Dear Permittee:

Please be advised that effective April 1, 2008 the Ministry of Forests and Range will be implementing part of the Resource Radio Frequency pilot project. All road users will be required to have the proper channels installed for operation on the Maggie Lake Forest Service Road (FSR). Radio frequencies will be posted at the start of the FSR.

It is recommended that permittees have the full bank of new Resource Road frequencies installed. Industry Canada has sent all radio shops the necessary information to upgrade your radios. The initial frequency for the Maggie Lake FSR is:

RR-13A, Frequency 150.560, Tone 114.8

As this is a pilot project, the initial frequency may change if problems with transmissions or reception are encountered.

For more information please view the Ministry of Forests and Range website at <http://www.for.gov.bc.ca/dsi/> or the BC Timber Sales website at <http://www.for.gov.bc.ca/bcts/areas/TSG.htm> or contact Bob Howie, Engineering Specialist, BC Timber Sales, Strait of Georgia Business Area, at (250) 731-3071.

Yours truly,

Trish Balcaen
District Manager
South Island Forest District
