

Conclusion: Wildlife parameters for the current fire season, including both active and inactive fires, are supplied from various sources. The data is released from operational systems nightly in the public map. Wildlife data may not reflect the current fire situation, and therefore should only be used for reference purposes.

Wildfire data from the incident is updated when practicable and the occurrence of individual fire updates will vary. The information is intended for general purposes only and should not be relied on as accurate because fires are dynamic and circumstances may change quickly. The levels of current fire activity within the mapped fire perimeter can vary widely.
