Vegetation Data Source: MFLNRO - VRMS / Ownership
Base Map Source: TRIM / Terrain

This map is created from information stored digitally in the BC Geographic Warehouse. The map has been structured to facilitate the display of vegetation data. The base map information (roads, streams, lakes, etc.) is generalized and portrayed may not be complete and up to date. Cadastral, administrative boundaries and the Ownership colour theme are for reference purposes only. (Legend revisions June 2014)

4d SITE INDEX
Site index is the mean dominant height of trees attained at 50 years breast height age. SI is based on the age and height of the tallest trees in the stand. Site index curves are species specific and ecologically estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when access for trees cannot be obtained, e.g. young seral (<10 km). It is derived from stand attributes and ecological information. Site index curves are from the Forest Site Tools Group and SI is entered as one code.
