Data Sources and Notes:

This map may contain CONFIDENTIAL information. For INTERNAL use only.

- Burn Probability analysis completed through contract 2019.
- 20yr burn probability created using 1:10,000 2019-2020 where 20yr is a value in the future.
- Data is shown using standard classification method Natural Breaks (Jenks) to imply relative risk within the Natural Resource District of interest, and cannot be compared to other Districts, nor evaluated across the Province.
- Disclaimer: This product only considered wildfire events >100ha up to and including the 2017 fire season in the analysis. Of these, several were omitted in specific areas e.g. Nanaimo wildfire. The 2017 and onward fire patterns have been included on the maps to assist areas where wildfires have occurred since analysis, and thus the presented burn probability may need to be reduced to reflect these events.
