

Map Grid - 94A, SE Wildland Urban Interface Risk Class

Peace River Regional District

Risk Class Label Example
Kelowna RC 1
Risk Class (1 to 5)
WUI Polygon Name

This map is an additional version showing full PSTA coverage due to a high percentage of private land inside the risk class polygon.

- Legend**
- Map Grid
 - Regional Districts
 - Municipality
 - Indian Reserve
 - BC Parks, Reserves & Conservation Lands
 - Regional Local Park
 - *Fire Perimeters: 2021 and > 1.0 ha
 - Fuel Treatment Completed
 - Fuel Treatment Prescribed
 - Fire Smart Community Funding and Supports 1km WUI
 - 2 km Buffer for 6+ Structures / km²
 - WUI Risk Class Polygon
 - Fire Threat Rating 2021
 - No Data (Private Land)
 - No Data (Private Managed Forest Land)
 - Water
 - No Threat
 - 1 - Low
 - 2 - Low
 - 3 - Low
 - 4 - Moderate
 - 5 - Moderate
 - 6 - Moderate
 - 7 - High
 - 8 - High
 - 9 - Extreme
 - 10 - Extreme
 - Populated Place / Locality
 - Highway
 - Main Road
 - Rail Line
 - River or Stream
 - Lake
 - Lake - Intermittent
 - Quarry or Reservoir
 - Flooded Land or Marsh

* There is one 2018 Fire Perimeter (Aldi Lake R01947) drawn in conjunction with the 2021 Fire Perimeter as it was not shown in these fire have not been incorporated. Some fire starts merged with adjacent incidents during the 2021 Season and therefore the maps are only showing the largest all-encompassing perimeter in that area.

Disclaimer:
All information shown on this map is provided "as is" without any warranty or representation whatsoever. This map is intended for Fire Management Planning purposes only and is not suitable for site-specific decision making. The map contains highly sensitive data. Any other use or widespread reproduction is strictly prohibited.

Fuel Treatment Disclaimer:
Compilation of operational fuel management data provided to BC Wildfire but managed through the Community Resiliency Investment (CRI) program, and Reporting Structure Updates and Land Status Tracking System (RESULTS). For more information, contact the Fire Centre, Local Government or First Nations Band. Some CRI data current to June 11, 2021, will include all approved projects from 2013 to this date. Polygons to this date may vary.

PSTA 2021 Disclaimer:
The information presented within the Provincial Strategic Threat Analysis (PSTA) is derived from datasets and models that represent a provincial-level assessment of approximate relative wildfire threat across the land base.

It is intended to provide a strategic-level analysis of many different factors that contribute to wildfire threats, but it is not intended to represent absolute, site-specific values. The Provincial Strategic Threat Analysis was created at a provincial scale, so users of this product need to confirm that the relative wildfire threat rating assigned to a given area is accurate by using a qualified professional valuator that rating at the forest stand level.

Any limitations of the Provincial Strategic Threat Analysis are related but not limited to the accuracy of the Vegetation Resources Inventory (VRI), the 17 fuel types identified under the Canadian Forest Fire Behaviour Prediction (FBP) System, historical fire data, and assumptions associated with the development of the head fire intensity and spotting impact data layers.

The Provincial Strategic Threat Analysis does not provide an assessment of wildfire threats on private land parcels, since these are best determined through a detailed assessment such as FuelTreat. The Provincial Strategic Threat Analysis was designed to assess the forested land base, while FuelTreat based assessment takes into consideration individual structural components (e.g. roofing and siding), fences, waste piles and vegetation 10 metres and beyond from the structure – key areas linked to the spread of fire in a community. The Wildland Urban Interface (WUI) component of the Provincial Strategic Threat Analysis does not take this information into consideration.

Any components within the data that are derived from third-party information are intended to provide a strategic-level analysis, but they are not intended to represent absolute, site-specific values. Any limitations of this Wildland Urban Interface data are related but not limited to the accuracy of the Terrestrial Resource Inventory (TRI) data, Integrated Cadastre Information Society (ICIS) data, AddressBC data, BC Assessment data, and other local datasets. It is the responsibility of users to determine the suitability of this data for their projects.

The BC Wildfire Service makes no warranties or guarantees either expressed or implied as to the completeness, accuracy or correctness of the data, nor accept any liability arising from any incorrect, incomplete or misleading information contained therein.

All data and databases are provided "as is" with no warranty, expressed or implied, including but not limited to those for a particular purpose. By accessing the Provincial Strategic Threat Analysis data, PDF files or any product derived from the data, the BC Wildfire Service, its staff and contractors, are hereby released from any and all responsibility and liability associated with their use.
