

BC Crown Contaminated Sites Program Site Summary

Mowson Pond

Location: 50° 54' 34" N, 122° 45' 12" W

Status: Long-term Monitoring & Maintenance

The Mowson Pond site is approximately 12 km north-east of Gold Bridge, BC. The site was a mercury ore processing facility that was remediated in 2013. Remediation included removal of hazardous waste soils to an offsite disposal facility, and on-site consolidation and capping of other contaminated soils with an engineered cover such that high risk conditions were removed. An inspection in 2017 found the cover to be in good condition. Site inspections are ongoing.

If you have questions or would like more information, please contact the Crown Contaminated Sites Program by emailing contaminated.sites@gov.bc.ca or visit our website <https://www2.gov.bc.ca/gov/content/environment/air-land-water/site-remediation/contaminated-sites/crown-contaminated-sites-program>.
