ENDED: Flood Warning: Upper Fraser River

Issued: 11June2012 4:15PM

The BC River Forecast Centre is **ending** a **Flood Warning** for:

- **Upper Fraser River at Prince George and upstream**

The Water Survey of Canada gauge at South Fort George (08KE018) is now 8.77 m, down from a peak level of 9.72 m over the weekend. The river is now below flood stage. River levels are expected to drop another 20-30 cm into Tuesday. Due to snow melt from the headwaters, the river is expected to maintain levels around 8.5 m on the South Fort George gauge through this week.

The River Forecast Centre will continue to monitor conditions and will provide updates as conditions warrant.

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
