a great opportunity for a land transfer - returning the CMHC lands to the Tsleil-Waututh Nation
7006	Thank you for listening to user groups.
7031	Faster. Process is to slow
7086	This area is a critical part of North Vancouver lifestyle. Maintaining and improving public access to this area should be a key priority.
7101	Seymour mountain bike trails are top-notch and world-class. Love it!
7141	i love everything about Seymour- I mt bike, road bike, trail run, hike, dog walk and just appreciate everything about Seymour. I hope it always stays open for all of us to use
7146	The signage is notoriously bad in this area. It's easy to get lost.
7151	Seymour is a world class destination for downhill mountain biking and an integral part of the north shore movement that changed mountain biking around the world.
7171	This space is a treasure so close to a metropolitan city.
7181	Orienteering events are infrequent and don't attract huge numbers (its a pretty niche sport). This area is one of the best areas in the lower mainland for orienteering so it's critical for the sport to maintain access to this area.
7191	Keep hikers off fast primary bike downhill trails, signage at the bottom of trail saying Danger, Primary Downhill Trail.
7196	There is a lot of dog poop on the trails. I have 2 dogs and would like to continue using these trails with them. More signage on the trails about picking up poop and maybe more garbage bins at each trail entrance?
7226	Education about trail etiquette is very important.
7241	The trail network at Fromme is an excellent template for what should happen on Seymour.
7286	Thanks for this opportunity to provide input.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

7361	I love Mt Seymour and the trails. Thank you for consulting.
7421	These trails are invaluable to me and my family and enrich our connections to the natural world while also bringing down stress after a busy day. I would prefer minimal to no changes as there are plenty of trails for us humans and we don't need to encroach further on these natural systems. If we need to manage visitor volumes in order to prevent expansion of trails then please consider adding parking meters along Hyannis and Berkeley.
7431	Should really just take how the trails are currently used and make it "officially" sanctioned. No need to "improve" aka disrupt more nature
7441	Parking can get difficult around entrance B. More street parking here would help.
7451	It's a great area - don't think a lot needs to change! Thanks
7466	Thanks for asking
7491	Keep trail access free
7511	Provide more space (eg laterally, rather than straight down the fall-line) for flowly runs to be designed. Right now, there are too many Black runs (Diamond and Double Diamond), and the 'Blue' runs are basically hiking trails. If you seek more usage, build across and build long -- long runs that descend at a slower pace, with more banks/berms, rather than the hardcore mangle of rocks & drops that they currently are.
7516	Would be nice to be able to learn about history of the trails: when was built? who name it? what is the meaning of the trail name? There are certain exceptions, like C-Buster, Severed-D - i don't care much about, but want to know about Run Lola Run (Who is Lola Hillard?) for example. There was a nice article about LGMH history. A link on DNV site to this kind of information maybe possible?
7586	I am an avid Mtn Bike user of these trails. I applaud the work and partnership with NSMBA. I think a little more signage might be useful in confusing areas (Bottom of CBuster, RTC connector, etc as I find that area very confusing). Also, perhaps some more beginner trails for those riders who think they are Blue worthy, but really aren't. I find them dangerous to themselves (and others) when they get in over their head on a trail.
7596	I moved away to the Okanagan, but try to prioritize visiting Seymour whenever I visit. I'm more of a mountain biker, but am doing Kneeknacker race next year.
7606	Given that the mandate of CMHC is foster affordable housing, I question question why CMHC owns this land. It does not appear that this parcel continues to fit into this mandate. I would like the CMHC to justify its continual management of the land or potentially transferring/selling it to an organization better suited to be a long-term steward (for example, Metro Van Parks & Rec, BC Parks and/or Parks Canada).
7646	Electric bikes are allowing mountain bikers to now move as fast uphill as downhill. Climbing trails and multiuse trails are now almost the equivalent of downhill trails. If mountain bikers resent hikers and runners on the trails - designate the trails 50/50 - half for mountain bikers and half for people on foot (dog walkers, hikers runners)
7676	no
7696	great job!
7701	These trails are at the end of my street. Its like a home to me. I like the condition they are in and for the most part, they are mostly used by locals. If these trails become more popular and adverstised, issues will arise. Similar issues to end of Hyannis and Berkley with parking, noise, lack of care for the environment and the community and ignorance by people who just want somewhere easily accessible. I ask that you consider all the issues.
7736	Keep the wet land areas by putting bridges over them rather than drains. In the past, a frog area was drained and there are no more frogs in th.at area now
7741	These trails are a big part of what makes north Vancouver a world class city.
7786	I bought my house in close proximity to these trails because being close to these trails was very important to me and my family, for the primary purpose of biking, but also for hiking, and great, healthy family activities. The trails here are amazing, and I hope that this trail plan ensures we do not lose these gems so we can keep this neighborhood special.
7801	said it all back there. the shore was and still is to an extent famous for its riding people come from all over to ride here and the fact that west and north Vancouver municipality's want to replace it so there can be more 50 million dollar mcmansions is appalling. but u don't have to listen to me im one person and your looking at millions of dollars but all im saying is that yu have a choice to make.
7811	These trails are a significant part of my families, friends and my own life. These are the trails we use the most on the North Shore and from my experience, these trails have the best atmosphere and community compared to other trail networks on the North Shore. These trails cater to a diverse range of activities, ages and skill levels where I see lots of families, young children and older folks. It is one of the friendlier and inclusive networks.
7851	North Vancouver was once a haven for mountain biking and a world-class destination. This is no longer the case because of the poor trail maintenance and steadily increasing difficulty of the trails due to erosion. The sport has progressed, yet the trails have not. There are no new

