Data Sources and Notes:

This map may contain CONFIDENTIAL information for INTERNAL use only

- Burn Probability analysis completed through contact 2018.

- 20-year percentage created using 1:1 to 1:100000000 where 100% is validation.

- Data is shown using standard classification method Natural Breaks (Jenks) to imply relative risk within the Natural Resource District of interest, and cannot be compared to other Districts, not evaluated across the Province.

- Disclaimer: This product only considered wildfire areas (200ha) up to and including the 2017 fire season in the analysis; of these, several were omitted in specific areas eg. Maricopa wildfire. The 2017 and onward fire patterns have been included on the maps to depict areas where wildfires have occurred since analysis, and thus the presented burn probability may need to be reduced to reflect these events.
