Hi Julie,

Hope you are well – really busy I guess!

Just want to touch base with you regarding NACFOR's FESBC application for intake 5B – Wildfire Risk Reduction. We are proposing to carry out fuel management prescriptions (year 1) and treatments (year 2) for three moderate to high risk areas identified in the 2018 CWPP for Area K and Nakusp. Proposed treatment units include Unit 1 (41.7 ha), Unit 6 (157.5 ha) and Unit 13 (1.8 ha) shown on the attached 2018 CWPP fuel treatment map (still draft as the CWPP hasn't been approved yet). The proposed areas are crown provincial lots outside of the municipal boundary and overlap NACFOR, MOTI and RSTBC tenure. Treatments are intended to reduce the likelihood of a wildfire entering the community and reduce impacts and losses to property and critical infrastructure.

The FES application requires the applicant engage with the land manager to ensure it meets priorities – can you please let us know the process for engagement and how the proposed work aligns with the land manager's strategic planning.

Sorry for this late enquiry – any assistance would be appreciated. We are working away on the application and plan to have it ready by the November 30 deadline.

Thanks,

Frances
