STAND INFORMATION

Site Description: (topography, terrain, timber types, stand age, influences)

This site is situated adjacent to the forestry access road at 35km on the Parsnip West FSR and this road is the boundary for the polygon on the north side. A swamp and creek complex bounds the stand to the Se and mature and immature timber on all other sides. The site is located down a steep bank from the access road but levels out quickly at the bottom. It is composed of mainly spruce and aspen with some living and dead pine. The majority of the timber on this site is under 35cm dbh.

Stand Susceptibility: Low **Access**: 2WD
