SENSITIVE SOILS PRESCRIPTION:

Fine textured soils have a very high compaction hazard and a high surface erosion hazard. Ground protection measures will be utilized as required, to ensure that no detrimental impacts occur. Harvesting and site preparation operations will cease immediately should observable compaction and/or rutting occur. If required rehabilitation will be scheduled once the soils are sufficiently well drained. To avoid rutting and understorey disturbance, cease road building and yarding activities during and immediately following periods of heavy rainfall. Avoid ground based systems when wet soil conditions exist. Halt harvesting activities should wet ground conditions lead to any soil degradation.
