Hi Ron and Dave,

As you know, NACFOR is planning to submit an application to FESBC for fuel management in several areas around Nakusp – please see the attached project description and map – note that Treatment Unit 1 just north of Nakusp does actually extend in to TFL 23 (the car wash road piece). The application proposal includes developing fuel management prescriptions for three treatment units in 2019/20 and carrying out operational fuel management treatments on two units (including the north Nakusp unit) in 2020/21.

Generally, treatments are intended to reduce the likelihood of a wildfire entering the community and reduce impacts and losses to property and critical infrastructure. Most likely, operational work will include reducing stand density, reducing surface fuel loading, pruning trees and removing dead and dying stems; however, we will have more detailed treatment information once the field data is collected and prescription developed next year.

We anticipate that we will have to work with you guys to figure out the cutting authority and silviculture obligation for the area that falls in TFL 23 – although I am not sure what that process is right now. At this point, we would like to ensure that Interfor supports the proposed project and is interested in partnering with NACFOR on the Nakusp and Area K fuel management program in general.

If Interfor is supportive of the application, please let me know (email response is great) by noon tomorrow. Sorry for the late request!

Thanks,

Frances
