

Burned Area Mapping

The Burn Severity map shows a Relativized Burn Ratio Index (RBR) calculated from Landsat 8.

Burn Severity Level should be interpreted with caution as no field-based assessment of burn severity was available for data calibration. Burn Severity Level provides a relative indication of the fire burn severity.

- Fire Perimeter
  - Highways
  - Roads
  - Provincial Protected Areas
  - National Parks
- Burn Severity Level**
- Low Severity
  - Moderate Severity
  - High Severity

| Project Metadata |                   |
|------------------|-------------------|
| N61615           |                   |
| Sensor           | Landsat 8         |
| Pre-fire:        | 01-Aug-17         |
| Post-fire:       | 04-Oct-17         |
| Image quality:   | High quality: Yes |
|                  | No smoke or haze. |
|                  |                   |
