* There are six 2018 Fire Perimeters not drawn as revisions to threat on these fires have been incorporated: Shovel Lake (R1168), Nappa Lake (R21721), Varun (R11796), Inland Lake (R11821), Chelista River (R11683) and Telegraph Creek (R51947).

Disclaimer:

All information shown on this map is provided "as is" without any warranty or representation whatsoever. This map is intended for Fire Management, Planning, purposes only and is not suitable for any specific decision making. The map contains highly sensitive data. Any other use or widespread reproduction/distribution is strictly prohibited.

Fuel Treatment Disclaimer:

Completion of operational fuel management data provided to BC Wildfire but managed through the Community Resiliency Investment (CRI) program, and Reporting Structure Updates and Land Status Tracking System (RESULTS). For More Information contact the Fire Centre, Local Government or First Nations Band. Source: CRI data current to May 25, 2020, will include all approved projects from 2013 to the date. Polygons in this data may overlap.

PSTA 2019 Disclaimer:

The information presented within the Provincial Strategic Threat Analysis (PSTA) is derived from datasets and models that represent a province-level assessment of approximate relative wildfire threat across the land base.

It is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threat, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was developed by the Province of British Columbia, and is not intended to confirm that the initial wildfire threat rating assigned to a given area is accurate, or having a qualified professional validate that rating at the forest stand level.

Any limitations of the Provincial Strategic Threat Analysis are related but not limited to the accuracy of the Vegetation Resources Inventory (VRI), the 17 fuel types identified under the Canadian Forest Fire Behaviour Prediction (CFFB) System, historical fire data, and assumptions associated with the development of the head fire intensity and spotting impact data layers.

The Provincial Strategic Threat Analysis does not provide an assessment of wildfire threats on private and parcels, since these are best determined through a site-level assessment such as FuelNet. The Provincial Strategic Threat Analysis was designed to assess the forested land base, while the FuelNet hazard assessment takes into consideration individual structural components (e.g. roofing and siding), fences, wind, plant and vegetation. To receive and beyond from the structure - any area listed in the Provincial Strategic Threat Analysis is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threat, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was developed by the Province of British Columbia, and is not intended to confirm that the initial wildfire threat rating assigned to a given area is accurate, or having a qualified professional validate that rating at the forest stand level.

Any components within the data that are derived from structured information are intended to provide a strategic-level analysis, but they are not intended to represent absolute, site-specific values. Key limitations of this Wildland Urban Interface data are related but not limited to the accuracy of the Terrestrial Resource Inventory Management (TRIM) data, Integrated Catastrophic Information Society (ICIS) Address/ID data, BC Assessment data, and other local datasets. It is the responsibility of users to determine the suitability of this data for their projects.

The BC Wildfire Service makes no warranties or guarantees either expressed or implied as to the completeness, accuracy or correctness of the data, nor accept any liability arising from any incorrect, incomplete or misleading information contained therein.

All data and datasets are provided "as is" with no warranty, expressed or implied, including but not limited to, those for a particular purpose. By accepting the Provincial Strategic Threat Analysis data, the user or any product derived from the data, the BC Wildfire Service, its staff and contractors, its liability is released from any and all responsibility and liability associated with their use.
