RISK ASSESSMENT: FOREST HEALTH, WILDFIRE					
Forest Health Patchy MPB damage. No recent attack noted.					
Wildfire (e.g. risk ranking) Moderate					
Private Property There are no private properties directly adjacent to the treatment area.					
MANAGEMENT OBJECTIVES/IRM VALUES					
Treatment Objective(s) and Future Regime: The treatment objective is to increase the diameter and height growth of dominant and co-dominant Lodgepole pine crop trees resulting in an increased merchantable volume per hectare. The benefit of treatment is that either the same volume (as with no treatment) can be harvested at an earlier age, or more volume will be available at the originally planned harvest age.					
Research Installations or Permanent Sample Plots: The treatment area does not conflict with any known research installations or permanent sample plots.					
Visuals: The treatment area has established visual quality objectives of Partial Retention

Management Objectives:	
1. To maintain the water quality of streams flowing in and adjacent to this unit	
Riparian Classes	Location/Measures Prescribed/ Buffers/ Comments
Streams (NCD, S4, S6)	Major streams and gullied reaches have been removed from the treatment unit. Streams found to be visible from the air during the pre-treatment aerial recce will be protected by establishing 10-20 m no treatment zones. Streams not visible from the air will be treated over. Fertilizer loading zones will not be located within Riparian Management Zones.

Non-classifiable wetland (NCW; NCL; NCD)	Polygon a is 100 meters from a non-classifiable wetland.
Residential Water Intakes	N/A
Watersheds & Water Quality Sampling (if in community watershed)	
The treatment area is not within a community watershed.	

LOGISTICS AND SAFETY

Aerial Forest Fertilization Prescription

Safety: (Distance to hospital and contact information; radio frequencies for access; any safety specific protocols; snags)

Approximately 27 km to Princeton General Hospital.

(250) 295-3233

98 Ridgewood Drive Princeton, BC V0X 1W0

STORAGE/HANDLING OF FERTILIZER

Storage/Transport: (e.g. type of fertilizer; any regulations as far as transport; conditions of storage)

Forest-grade fertilizers are not regulated for rail or road transportation. Because of water solubility, fertilizer must be stored in dry containers and protected from moisture. Storage areas must be secure to prevent wildlife from eating fertilizer – small doses of urea are lethal to ungulates.

Accidental Spills: (e.g. ground, water)

To be handled consistent with the applicator's spill and safety protocols.
