

XADAA UWR

FALL 2022 KISPIOX TSA STEERING COMMITTEE

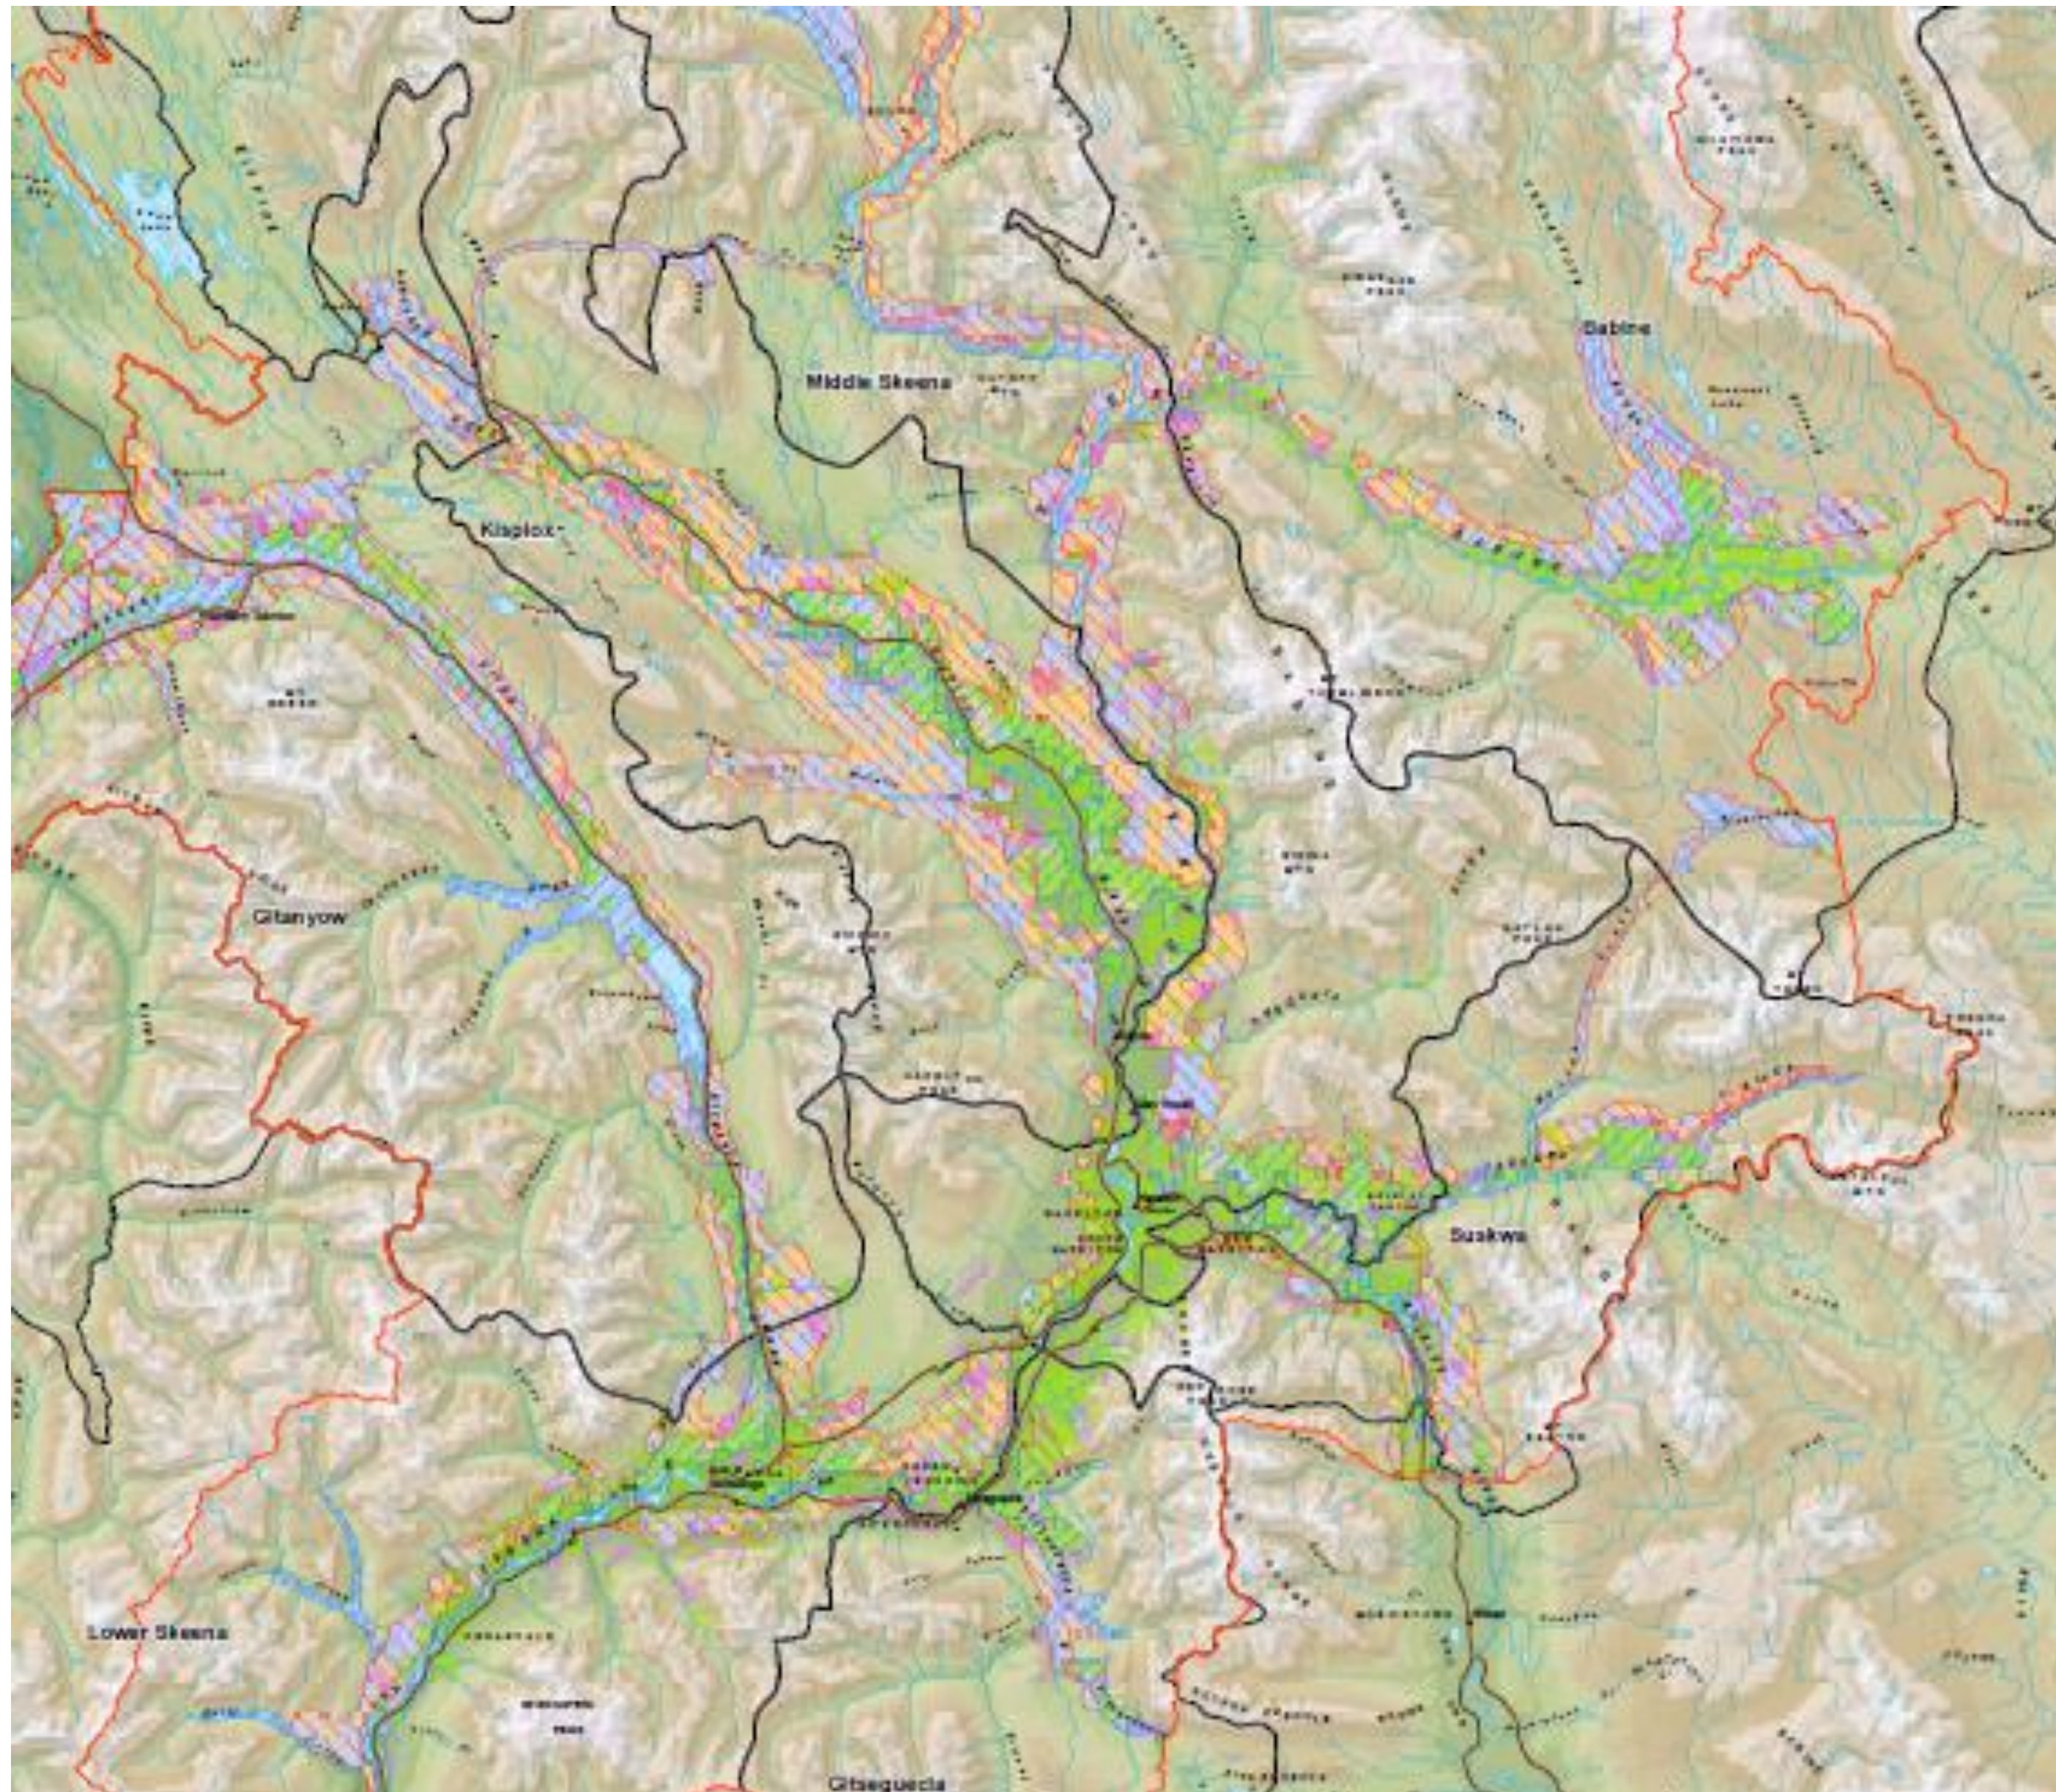

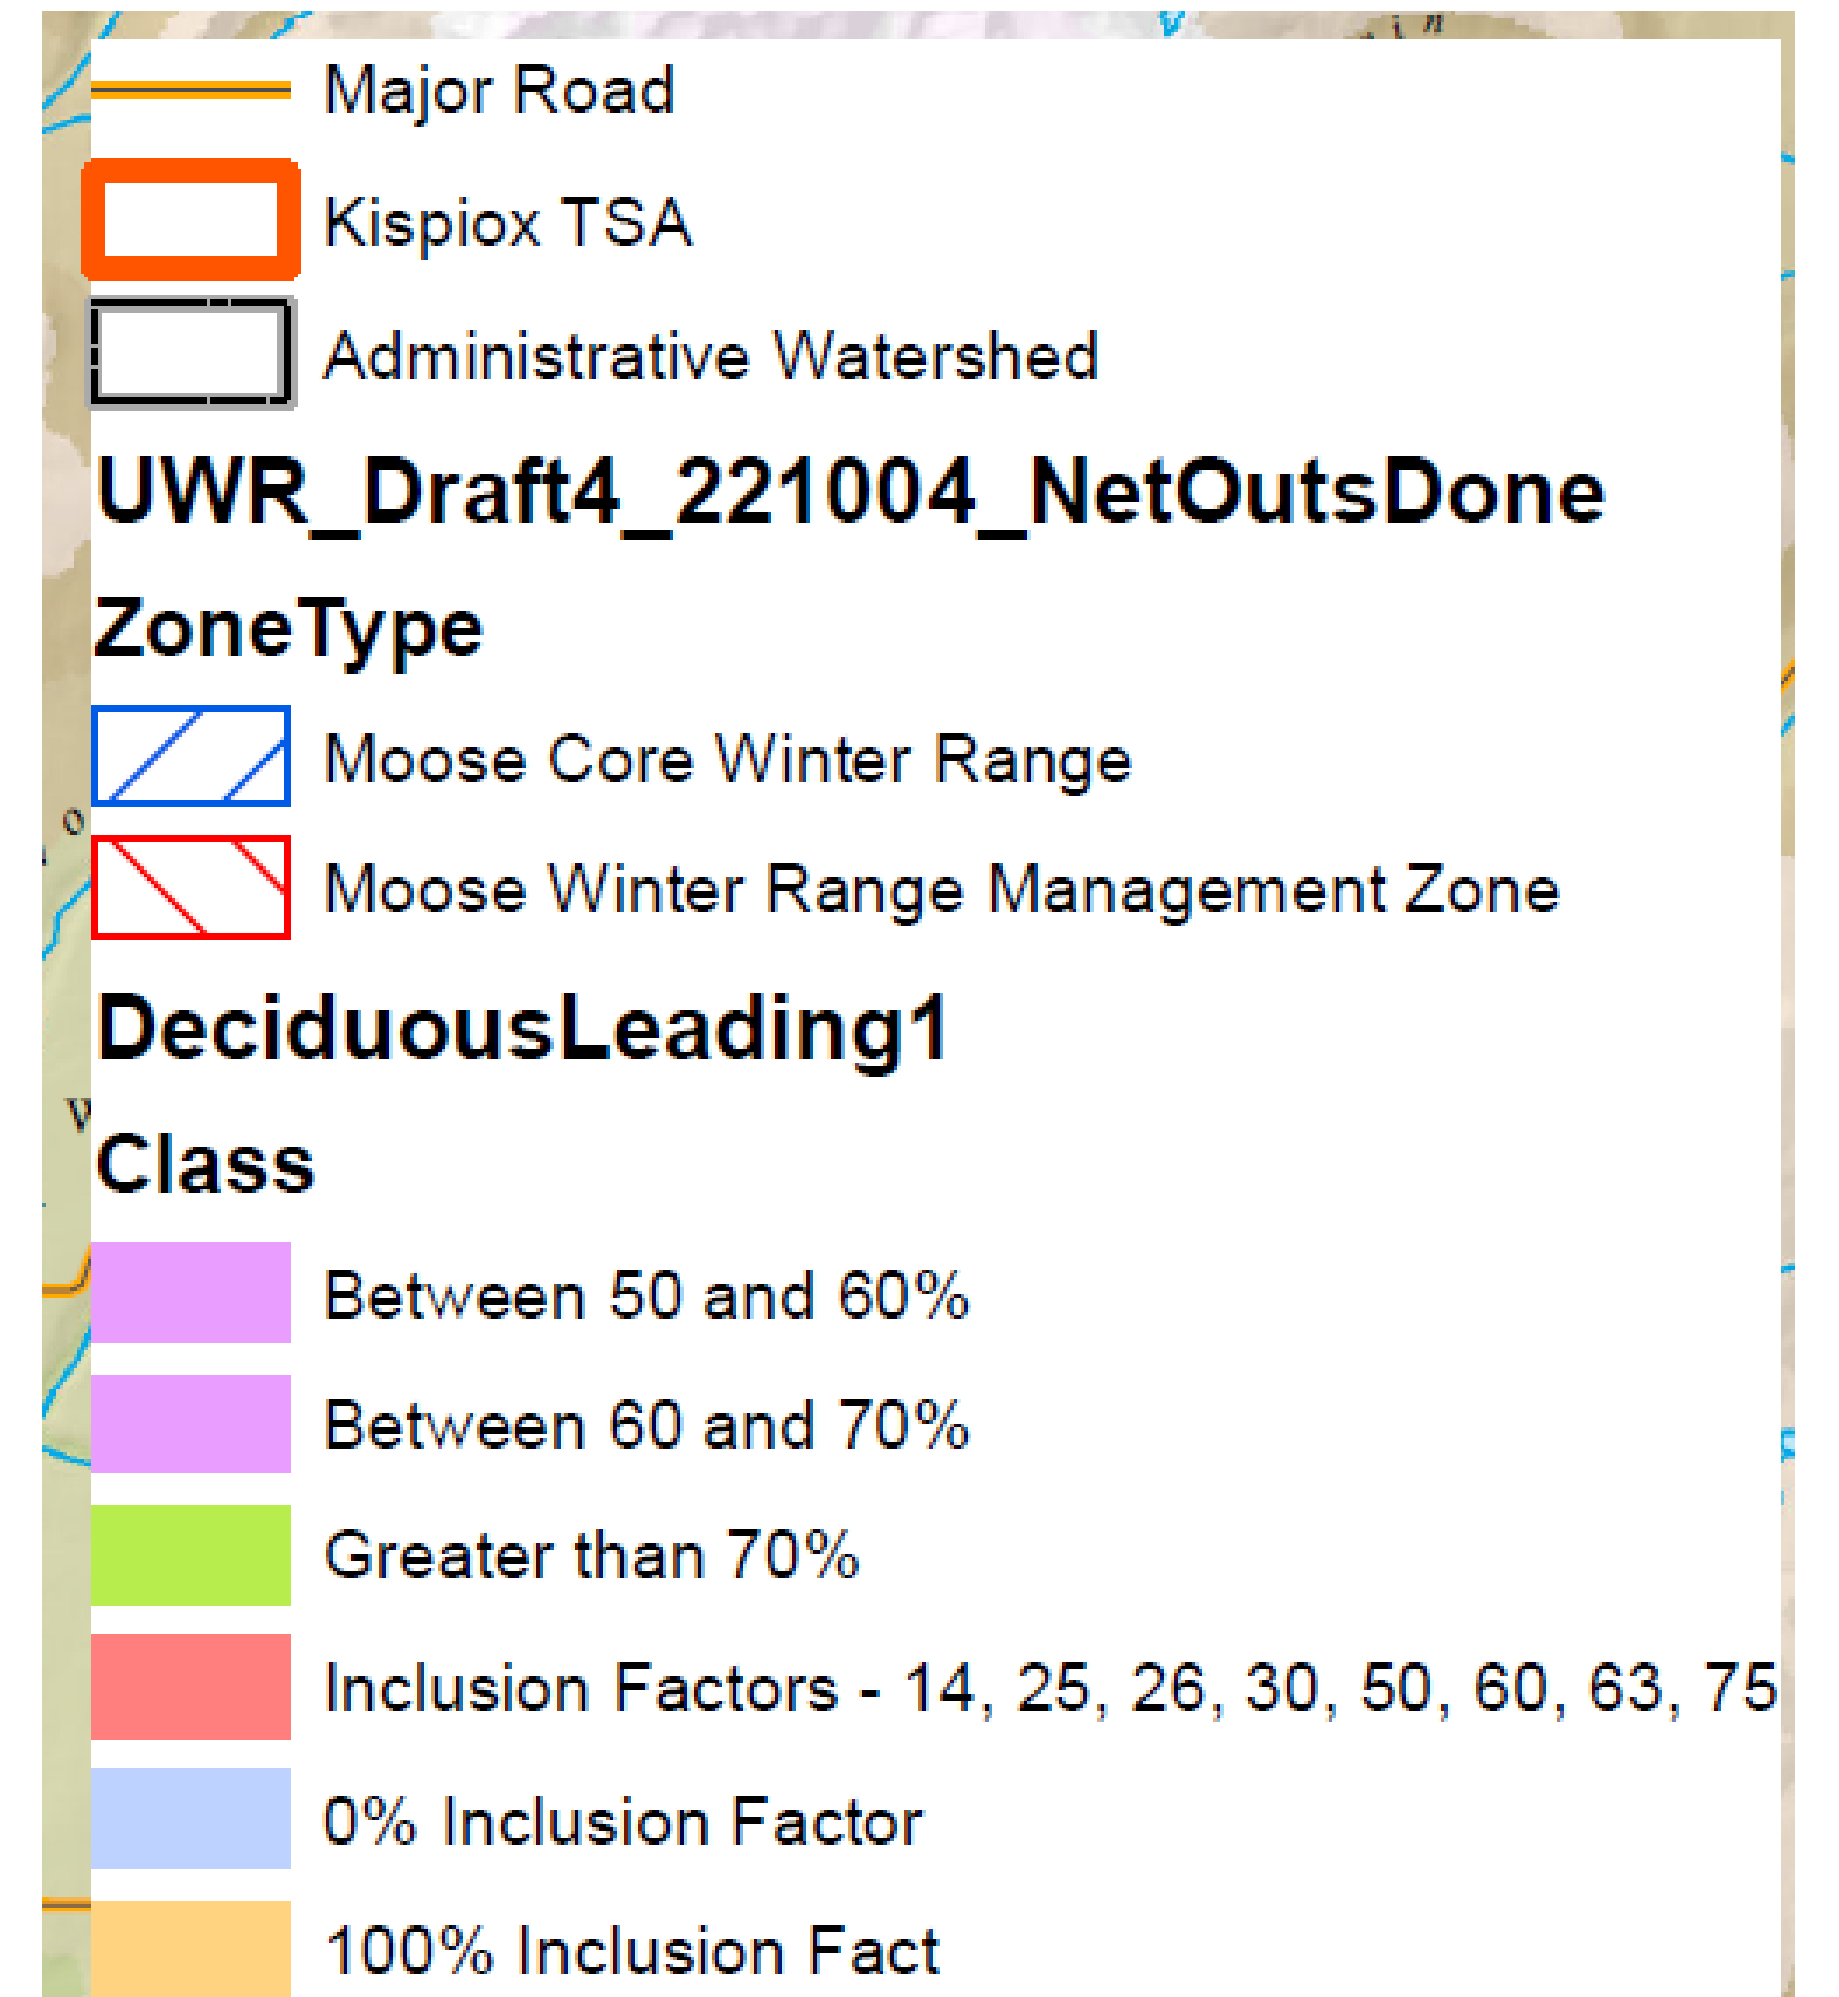

UPDATES

The background of the slide is a grayscale photograph of various leaves and branches. A large, semi-transparent white rectangular area covers the right two-thirds of the image, serving as a background for the text.

HELLO- a brief update on the Xadaa UWR

1. Mapping Snapshot
2. GWMs Deep Dive – briefly ;)
3. Where are we at?
4. Timelines
5. Questions?

Xadaa GWMs – Ready for a Discussion?

Here are some tricky ones...

- Primary forestry activities are prohibited from January 1st to May 14th.
- Ten percent of the largest diameter conifer trees identified by cruise data as being within the top 20th percentile, will be retained and distributed across the forest harvest opening.
- Silviculture activities will include:
 - areas of non-uniform group cluster planting;
 - a minimum inter-tree distance of 1 meter;
 - a minimum of 400 stems/ha and a target stocking standard (TSS) of 800 well-spaced stems/ha of preferred and acceptable species
 - broadleaf tree species as non-deleterious species; and
 - balsam fir (*Abies balsamea*) as preferred species.
- A windfirm, buffer that is >30 m will be retained within areas of forest harvesting openings that are adjacent to linear features.
