Spruce Bark Beetle Report 2015 Fall

2015-PHI-028

ADMINISTRATION

Polygon: PHI028 **Hectares:** 51.78 **Exact Location:** 2km on the Scovil FSR

Walkthrough: 2700m **Number of Probe Pixels:** 2 **Date:** 2015.11.09 **Crew:** J. Cousens, M. Vanderstap

STAND INFORMATION

Site Description: (topography, terrain, timber types, stand age, influences)

The site is located about 1.0km south of the access road. The terrain is sloped with varied aspect as the site surrounds a small hill. Slopes average near 20%. There is planned development in the immediate area. There is old blowdown scattered throughout the polygon as well as root disease. The site is bounded on all sides by a mix of timber and older cutblocks. Timber types within the stand are roughly 60% balsam fir and 40% spruce.

Stand Susceptibility: Moderate **Access:** 2WD, walk

Other Considerations or Limiting Factors: current access is overgrown.

SUMMARY OF CURRENT INFESTATION:

Attack in this stand is currently light to moderate, mostly concentrated on the west and south side of the polygon. Attack is also spread into the cutting permit near the centre of the polygon. Potential for spread is moderate to high. Majority of the attack is on a two year cycle, with one population determined to be on a one year cycle.
