Hi Mary and Jonah,

There are 8 interior spruce seedlots going to Fort Nelson. Please remove the regen and their planted trees only from our spruce plots, or where one of their trees is very close (<30 cm) to one of our planting spots. In a year or 2 we can discuss any further removal of their spruce from plots of other surviving seedlots.

Please also ensure that each of our planted seedlings receives a plastic pin flag.

Thanks

Greg

Subject: Ft Nelson site prep/readiness....

Mike D'Aloia is working with their Protection folks re brushing broadleaved spp on their site....likely next week. The site has been planted to spruce 3-4 yrs ago and they are surviving well. Mike does not want to take these out and I suggest we see what survives the first 2 yrs and then remove the Sx as needed amongst the survivors only. Site should be ready 2nd week of June and be plantable for 2-3 wks thereafter.

Michael
