Example of a Vegetation Label:

LINE DESCRIPTION
1 Silviculture Opening and Opening Number
2 Polygon Number and multi-layer stand indicator (L)
3 Species Composition
ex: the most important layer is described as Fd (Douglis Fir) and Hw (Western Hemlock).
4 Age, Height, Crown Closure Class Code - separator: Site Index / estimated SI
ex: a 41-60 year old stand (class 3) with 19.5-28.4 m trees (class 5) with crown closure class 1 (6-15%), SI 20m
5 Vegetated Density Class (or Non-Forest/Productive Description)
ex: a herb polygon with no distinction between forbs and graminoids, shrubs less that 2m.
6 Disturbance History (year - ex: Logged in 1978)

Line 1 - History Record Opening Number

opening number valid for BCGS mapsheet — -opening number has not been assigned

Line 2 - Polygon No. / Multilayer

VRMS Polygon Number - ranging from one to nine digits
L - Multi-layered stand (a separate description of each layer is available in the data base, i.e. 1,2)

4d SITE INDEX
All SI estimates in the model-limits referenced at 50 years breast height age. SI is based on the species height of the leading species. When an accurate SI cannot be obtained from age and height measurements, an estimate may be.

4e. ESTIMATE SITE INDEX
SI is estimated from site factors (e.g. elevation, aspect, slope, soil moisture regime, soil nutrient regime) and present veg. SI is estimated from site factors and present veg. Table provides it. Associated fields in the data base are inventory type (forest and ecosystem) source code.