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	trails here (unlike other riding areas in BC), which means there is no draw. People are not visiting, moving away, and selling their bikes.
7856	Need to maintain historical MTB trails and create some harder trails. Hikers/bikers seem to have a good relationship - use by dogs is becoming dangerous - an animal and MTBer WILL be hurt at some point of dog owners don't respect rules and other users.
7906	I love this network... I also love that it is harder to navigate which makes it a bit of a quiet loner brother to Fromme. It doesn't draw the ride parties and big groups as much and I personally really like that. But some signage upgrades would be nice, and something for kids to ride.
7921	Bring online some of the "dark" unsanctioned trails to increase variety and options. This will also help spread the usage around.
7966	Thank you for managing the best mountain biking in the world. I meet mtn bikers from all over that visit here to ride these trails. I moved here in 1994 to ride bikes and to paddle the Cap, Lynn and Seymour rivers. (I am a paying member of the NSMBA)
7976	Please ensure that the trail builders on existing trails are kept in the conversation as plans evolve.
8001	We love these trails, please don't let anything happen to them!
8056	We are so lucky to have the trails, NSMBA advocacy . Educate around about how important our proximity to nature is to our quality of life.
8121	keep up the good work
8166	keep up the great work!
8191	Let the mountain bikers build challenging trails like the Tri cities, Squamish, chilliwack or whistler. We are a world renowned Mtb destination with sub par legal trails.
8216	No
8226	An important part of the experience is being able to walk on single-track unimproved trails.
8291	Have lived locally for 30 years and have noticed significant crowding on some trails
8336	MTB ascent trails are great for multi directional use by hikers and trail runners
8341	If Asian is not an official trail it would be nice if it could be.
8376	The climbing trail from Hyannis is the urgent problem and needs to be immediately addressed. All skill levels and ages constantly use this climbing trail which has a number of challenges for even experienced riders in their prime. Enjoyment and accessibility for all levels & ages must be prioritized to reduce injury, frustration, and improve safety. The root-rock area beside High School needs to be regraded, and the steep rocks before the bridge
8391	Love that one of the neighbors near Hyannis put in a bike wash station (donation based) for a bit and don't love when commu ity members tell vehicles with mountain bikes that they can't park on the public street.
8406	Thanks you for giving the community a voice
8411	Thank you - keep trails open please
8461	If I lived closer, I would use the trails weekly. The CMHC trails are part of a larger network. Any changes need to account for the larger context of the area. Mountain biking is a growth sport locals and also brings in tourism dollars to the local economy.
8496	Limit commercial dog walking
8531	I'm excited to see where this initiative goes and to finally have some collaborations for improving trails and access. Good job.
8536	Adjacent neighbourhood access and use constraints of the park should not be tolerated. If you buy a house by a trailhead don't be surprised by people using the trails!
8541	Mountain biking in this area is crucial to my emotional health and my community. Mountain biking on Seymour and Fromme are why I live here.
8546	There have always been trails on the north shore for horse riding. This is important. But the mountain bike community is unaware of this history and often very very rude on the trails
8571	Hikers on seymour tend to be far more surly to mountain bikers then their counterparts on fromme or cypress
8586	I strongly think that masking often young, healthy outdoor users should be a top priority:)
8591	There are a few great trails (like Cambodia for instance bit also others) that could be worked on to "create" more awesome downhill mountain biking trails. It would be great if these could be used as a way to expand the network.
	The trail network is amazing and such a fantastic component of living in North Vancouver. Thank you for this!
8596	Permanent Orienteering Courses: to promote an active life style for all sporting levels and ages, GVOC is engaging in the development of permanent orienteering courses. In the CMHC area, this could be implemented using markers (control points) on already or future signage posts. Maps would then be downloaded on the club's or jurisdiction's website. For these courses the trail network could be used as pathways to the controls.
8601	As a member of the Greater Vancouver Orienteering Club, in addition to hiking and running in

