

*****NOTICE OF IMPLEMENTATION*****

**RESOURCE ROAD RADIO CHANNEL IMPLEMENTATION IN THE
CHILLIWACK NATURAL RESOURCE DISTRICT.**

The Chilliwack Natural Resource District will be implementing the resource road radio channels later this autumn and would like to inform you about the process and steps that will occur over the next 3 months in order to achieve this objective.

The Chilliwack Natural Resource District is now divided into 66 polygons and each polygon has an assigned road radio (RR) channel. Different criteria such as topography, historical operating areas, watersheds and road networks were used for creating the polygons. The interactive map and the resource radio road channels and frequencies are available on the below sections on this website.

From mid-September to the end of October 2015, we will install the RR Road Channel signs and temporary signs indicating the effective date or start of the RR channel usage. These will be affixed to the existing Forest Service Road sign posts.

**The Effective Date for the Resource Road Channel
Implementation in the Chilliwack Natural Resource District is
November 16, 2015.**

After the November 16, 2015 effective date, temporary signs and old radio frequency signs shall be removed to avoid confusion and potential safety issues on the forest service roads.

We take the opportunity to remind you that all road users are responsible for having their radios programmed with the new road radio (RR) channels before the implementation takes place in our District, and we encourage you to pass this information along to other radio users to ensure a smooth transition as possible. Road radio (RR) channels may be programmed at any time as the frequencies and channels are a provincial initiative and will not change.
