4d SITE INDEX
An SI per species is the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from sample trees, a site index estimated from other, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI data is not present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the estimated site index. The site data base inventory Type Group and SI Estimated source code.