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	the Mt Seymour area I also take part in orienteering events that take place there 1-2 times a year. Permits are always obtained to organize these events. The navigational challenge is much greater if participants can run off-trail. There are few other places in the region that are suitable for these events.
8606	Better signage at bottom of trails indicating downhill bike trails. Unknowingly, families with small children hike up these trails creating dangerous situation
8611	We are lucky to have such a extensive and diverse network of trials so close to our back yards. Let's ensure continued access and stewardship.
8631	By and large, I think the trails are managed well. In my opinion it is entitled residents of the area that are the problem
8671	No
8726	We need to learn more from other communities on how they maintain mountain bike trail networks. Travelling throughout BC (such as Nelson, Revelstoke, Fernie, Golden) they have much more extensive and better maintained trails for mountain biking, which is a fantastic, healthy economic driver for a community.
8771	Love the access to these great outdoor spaces
8786	I would just really love for there to be more big jumps and drops on the shore because this is where many amazing slope stylists and free riders progressed and became champions because of it, and now there are no options at all for anything like that, and building something of your own is illegal.
8791	Thanks for supporting the trails
8801	Fox cbc! This will take a huge burden off of mt fromme.
8806	No
8836	improving/increasing parking spaces and access to trailheads would spread usage and allow greater dispersion of users, then trails won't be won't be so crowded
8856	These trails are beautiful and such an important part of our daily family life and bring us so much joy and happiness. I feel so lucky having the opportunity to access these beautiful trails for multiple family activities.
8861	I love this place. I'd hate to see it change. Thank you for giving us the opportunity to share our thoughts!
8881	Commercial dog walking operations should be limited to specific areas, and more limited in area than the are currently.
8886	I love these trails and is one of the many reasons I chose to live here. I want to enjoy them, and my children want to enjoy them, for many many years to come. It is important that we encourage people to stay on the designated trails and protect the ecosystem around us so we can all enjoy our time in the woods. Also, in addition, there are several sites where improved bridges would be great as the area gets very wet and slippery in the winter.
8946	I live in Blueridge and have been trail running in the trails for decades and as I'm getting older continue to trail run but also now hiking. For the most part, people are really friendly and share the trails really well. There are however people who do not - who will walk 2 abreast and expect others to move over off the trails (The trails in this CMHC area, for the most part, quite narrow unlike some other trails outside of this specific area)
8966	Since the pandemic the area has seen a huge increase in usage. This once quiet area has now become a hub for the hiking/biking community. It is important to remember the residence when making decisions that are going to affect their quality of life.
9006	Please keep the emphasis on KISS and pragmatic.
9016	too many cars parked on Hyannis at the top of Berkley. Dogs run around. People changing on the street. Too much traffic. Let them park at the school or at Blue Ridge Park.
9026	Would like a trail that would take us to Park Gate without having to go to any main roads
9061	The dog poop, needs dealing with - perhaps composting dog waste drops along trails so people doing leave poop bags along the trails. Or more No Dog trails, so there's an option to walk on a trail and not need to worry as much about dog poop along the edges of the trails. With Covid, people tend to move to the edge of trails when passing others, to keep distance, but most of the dog poop is on those edges too, it becomes pretty gross to navigate
9076	I can't seem to get the immediately previous section of the survey to work online. My priority is hiking largely because I am a hiker. However, I also see that when there are too many bike trails, they seriously cut up the forest and the bikes do degrade trails. So this is an environmental concern as well as a hiking experience concern. Bridle trail is largely a hiker trail and not a biker trail or so it seems. Some separation benefits both
9086	While signage may be a bit lacking, I understand the argument that users should find their own way through public parks (e.g. Hampstead Heath with next to no signage).
9101	There is no problem here for the government to come in and fix! But you will establish a board and pay a bunch of consultants to come up a program which is not needed.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

