Harvest Unit	Critical Season	Harvest Method	Harvest Strategy	Area	Volume	Comments
☐ 1	Summer	Conventional	Clearcut	31.4	7174	<p>HU 1 :: ***ENSURE NE boundary is laid out properly. Was pulled back in error after cruising***</p> <p>SOILS: Low soil compaction hazard, 10% Maximum Allowable Soil Disturbance. Harvest in such a manner that soil disturbance limits are not exceeded.</p> <p>LEAVE TREE SPECS: Deciduous trees and non-merchantable spruce and balsam shall remain standing where operationally feasible. Where permitted by Worksafe BC regulations, conifer snags may be retained to provide habitat for birds and small mammals. Snags may be top trimmed wherever possible to bring them into compliance with Worksafe BC regulations. Leave trees which pose a safety hazard to workers will be felled where necessary to permit work to be carried out. Felled, wind thrown leave trees or wildlife tree patches will be retained on site to provide coarse woody debris post-harvest.</p> <p>ROAD PERMIT: All roads in this block are under road permit and should be harvested and hauled accordingly.</p> <p>BLOCK HAZARD: Use caution when operating machinery near the boundary adjacent to Williston Lake. This area is known to be associated with erosion and steep banks.</p> <p>-----</p>
