4d SITE INDEX

All SI are shown in the nearest metre, referenced at 50 years breast height age. Site index curves are those of the species leading species. Where an actual SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when actual SI it was cannot present, e.g. Site index curves are those of the species leading species. Where available, if Associated Soils Info in the data base are missing, Type Group and SI Estimated source code.
