Vegetation Data Source: MFLNRO - VRMS / Ownership
Base Map Source: TRIM / Terrain

This map is created from information stored digitally in the BC Geographic Warehouse. The map has been structured to facilitate printing on a standard 8.5" x 11" plotter. Because of the scale of the data, some features may appear cluttered, portrayed may not be complete and up to date. Cadastral, administrative boundaries and the Ownership colour theme are for reference purposes only. (Legend revisions June 2014)

4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years.
Site Index (SI) is the average height of the dominant trees at a specified breast height age. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. young stands (regen) or SI trees are not suitable. Estimated SI is provided if available from the database and inventory Type Group and SI Estimated source code.
