4d SITE INDEX
All SI is entered in the nearest metre referenced at 50 years. Breast Height Age. SI is based on the age and height of the dominant trees. Site index curves are derived empirically from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when available SI data is absent,present e.g. SI estimated from site index curves. Estimated SI is also used to populate SI values in Associated fields in the database are Inventory Type Group and SI Estimated source code.
