

FSP Summary of changes in FSP release 1.1 Communiqué – June 19, 2007

FSP100 Search Screen

- Renamed result column label from 'Approval Required' to 'DDM Approval Required'.
- Wildcard search of field 'FSP Name' will be based on beginning and end of entered text. Example; entering 'forest' will return all records which contain the text 'forest' anywhere in the 'FSP Name' field.
- To enable the DM to monitor automatically approved amendments a Submitted Date range has been added.
- An "Approval Required" column added to the listed results, to indicate whether or not the amendment required DM approval.
- "Status" column added to search results.

FSP200 Inbox Screen

- Wildcard search of field 'FSP Name' will be based on beginning and end of entered text (same as on FSP100 Search). Example; entering 'forest' will return all records which contain the text 'forest' anywhere in the 'FSP Name' field.
- Allow the submission of spatial data (GML) via ESF to an existing FSP in "Submitted" status or "Draft" status. The spatial-only submission will include the already-assigned FSP_ID and the spatial data.
- Prevent the FSP from moving to "Approved" status until such time as valid GML spatial data is in the database for that FSP submission. (This means the submission must name at least one FDU and provide the affected license numbers and spatial boundaries for that FDU.)
- A DM Decision Letter must also be attached, before the FSP can have its status set to "Approved" or "Rejected" on the FSP700-Workflow screen.

FSP300 Information Screen

- Remove security restriction of only allowing the creator of the FSP to update the record. Now, as long as the user has FSP_SUBMITTER role, is the licensee of the FSP, and the status of the FSP is DFT, then the user can update the FSP.
- Changed "District(s):" selector to a two boxes, one containing available districts and the other containing selected districts.
- Validation check no longer allows "Deactivated" clients to be added.
- Sub-search is now available when in context of the "Workflow" tab.
- Rejected FSP's can no longer be deleted from the system.
- "Comments/Rationale" for "Other" check box on "Workflow" tab changed from text box to a text area.
- Unwanted text "Script Prompt" removed from "Amend FSP" button prompt.
- Added confirmation dialog on "OTBH Details" "Save" buttons.

FSP400 Attachments Screen

- Fixed issue where 'DM Decision Letter' was getting filled out when trying to delete another attachment.
- Attachments can only be deleted by the user who added the attachment.
- "Save" button refreshes to the current attachment being edited.
- Changed label "Map (not XML/GML)" to "FDU map (image and zipped files)"
- To prevent potentially sensitive documents from being viewable by the public, all "Other" attachments contents can only be viewed by:
 - idir users with View All, Reviewer, Decision Maker, or Administrator access while
 - BCEid users who belong to the submitting organization

FSP550 Standards Proposal Screen

- The 'Copy' button has been fixed to copy ALL of the org units and client numbers from the current standards regime in context.
- When page refreshes from a button action the focus is returned to the area of the form they were previously in context of, as opposed to the top of the screen.
