

SUMMARY OF CURRENT INFESTATION

Could not access star probe center as on opposite side of river. Walking down to site found a couple of Code 1 attack and grouped them into this site.

ACCESS

From Clearwater FSR, walk from truck 200m @ 180 degrees

SITE FEATURES (Topography, Terrain, Timber Types, Age)

Slope 0-25% West as walk towards site. West edge runs along Clearwater river which is impassable. 60% SPRUCE, larger DBH

SIZE, BOUNDARY and PATTERN OF INFESTATION

Sporadic Code 1 attack in site. Seems to be moving up from the river where high susceptibility.

INCIDENCE AND SEVERITY OF ATTACK

Did not reach plot center, however outside of probe found a few isolated attacks.

RISK OF BEETLE SPREAD and SURROUNDING SITES

Outside site had isolated attack with a low sanitation rating. Appears that the attack is coming up from the Clearwater river in this area and has large DBH susceptible spruce.

ACCESS, OPERABILITY and INTEGRATED RESOURCE MANAGEMENT ISSUES

Close to road down to Clearwater river. River on west end of site.

RECOMMENDATIONS

OPTION 1

TRAP TREE TRAILS

Maybe incorporate a strategy with Site CLE-0067 with trap tree trails.

OPTION 2

MONITOR/ EST. POLYGON

Monitor and/or create a polygon along east side of river to incorporate attack and better measure impact of attack.

LIGHT SCATTERED ATTACK
