

THE PLAN IS THE MAP:

This map, including the tables, legends, and policy objectives, constitutes the Vanderhoof Access Management Plan for Forest Recreation.

This map identifies Access Management Designations for forest recreation opportunities, experiences, and settings and provides policy objectives for road management in these designations.

Access Management Designations for Road Management to provide Forest Recreation Opportunities and Experiences

Policy Objectives:

Motorized Road Access (A) – Road Natural/Road modified RN/RM

Many and various Forest Recreation opportunities exist. Motorized recreation and road access in the majority of the LRP area is limited only by legal, environmental, or operational requirements under the Forest and Range Practices Act.

Quality natural features are present in a variety of opportunities but settings may be noticeably modified. Moderate to good opportunities to experience solitude and closeness to nature with motorised recreational activities (2WD, 4x4, ATV/ORV). Moderate to high levels of interactions with others, in a variety of party sizes, should be expected.

Motorized Road Access Semi Remote (B) - Semi-Primitive Motorised (SPM)

Many and various Forest Recreation opportunities exist. These areas are identified to provide for high quality motorized interactions with more nature based recreation experiences. Excellent opportunity to experience solitude, closeness to nature and challenge. Expectations are for low opportunities to interact with other people in very small party sizes.

While ensuring the continued opportunity for motorised recreational opportunities, roads are to be managed to maintain or reduce overall road density.

Non Road Accessible Recreation (C) - Semi-Primitive Non Motorized (SPNM)

Recreation setting provides a more remote wilderness experience in a high quality natural environment. Opportunities exist to experience solitude and closeness to nature. Expectations are for low opportunities to interact with other people in very small party sizes.

These areas are identified for a low impact recreational experience (ie: hiking/hike-in), with no 2WD, 4x4, or ATV/ORV use for recreation purposes from April 1 – November 30. Roads are managed to maintain or reduce overall road density.

Non Road Accessible Recreation (D) - Semi Primitive Non Motorized, Functionally Non Routed (FNR)

Primarily unroaded areas that are identified for backcountry recreation experiences and opportunities. Recreation setting provides for a very remote wilderness experience in a quality and unique natural environment. Excellent opportunities to experience solitude and closeness to nature. Expectations are for extremely low levels of interaction with others and very small party sizes.

These areas are identified for a low impact recreational experience (ie: hiking/hike-in), with no 2WD, 4x4, or ATV/ORV use for recreation purposes from April 1 – November 30. Future roads are to be temporary in nature and inactive/inaccessible during this timeframe.

Base	Land Use
Vanderhoof Forest District	Private
Survey Parcel Boundaries	Settlement Area
Wildlife Management Units	Crown Lease
Public Highway	Crown Agricultural Lease
Public Secondary Road	Indian Reserve
Permanent Road Network	Parks and Protected Areas
Forest Service Road	
Permitted Road	
Other Road	
Non-motorized Access	
District Municipality	
Access Control Points from 1998-2005 Access Plan	

This map is only intended for use in strategic planning processes. Some recreation site features were amended to provide current best estimate of feature locations. Some trail features were added from non-corporate sources to provide current best estimate of known trail locations. As a result, some feature locations may disagree with corporate sources (LRDW) available as of October 30, 2007.
