Fire Threat Rating 2019

- No Data (Private Land)
- No Data (Private Managed Forest Land)
- Water
- No Threat
- 1 - Low
- 2 - Low
- 3 - Low
- 4 - Moderate
- 5 - Moderate
- 6 - Moderate
- 7 - High
- 8 - High
- 9 - Extreme
- 10 - Extreme

Populated Place / Locality

- Highway
- Main Road
- Rail Line
- River or Reservoir
- Lake
- Wetland
- Icefield or Ice mass
- Mountain
- Ocean

* There are six 2018 Fire Perimeters not shown as revisions to threat as these have not been incorporated. Shovel Lake (R1168), Nappa Lake (R21271), Varun (R11796), Inland Lake (R11521), Chelata River (R11683) and Telegraph Creek (R51947).

Disclaimer:
All information shown on this map is provided "as is" without any warranty or representation whatsoever. This map is intended for Fire Management, Planning, purposes only and is not suitable for site-specific decision making. The map contains highly sensitive data. Any other use or widespread reproduction/distribution is strictly prohibited.

Fuel Treatment Disclaimer:
Compilation of operational fuel management data provided to BC Wildlife but managed through the Community Resiliency Investment (CRI) program and Reporting Structure Updates and Land Status Tracking System (RESULTS). For more information contact the Fire Centre, Local Government or First Nations Band. Issue CRI data current to May 25, 2020. Will include all approved projects from 2013 to this date. Polygons in this data may vary.

PSTA 2019 Disclaimer:
The information presented within the Provincial Strategic Threat Analysis (PSTA) is derived from datasets and models that represent a province-level assessment of approximate relative wildfire threat across the land base.

It is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threat, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was created for a province-wide assessment. The data and assumptions associated with the development of the threat fire intensity and spreading impact data layers.

The Provincial Strategic Threat Analysis does not provide an assessment of wildfire threats on private land parcels, since these are best determined through a site-level assessment such as FireSmart. The Provincial Strategic Threat Analysis was designed to assess the forested land base, with the FuelSmart hazard assessment takes into consideration individual structural components (e.g. roofing and siding), fences, weeds, plants and vegetation. To receive and beyond from the data, the analysis is the application of the Provincial Strategic Threat Analysis to the Wildland Urban Interface (WUI) component of the Provincial Strategic Threat Analysis.

Any components within the data that are derived from structure-related information are intended to provide a strategic-level analysis, but they are not intended to provide a site-specific analysis. Any limitations of this Wildland Urban Interface data are related but not limited to the accuracy of the Terrestrial Resource Inventory (TRI) data, Integrated Catastrophic Information Society (ICIS) data, and the BC Assessment data and other local datasets. It is the responsibility of users to determine the suitability of this data for their projects.

The BC Wildlife Service makes no warranties or guarantees either expressed or implied as to the completeness, accuracy or correctness of the data, nor accept any liability arising from any incorrect, incomplete or misleading information contained therein.

All data and datasets are provided "as is" with no warranty, expressed or implied, and are not intended to be used for a particular purpose. By accepting the Provincial Strategic Threat Analysis, the user agrees to hold the BC Wildlife Service, its staff and contractors, its liability released from any and all responsibility and liability associated with their use.