9106	What are the plans for more parking?
9131	Thank you for all that you do to provide access to our beautiful wilderness.
9146	These trails need to stay as nature and public and not become housing (or other) development
9151	I am a hiker, retired and use the trails generally on week days and non peak times. I find the cyclists I encounter and extremely polite and they move safely past the hikers, usually with a friendly greeting This is contrary to the common way of thinking. If anything the dog walkers with their occasionally uncontrolled dogs are more of a pain in the neck.
9171	These trails are wonderful, but they need maintenance to protect users and the environment Generally, I find people and bikers are good on the trails. As always there is a small minority that spoil it from time to time.
9201	Parking rules in upper Blueridge should be reasonable - i.e. allow public parking for trail users. If necessary there could also be some resident-only parking areas in very high parking density locations.
9221	The North Shore Mountains are world famous for hiking, biking, and nature watching - those trails already in existence (sanctioned and unsanctioned) should be developed and continually maintained and pristine/very underdeveloped areas should be environmentally restored. This will help reduce significant erosion and trail braiding, and will preclude Grouse Mountain-like debris flow events that destroy the trails for all.
9281	Make trails on the "dark side" sanctioned so that they trail users (and parking) will be more spread out on the mountain, and trails will be properly maintained (and hopefully expanded).
9286	Getting people into nature and having fun should be a key theme. Trail maintenance should be supported for everyone's benefit.
9311	Leave things mostly as they are. Don't promote overuse where the trails become too busy. Make it clear that people must pick up after themselves just like they pick up after their dogs. There's a significant problem with human excrement throughout the area. And people seem oblivious to the need. But the need is severe because of no public restrooms in the area. More people using the trails means more people going to the bathroom on trails.
9316	Mt Seymour encompasses some of the most sought after mountain biking in the world. Please continue to protect it while allowing it to flourish and grow (allow more trail building!). The local trails provide beauty, health benefits, challenges and primo exercise to thousands - expand the network; do not limit it any further!
9331	Add more trails
9361	This area of Seymour Mountain is nothing less than a gem worth protecting, yet sharing. Visitors near and far express how it transports them to 'another world' when they enter. This is rare piece of heaven in a geopolitically unique spot of the world that deserves great stewardship and upkeep. For the most part, people have treated the trails and those who use them with reverence and respect.
9366	Parking near the trail heads can be a problem during busy weekends and during the summer. need parking signage so driveways aren't blocked. Trails are open to everyone but users should respect the local neighbourhood residents.
9381	Education of dog owners about their responsibilities is hugely important. Likewise mountain bikers should understand that it is not THEIR trails, but for all to share. A few of them (particularly younger ones) do not seem to fully appreciate this fact.
9391	Location identifiers for emergency response would be helpful. And coordinating these in consultation with North Shore Rescue and EMS.
9441	Nothing comes to mind.
9461	There are many ponds and creeks that are clogged with deadfall. I think it would be good if the district could arrange for community volunteer groups to clean up the debris.
9471	I think a similar volunteer program could be arranged to clean up forest debris close roads that skirt the forest to help with forest fire prevention. There have been some excellent bridge/boardwalk renos that have taken place in the past year. Kudos! The one area that I believe needs a new bridge to cross the 3rd creek near the end of the popular Tompkins-to-golf-course trail. After heavy rains the trail is almost impassable and I often see people having to backtrack, especially young families. In the summer, that creek is dry, but come Fall, it runs heavy.
9506	Allow for off trail access
9526	More trails, maintenance of trails should be done with looking at the environmental impact
9566	Thank you for your time on this and in engaging with our community!!
9586	no
9591	I filled this out for myself, but my 11 year old children would echo my priorities. They love

