\* There are six 2018 Fire Perimeters not shown as revisions to threat on these fires have been incorporated: Silver Lake (R11498), Nettle Lake (R21721), Varun (R11796), Inlet Lake (R11821), Chelada River (R11683) and Telegraph Creek (R61947).

**Disclaimer:**  
All information shown on this map is provided "as is" without any warranty or representation whatsoever. This map is intended for Fire Management Planning purposes only and is not suitable for site-specific decision making. The map contains highly sensitive data. Any other use or reproduction without prior written consent is strictly prohibited.

**Fuel Treatment Disclaimer:**  
Completion of operational fuel management data provided to BC Wildfire but managed through the Community Resiliency Investment (CRI) program and Reporting Structure Updates and Land Status Tracking System (RESULTS). For more information contact the Fire Centre Local Government or Fire Nations Band. Source: CRI data current to May 25, 2020; will include all approved projects from 2013 to this date. Polygons in this date may overlap.

**PSTA 2019 Disclaimer:**  
The information presented within the Provincial Strategic Threat Analysis (PSTA) is derived from datasets and models that represent a provincial-level assessment of approximate relative wildfire threat across the land base.

It is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threat, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was created at a provincial scale; so users of this product need to confirm that the initial wildfire threat rating assigned to a given area is accurate by having a qualified professional validate that rating at the forest stand level.

Any limitations of the Provincial Strategic Threat Analysis are related but not limited to the accuracy of the Vegetation Resources Inventory (VRI), the 17 fuel types identified under the Canadian Forest Fire Behaviour Prediction (CFFB) System, historical fire data, and assumptions associated with the development of the head fire intensity and spotting impact data layers.

The Provincial Strategic Threat Analysis does not provide an assessment of wildfire threats on private land parcels, since these are best determined through a site-level assessment such as FireSmart. The Provincial Strategic Threat Analysis was designed to assess the forested land base, with the FuelSmart hazard assessment taking into consideration individual structural components (e.g. roofing and siding), fences, weeds, plants and vegetation. To review and beyond from the Provincial Strategic Threat Analysis, any areas likely to be affected by a wildfire, the Wildland Urban Interface (WUI) component of the Provincial Strategic Threat Analysis, does not take this information into consideration.

Any components within the data that are derived from structured information are intended to provide a strategic-level analysis, but they are not intended to be used for site-specific values. Any limitations of this Wildland Urban Interface data are related but not limited to the accuracy of the Terrestrial Resource Inventory Management (TRIM) data, Integrated Catastrophic Information Society (ICIS) Society Addressable data, BC Assessment data, and other local datasets. It is the responsibility of users to determine the suitability of this data for their projects.

The BC Wildfire Service makes no warranties or guarantees either expressed or implied as to the completeness, accuracy or correctness of the data, nor accept any liability arising from any incorrect, incomplete or misleading information contained therein.

All data and databases are provided "as is" with no warranty, expressed or implied, including but not limited to, those for a particular purpose. By accepting the Provincial Strategic Threat Analysis for a particular purpose, any product derived from the data, the BC Wildfire Service, its staff and its liability are hereby released from any and all responsibility and liability associated with their use.
