4d SITE INDEX

Of the dominant or the nearest make referenced at 50 years Breast Height Age. It is based on the age and height of the dominant trees in the stand. Site index curves are the mathematical relationship between age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

Site estimated when available SI does not exist/present e.g. young stands in BCVRI. It is denoted by a blank which always has a corresponding Site Index Source, Site Index Type and Productivity Type Group and SI Estimated source code.
