(a) survival of species at risk - Grizzly Bear (As per FPPR section 7(2) Notice)

Last Updated: 19-Aug-04

WLAP	OSBG	OSBG S149 - regs S7					yes see section 7 of regs		

Practice Standards:	Default Result:	Comments
		Lakes LRMP idenified two areas of high value grizzly habitat. These include the Klaytunkut Valley and the Sutherland Valley. WLAP emphasize that grizzly occur throughout the TSA and preferred habitats are associated with moister habitats, salmon spawning streams (Babine Lake tributaries) and know denning areas (none identifed) WLAP - Grizzly bear (trails, denning areas) - Reducing access and providing hiding cover, reduce bear human interaction, see grizzly bear strategy for BC don't seed roads with clover it attracts bears. (Lucas lake area) resiliant to logging but strongly impacted by roads and resulting human caused mortality. High public profile adjusts risk up. May not be able to use WHAs in Omineca as GB are not in "recovery" status. MoF - Suggest WLAP list (best to map) areas of importance and consider guidelines from GBCS in plans, Grizzly Bear Management Strategy (GBMS)?

(b) survival of species at risk - Bull Trout (For Information Only)

		WLAP - Restrict access to "meat holes" stagging areas for bull trout (or chance of entire population could be fished out. Sensitive to landscape level cumulative forestry activities (ECA) and stream crossing (passage and sediment). No TSS or WSF have been designated. BFP fisheries consolidation database may help locate possible designations??(Shawn Redden Finns Consulting).

(c) survival of species at risk - Great Blue Heron Sandhill Crane (For Information Only)

Last Updated: 19-Aug-04

WLAP	OSBG	OSBG S149 - regs S7					Yes		

Practice Standards:	Default Result:	Comments
		includes blue Heron and Sandhill Crane WLAP - Rookeries in old growth riparian. Conservation of OG structure in RMA will reduce risks. Risk reduced if a GWM to limit disturbance is put in place. Located Nest could be designated as WHFs. Guidelines - Licensee protocol for protection of nests (for the Queen Charlottes but applies to other areas), Sandhill Crane - Minor increases in RMA on wetlands will reduce risks

(d) survival of species at risk - Fisher (For Information Only)

Last Updated: 19-Aug-04

Resp. Agency	Heirarchy of Direction	Rationale Comments	Area of Application:	HLP Legal	FPC Designation	FPC Objective	FRPA (OSBG s149)	Enabld Designation	Enabld Objective
WLAP	OSBG	OSBG S149 regs S7	Highest value areas include valley bottoms with cottonwood				Yes		

Practice Standards:	Default Result:	Comments
		Landscape level connectivity via mature forest cover is key risk factor. Strong reliance on large DBH cottonwood as dens. Risk could be reduced if rare cottonwood ecosystems were designated as WHFs

(e) survival of species at risk - Wolverine (For Information Only)

Last Updated: 19-Aug-04

Resp. Agency	Heirarchy of Direction	Rationale Comments	Area of Application:	HLP Legal	FPC Designation	FPC Objective	FRPA (OSBG s149)	Enabld Designation	Enabld Objective
WLAP	OSBG	OSBG S149 regs S7					Yes		

Practice Standards:	Default Result:	Comments
		Lack of knowledge on habitat increases risk. Access and how it improves trapper effectiveness is largest issue. Access control will help, but wide ranging nature of beast makes it somewhat inevitable that they will cross valley bottom FSRs that will always be needed.

(f) survival of species at risk - Caribou (Sydney Williams) (For Information Only)

Last Updated: 19-Aug-04

WLAP	OSBG	OSBG S149 regs S7					Yes		

Practice Standards:

Default Result:

Comments WLAP - Interior Goshawk - OGMAs and WTR - associated with mature and old canopy will generally stay in same area, Predictive goshawk nesting model as planning tool to assist in OGMA planning, Guideline - process - if you come across nest in the field - Licensee protocol for protection of nests (for the Queen Charlottes but applies to other areas) Ann H has this.

(b) survival of regionally important wildlife - Mountain Goats (For Information Only)

Last Updated: 19-Aug-04

WLAP	OSBG	OSBG S149 regs S7	Identified goat habitat as per LRMP				Yes		

Practice Standards:

Default Result:

Comments WLAP - Goats mineral licks and natal areas may not correspond to WR areas see Laurence Turney work (more detailed information available for china nose goat pop. From IFPA work done by L. Turney) otherwise see WR for goat - LRMP 47.2 recommends WHA for goat in Tildesley (Note: designation proposal in for Mt Sydney Williams Caribou covering similar area)

(c) survival of regionally important wildlife - Marten (For Information Only)

Last Updated: 19-Aug-04

Resp. Agency	Heirarchy of Direction	Rationale Comments	Area of Application:	HLP Legal	FPC Designation	FPC Objective	FRPA (OSBG s149)	Enabld Designation	Enabld Objective
WLAP	OSBG	OSBG S149 regs S7	old growth forest				Yes		

Practice Standards:

Default Result:

Comments WLAP - Marten (big concern is coarse filter - old seral and mature and CWD) current regs re CWD not adequate = high risk below the snow habitat (hard crust conditions) dependent on CWD with horizontal and vertical development providing access and movement and forage opportunities - risk reduced with better CWD and structural attributes across the landscape. Lots of papers on marten - your choice. Provincial OG order not expected to significantly reduce risk

(d) survival of regionally important wildlife - Lake Trout (For Information Only)

Last Updated: 19-Aug-04

Resp. Agency	Heirarchy of Direction	Rationale Comments	Area of Application:	HLP Legal	FPC Designation	FPC Objective	FRPA (OSBG s149)	Enabld Designation	Enabld Objective
WLAP	OSBG	OSBG S149 regs S7					Yes		

Practice Standards:

Default Result:

Comments WLAP - Lake char (easy to fish out of smaller lakes - need to ID which lakes and plan roads to avoid direct access) Some enhanced RRZ near spawning shoals will reduce risk (need to id spawning shoals). Lake Trout Management in Northern BC (MOE) - LRMP has reduced risk by application of sensitive harvesting adjacent to major lakes (VQOs and Hard links) in addition to identification of backcountry lakes with access restrictions.

(a) winter survival of specified ungulate species - Moose (As per FPPR section 7(2) Notice)

Practice Standards:	Default Result:	Comments
	FPPR s15(1) No results or strategy if defaults apply	WLAP - The riparian reserve and management zone contribute several elements to biodiversity function (e.g. cool, moist microhabitats and connectivity for amphibians, bats, insects, flora and invertebrates, arboreal lichen, wildlife trees for denning and hibernacula) which could be compromised by excessive pruning for removal for blow-down risk, insect, disease or safety.

WLAP - Lakes south corridors are minimal and simply focusing on old growth management and patch size distribution will result in a decline in connectivity over time. Concern that connectivity is being compromised (not enough across the Landscape) . If current AAC (Timber supply) not impacted then more connectivity is desirable ?? (Full return to LRMP BENs recommended).
