Hi Scott:

There is no problem to wait until Friday.

Tom O.

This should be no problem. I'm a bit busy at the moment, so I'll get a proposal to you by Friday. Let me know if that is a problem.

Scott

Hi Scott:

I had checked with the road foreman and he stated that the work has been not done on the West Abutment Bearings. Would you be able to provide engineered drawings for the work that would be required on them. We would have the work done and then would require you to carry out a field visit to verify the work was completed as per the engineered drawings. Could you please let me know if you could do the drawings and secondly provide an estimate of the cost to do the drawings and subsequent field visit to verify the work was completed as per the engineered drawings.

Regards

Hi Scott:

I will check with the Road Foreman to see if it was done. If not we will plan on carrying out the work within the next couple of months. At this time there is no heavy equipment planned to go over the bridge.

Tom O.

Thanks Tom,

Things still look pretty stable, and you appear to be doing a good job of monitoring it regularly. Keep doing what you're doing, and let me know if there is any change.

Has there ever been anything done to the bearing plates? I seem to remember the anchor bolts having been bent and/or snapped off, and that there were going to be steel angles installed to restrain the bearings from sideways movement.

Sincerely,

McELHANNEY CONSULTING SERVICES LTD.

Hi Scott:

Further to our emails concerning the Monitoring of the Downchain Abutement: Chelasie River Bridge please find attached a Summary of the Measurements taken to date. We have just completed measuring the abutement on May 3, 2005 and have included it into the measurements that have been taken since the start of the monitoring program. Todate there hasn't been much movement since May, 2003. We still plan on taking measurements through the summer to see how the abutement is doing. If you have anything to add please reply to this email.
