Proposed Fuel Management Plan - Nakusp

Nichol, Christine TRAN:EX Thu, Nov 29, 12:21 PM

Good afternoon Enrico,
Thank you for the request for feedback from the Ministry of Transportation and Infrastructure. With respect to the fuel management proposal and for any logging plans created by NACFOR, the Ministry requirements focus on potential risks to the public in provincial rights of way, protection of infrastructure and controlled access corridor management. With those concerns in mind, we request application from the proponent for any of the following proposals:

* construction of access to controlled rights of way for logging and fuel management access
* activation of existing accesses that have been out of service
* fuel management and logging that could impact ground stability or hydrology, that could in turn affect public rights of way or public infrastructure
* activity proposed within public rights of way

With each application, conditions for approval are set that the proponent must adhere to and any permission can be rescinded if Ministry staff deem it necessary to protect the public interest. Please submit individual applications for access or approval at least 4 weeks in advance of your timelines, so we have time for intake and assessment. We will endeavour to respond as quickly as possible.

With these considerations in mind, the Ministry does not oppose the proposed fuel management plan, and we look forward to working with you throughout the project. Please contact me if you have any questions or if the funding agencies require more information.

Sincerely,
Christine Nichol