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	progressing through the technical difficulty levels on Symour, their request would probably be for an easier way to ride to the top of Corkscrew.
9631	I also through GVOC use this area for orienteering which also means going off trail - I'd like to continue to be able to do that!
9636	I most often visit the CMHC to go orienteering. Continued off trail access for orienteering is my highest priority for the CMHC.
9661	I love these trails and use them at least 3 times a week for trail running and orienteering, as well as some gravel biking and xc mountain biking. These trails (and off use access) are a very large contributor to my mental and physical health. I love these trails!
9666	It should be mandatory that all dogs should be on leash. I would like to see commercial dog walkers banned from all the trails.
9671	Preserving the forest as demand for housing increases scares me into thinking it will be removed piece at a time. How can we guarantee the future generation will have trees to look at and enjoy?
9676	This may not fall into the scope of this assessment, however there should be consideration given to renaming Indian River Road to something more appropriate.
9696	Please allow continued access for off trail use for vancouver orienteering events. There are only a few per year and the forest here is wonderful.
9736	We love the Seymour trails. North Vancouver can and should be a mountain biking destination like Squamish or Cumberland, but we have to work on improving and creating mountain bike trails. We have such a large population that is going to continue to grow. We need trails to support the increase in mountain biking interest with covid and the increase in population.
9791	Seymour is my favourite mountain to recreate on and a special place to go relax in the woods. Whatever it takes to continue a good relationship there with the landowners should be done
9806	Thanks for keeping this area available for getting out into our gorgeous forest. Much appreciated!
9816	For signage, please look to CRD Parks in Greater Victoria as a stellar example of signage. Not just in MTB areas but all over their parks, even in more remote areas. Every trail junction is clearly marked with directional information and maps are frequently provided.
9826	This is outstanding and many in the community support the work done by the nsmda. Glad to see the city and other organizations embracing trail building and stewardship.
9831	Outhouses at entry and exits would be a nice addition.
9836	Any future plans should take into consideration the people who live in the area surrounding the trails e.g parking, traffic etc.
9846	Engagement survey was not mobile friendly at all and especially difficult to complete ranked answers.
9861	Seymour is the primary trail network I use. I really enjoy using this trail network and I am very happy to have a voice in the RAMP. I look forward to being able to use these trails for years to come!
9866	These are incredibly valuable recreational lands. The users of the trail are generally respectful. Tour groups should be discouraged as masses of people is contrary to both the single track nature of the trails and the solitude that can be achieved on these trails.
9876	This is a vital recreational area for North Vancouver residents. We do not want it to be overrun but where there is a concentration, we need to make sure it is managed - that means building parking rather than messing with the neighbourhood.
9881	Dog shit in bags everywhere. lame ass lazy dog owners.
9906	Please rename Indian River road.
9941	I think the area is great as is!
9956	Maybe more challenging mountain bike terrain.
9966	These trails are incredible and we should do all we can to improve them and add more. They're world class and mountain biking is a rapidly growing sport so it's very important to invest in the trail network so it doesn't get left behind. All around BC trail networks are expanding constantly. The shore is one of the few places where new trails are extremely rare and it's such a shame as this is one of the origin places for mountain biking.
9996	There is an active and wonderful orienteering club in Vancouver which includes members of all ages (children up to adults in their 80s). It is a "sport for life" and helps keep people out in nature and active through the lifespan. Access to forested areas in Metro Vancouver is crucial for this sport.
10021	If you don't make existing trails fun and challenging people will continue to develop illegal trails. This is important to consider when choosing what features to include or disclude in a trail including man made features.
10036	No thanks,
10056	A portapotty some where in the area - maybe at the park (sometimes there's one there) would be amazing.

