BC Wildfire Service

Date: 2020-11-05

N

Data Sources and Notes:

- Burn Probability analysis completed through contract 2019.
- 20year percentage created using (1-(1- [BP])^20)*1000 where [BP] is value/interations.
- Data is shown using standard classification method Manual Breaks to depict probability as a percentage.

*Disclaimer: This product only considered wildfire areas (>100ha) up to and including the 2017 fire season in the analysis; of these, several were omitted in specific areas eg: Francoville wildfire. The 2017 and onward fire perimeters have been included on the maps to depict areas where wildfires have occurred since analysis, and thus the presented burn probability may need to be reduced to reflect these events.
