Disclaimer:
Wildfire perimeters for the current fire season, including both active and inactive fires, are supplied from various sources and are subject to change. Perimeters are provided rapidly to the public map. Wildfire data may not reflect the current fire situation, and therefore should only be used for general planning purposes.

Wildfire perimeter factor: the simplest, is calculated where practicable and the occurrence of individual fire updates is frequent. The factor is calculated from the ratio of fire perimeter circle and should not be relied on as accurate because fires are dynamic and circumstances may change rapidly. Fire activity and resulting activity within the mapped fire perimeters can vary widely.