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

10136	A few more signs reminding people how to react to bears would be great
10146	I moved to the shore because of these trails.
10161	I am very glad to see this consultative approach to management of the Seymour forest landscape. There is room for everyone in this remarkable terrain if we understand the needs of all users, as well as the science-validated needs of the environment in which we all want to recreate. As orienteers, we are particularly closely connected to, and appreciate, the landforms and vegetation cover of the terrain we are traversing.
10176	The North Shore Trails are a wonderful asset, I'm so glad that you trying to make them work for everyone. thank you
10191	As an older rider, I no longer feel safe taking my well trained horse out onto the trail, even the small local ones. Yet as a kid when I didn't own a horse I worked with other riders to maintain and keep trails open for hikers and riders. Now it seems that everywhere you go this is forgotten. I do not mind mountain bikers generally but they and the general public do need to be aware that horses react to things and be part of a solution
10201	I think there should be signage on the downhill mountain biking trails warning pedestrians and dog walkers that there are fast moving bikes in the area and not to stop on the trails.
10246	We already have 3 loops for runners and hikers in North Vancouver (Grind, Quarry and Lynn Loop). I'd love to see 7 more so we can have 10 amazing loops. Walkers and hikers would love this. There are amazing trail builders who are experienced and educated that can build bike trails like New Normal. I'd love to see collaboration with these trail builders and support them more, allow them to use their expertise and experience to add more trails
10251	Provide signage on invasive species management. Trail users will likely embrace invasives removal if there are adequate signage and collection containers. Signage about leave no trace education should be present at all access points and main intersections. Information regarding proper interaction with wildlife should be prominently displayed. Please let the forest stay wild. Thank you!
10271	More and more people are using the trails. These need to be maintained and expanded so people can continue to be courteous and enjoy them.
10356	Please continue to allow off-trail access for orienteering!
10396	Manage parking while not implementing fees, create more trail access points .
10406	Daily/Weekly is too coarse to choose from. I would typically be on the trails 3 or 4 times a week probably. We used to use the trails for dog walking weekly, and will again when we get a new dog.
	The signage issue I have is when maintenance is being done ... it's impossible to put things up on all trail access points, but I have been forced to backtrack more than I should have because of missing signage.
10426	The many trails are built of outdated mountain biking trail design. Need more Trails like forever after or Adonis that use natural terrain without adding useless wood features or turning it into a feature-less sidewalk. Go to Squamish or Whistler and see how they are building nice tech trails.
10466	lack of parking around old buck - I feel bad for the neighborhood nearby that is always flooded with cars, but the city provides no where else to park, so we are forced to park in the neighborhood if we want to ride
10511	Mtb is my favourite usage of trails. Need easier climbing access - Good Sir is great but too hard for anyone
10531	I've lived in Blueridge for almost 30 years and the number of mountain biking trails has grown substantially and yet there is just one hiking trail. I'd like to see fewer trails overall and more hiking only/priority trails. Thank you for the opportunity for us hikers to have a voice.
10536	Collaboration with DNV and BC Parks to ensure trail network is retained on Seymour.
10641	Please don't allow any more bike trails. I do enjoy sharing the trails with bikers as I find them very friendly and respectful.
10681	N/A
10686	Why in the second last question was there an option for "hiking only" trails yet only "biking primarily"?
10721	All of us need accessible, high quality outdoor recreation- especially during Covid
10746	No
10766	Bike trails bike trails
10846	I love Seymour and it has a special place in my heart
10871	The trail system is great as is. People from all usage groups are by and large respectful. Even though 90% of the trails were built by and are maintained by volunteer mountain bikers, the ethos is that all users are welcome.
10921	It is weird that gravel biking was included in here as the CMHC trails are not really at all

