4d SITE INDEX
Site index is the average tree height reference at 50 years. Breast Height Age. SI is based on the age and height of the dominant trees in the stand. Site index is used to estimate the age and height, estimated SI is shown as replace the SI.

4e. ESTIMATED SITE INDEX
If a estimated site index is used for a herb shrub present, e.g. young stands (10yrs). It is decided by a stand which always has a dominant tree component. The SI is based on the inventory Type Group and SI Estimated source code.
