- River, Reservoir or Canal
- Sewage Pond, Tailing Pond, Dump

Disclaimer:

All information shown on this map is provided "as is" without any warranty or representation whatsoever. This map is intended for Fire Management Planning purposes only and is not suitable for site-specific decision making. The map contains highly sensitive data. Any other use or widespread reproduction/distribution is strictly prohibited.

PSTA 2017 Disclaimer:

The information presented within the Provincial Strategic Threat Analysis (PSTA) is derived from datasets and models that represent a provincial-level assessment of approximate relative wildfire threat across the land base.

It is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threats, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was created at a provincial scale, so users of the product need to confirm that the initial wildfire threat rating assigned to a given area is accurate by having a qualified professional validate that rating at the forest stand level.

Any limitations of the Provincial Strategic Threat Analysis are related but not limited to the accuracy of: the Vegetation Resources Inventory (VRI); the 17 fuel types identified under the Canadian Forest Fire Behaviour Prediction (CFFBP) System; historical fire data; and assumptions associated with the development of the head fire intensity and spotting impact data layers.

The Provincial Strategic Threat Analysis does not provide an assessment of wildfire threats on private land parcels, nor does it provide an assessment of wildfire threats on private land parcels. The Provincial Strategic Threat Analysis was designed to assess the forested land base, while the FireSmart hazard assessment takes into consideration the wildfire threat to the built-up areas of communities, including structures, vegetation, and other factors that contribute to wildfire threats. The Wildland Urban Interface (WUI) component of the Provincial Strategic Threat Analysis does not take this information into consideration.

Any components within the data that are derived from structure-related information are intended to provide a strategic-level analysis, but they are not intended to represent absolute, site-specific values. Any limitations of this Wildland Urban Interface data are related but not limited to the accuracy of the Terrestrial Resource Inventory Management (TRIM) data; Integrated Cadastral Information Society (ICIS) data; AddressPro data; BC Assessment data; and other local datasets. It is the responsibility of users to determine the suitability of this data for their projects.

The BC Wildlife Service makes no warranties or guarantees, either expressed or implied as to the completeness, accuracy or correctness of the data, nor does it accept any liability arising from any incorrect, incomplete or misleading information contained therein.

All data and deliverables are provided "as is" with no warranty, expressed or implied, including but not limited to fitness for a particular purpose. By accepting the Provincial Strategic Threat Analysis data files or any product derived from the data, the BC Wildlife Service, its staff and contractors are hereby released from any and all responsibility and liability associated with their use.