Quick statistics

Survey 236342 'CMHC Mt. Seymour Recreation Access Management Plan: Online Survey'

	appropriate for a gravel bike at present.
10926	Thanks for giving the public a chance to provide feedback. These trails are a huge part of our lives :)
10986	Thank you for the wonderful trails we have! We are so lucky!
10991	It is ironic that in this general area dog owners are advised to put their dogs on a leash when they LEAVE?
11051	Don't overdevelop; keep it simple; there are currently literally zero issues with the trails as they are now
11111	This trail network is very important to my regular exercise routine, social engagement (riding with friends) and overall mental health
11121	The think the trail network is excellent. Keep in mind that mountain biking brings tourists from all over the world.
11126	Good Sir Martin is amazing and the only other climbing option for MTB is Old Buck. When this trail opened up a couple of years ago it transformed the CMHC area of Mt Seymour for the better.
11131	There is a lot of great nature (mosses, crazy trees, crazy rocks), wildlife (even the slugs are beautiful some mornings), pocket views, etc. in this trail network, and I'm glad there is going to be some mental work put into being a good steward of this land, and that public access will be maintained.
11136	Support for more trail maintenance would be great. Classes for kids to learn more and then be able to contribute to trail maintenance.
11161	Consider the potential impact of e-bikes on multi use trails given the speed at which they can travel.

Summary for S5Q20

Are you a member of any local stakeholder organizations?

APPENDIX B

Bulletin No. 2017-03-29

PURPOSE

The following information and guidelines will assist you with meeting the requirements of the new *Water Sustainability Act* (WSA), when working around water

<https://engage.gov.bc.ca/watersustainabilityact/>

Any construction, rehabilitation or maintenance on trails requires approval from the local District Recreation Officer.

Small-scale clearing of brush, removal of minor wind throw, or installing route markers (e.g. ribbons or cairns) does not require approval.

For additional information or to contact the local Recreation Officer go to:

<http://www.sitesandtrailsbc.ca/default.aspx>.

BACKGROUND

RSTBC manages about 1750 recreation sites and 530 trails in British Columbia, and authorizes the construction of recreation sites and trails and infrastructure, in or near streams and lakes. Examples include trail stream crossings, docks and boat launches.

While some trail construction activities are completed under contract to RSTBC; the majority is completed by volunteers and partnership agreement holders. In addition, a significant number of unauthorized stream crossings and in-stream works are completed without the knowledge or oversight of RSTBC staff.

Stream crossings and in-stream works may have negative impacts on water resources, and in many instances, is not meeting the requirements under WSA.

