This map is created from inform-ation stored digitally in the BC Geographic Warehouse. The m-ap has been structured to facilitate the use of data in the field and the plotting of specific features. Some of the data may be interpreted and portrayed may not be complete and is to date. Cadastral, administrative boundaries and the Ownership colour frame are for reference purposes only. 4d SITE INDEX

Is the expected tree height achieved at 50 years. Breast Height Age. SI is based on the age and height of the tallest trees in the stand. Site index curves are available for spruce and hybrid, interior Douglas fir, and western hemlock.

4e. ESTIMATED SITE INDEX

Is a numerical value applied to base environment, e.g. young stands (<100yrs). It is derived by a site's which always have trees present (zonal sites) and by using soil and moisture type (required to estimate azonal sites).
