4d SITE INDEX

All SI are shown in the manual metric referenced at 50 years breast height age. Where SI is derived from a curve with a different breast height age, then an accurate SI cannot be calculated. The age and height estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. recently logged areas. The SI is estimated from the nearest adjacent stand(s) and recorded here in the site level data or in Inventory Type Group and SITE attributed source code.