DETAILS

When working around water, follow these basic rules:

- Plan your work in advance to account for the 45-day notification process or 120-day approval under the WSA, if required.
- Minimize the footprint of the project and associated foreshore disturbance.
- Finish the work as quickly as possible once started.
- The permanent removal of stable, naturally occurring material from a stream or stream channel is not permitted unless authorized by RSTBC staff. This includes rocks, gravel, sand and woody material.
- Repairs and refueling of equipment should be done a minimum of 30 meters from the stream.
- Equipment must never be cleaned in watercourses, including shovels and other hand tools.
- Minimize erosion by working in dry conditions; ensure erosion and sediment control measures are available on-site and utilized as necessary.
- Any disturbed areas (e.g., riparian areas) must be restored to their pre-disturbance condition and function.
- Restoration must be completed in a manner that minimizes the colonization and spread of noxious weeds.
- Immediately report any spills of sediments, debris, concrete fines, wash or contact water of reportable quantities to: 1-800-663-3456. For additional info on reporting spills go to: <http://www2.gov.bc.ca/gov/content/environment/air-land-water/spills-environmental-emergencies/report-a-spill>

Contact the local Recreation Officer before conducting any work; Habitat Biologist notification may be required.

Best Management Practices:

1. Brushing of riparian vegetation.

*District Recreation Officer approval not required.
Habitat Biologist notification not required, provided brushing is outside of the channel and floodplain.*

- Remove only the material needed for the purpose of new construction or maintenance.
- Leave streamside roots embedded in the bank if possible.
- Limit stream bank soil disturbance to prevent sediment from entering the stream.
- Do not deposit any of the brush in the stream channel.
- Re-fuel any mechanical tools (e.g. brush saw) well away from the stream channel.

2. Installation of a clear span bridge across a stream.

*District Recreation Officer approval required.
Habitat Biologist notification required if the conditions in WSA Regulation 39 (1b) cannot be met.*

- Ensure the bridge is designed to span the full bank width of the watercourse and constructed to address river processes at flows above the high mark.
- Obtain the services of an Environmental Monitor to oversee the work and conduct fish salvage if a diversion of flow is required.
- Install effective erosion and sediment control measure to prevent entry of sediment into the water course during work; inspect and repair if necessary.
- Conduct installation work by hand where possible.
- Operate any machinery from the top of the bank, keep machinery clean, and inspect for leaks. Re-fuel machinery well away from the channel.
- Use pre-cast concrete when concrete is required rather than casting in place.
- Ensure activities and structures (including backfilling of footings/abutments and placement of rip-rap) do not encroach on the full bank width.
- Restore banks where any disturbance has occurred. Grass seed or willow stake exposed soils to encourage new growth and prevent erosion.

3. Maintenance of handrails and decking on a stream crossing.

*District Recreation Officer approval not required.
Habitat Biologist notification is required.*

- Conduct maintenance work by hand where possible.
- Prevent material from entering the channel and remove any introduced debris by hand.
- Ensure paint flakes, abrasive grits, and other residue does not enter the watercourse during repair as these may contain toxic lead compounds.
- Avoid the use of treated wood and any toxic paints, primers, solvents, degreasers and rust inhibitors.
- Minimize spill potential by storing, mixing and transferring non-toxic paints and solvents on land.
- Sweep decks to remove as much material as possible before washing.
- Direct wash water past the ends of the bridge deck to a vegetated area to prevent it from entering the watercourse.

4. Placing embedded stepping stones in the stream.

*District Recreation Officer approval not required.
Habitat Biologist notification is required.*

- Conduct work during low flows and within the timing window of least risk for the fish species in the stream.
- Only excavate where necessary to limit sediment suspension and transfer.
- Implement sediment control measures where the substrate is composed of fine materials that may be mobilized as a result of excavation.
- Place stones by hand if possible. If equipment is needed, operate from the top of the bank.
- Use clean, natural stones rather than concrete or other manufactured materials.

5. Removal of embedded stepping stones.

*District Recreation Officer approval not required.
Habitat Biologist notification is required*

- Implement sediment control measures where the substrate is composed of fine materials that may be mobilized as a result of excavation.
- Remove stones by hand if possible. If equipment is needed, operate from the top of the bank.
- Fill-in exposed cavities after removing stepping stones using surrounding natural materials to restore the channel bed.
