This map is created from information stored digitally in the BC Geographic Warehouse. The map has been structured to display the Vegetation Resource Inventory (VRI) data. Some of the information displayed on this map is derived from point-based data and may not be complete and up to date. Cadastral, administrative boundaries and the Ownership colour theme are for reference purposes only (Legend revisions June 2014)

4d SITE INDEX

SI is estimated at the nearest metre referenced at 50 years. Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees in the polygon. Site information age and height is estimated for a mature stand, or planted at the SI.

4e ESTIMATED SITE INDEX

SI is estimated when available SI trees were present, e.g. young stands (<50yrs). It is denoted by a stand which always has a SI value and a species code. Site Index values are inventory Type Group and Estimated source code.
