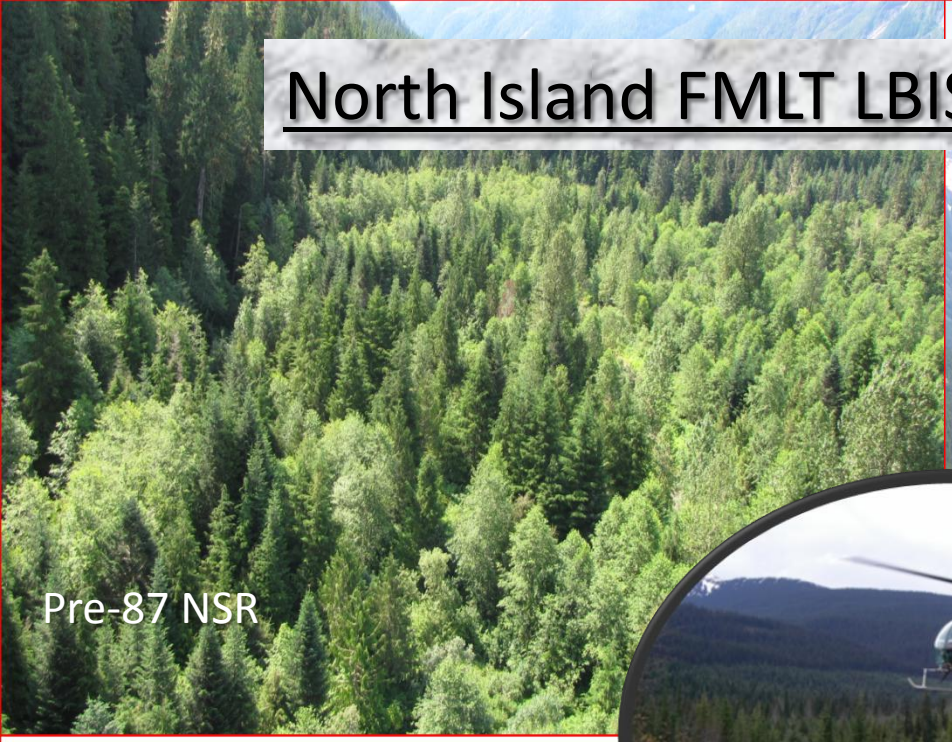
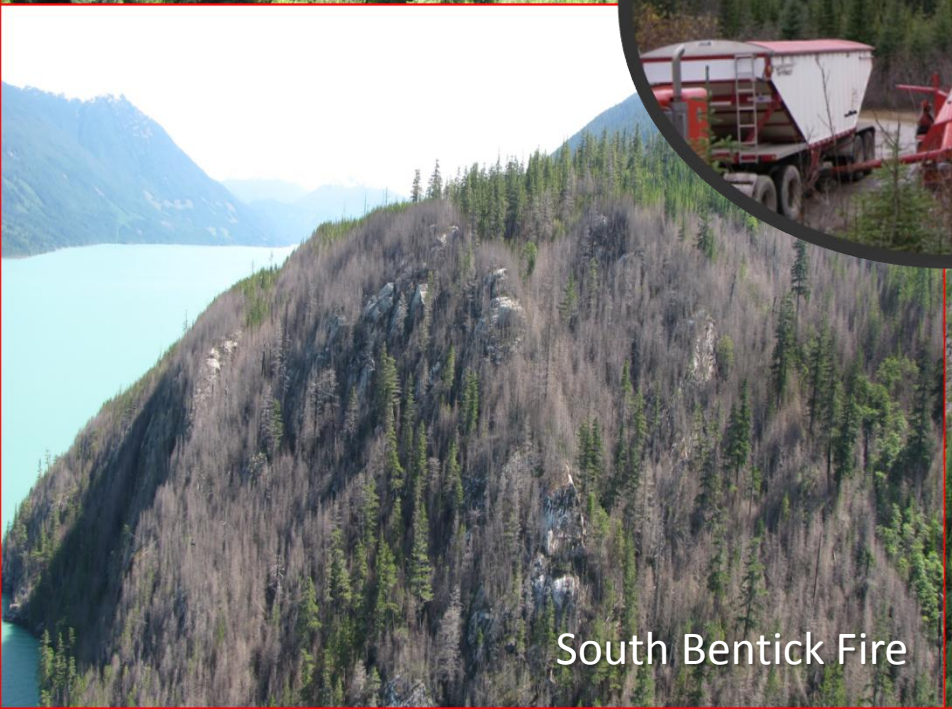
North Island FMLT LBIS Spring Update 2013





LBIS FMLT Update

- Within our District 960 ha has been fertilized with urea in the Port Hardy and Nahwitti areas under LBIS delivered by BCTS and Implemented by Strategic for timber supply mitigation. Approximately another 2500 ha remains to treat. No safety concerns or public complaints that I am aware of.
- North West Hardwoods has done some level of alder spacing under timber supply mitigation which is very scientifically sound when short rotations are desired.
- All pre-87 blocks (known) in RESULTS have been field surveyed and RESULTS has forest cover updates. Approximately 1000 ha gross area.
- Approximately 1700 ha of fires polygons (outside of Parks and Conservancies) have been reviewed for current reforestation. Only one potential area (90 ha) in the Telchako still needs to be ground surveyed but waiting for road access to be improved first. Limited potential due to south facing dry and colluvial materials. This site burned in 2005 and very few naturals were observed.
- Approximately 40 ha of THLB will planted in the Taleomey drainage this spring by BCTS on behalf of the District for current reforestation caused by fire.
- The Bella Coola Community forest has approximately 600 ha of prescription completed for fertilization in the Bella Coola Valley. No TSA opportunities (i.e.: additional ha's) exist to enhance the project scale is my understanding?
- Malcolm Island fertilization with urea is also complete, approximately 900 ha were treated by the North Island Woodlot Association. The District did field calls for public environmental concerns due to lack of information locally about the project.
- 2013/2014 there is no LBIS except for current reforestation, planting where commitments where already made and sown stock that must be planted. So LBIS in theory goes into a 1 year hibernation and comes back online in 2014-2015 to include fertilization again.

DNI Planned Activities on TSA and TFL's
