4d SITE INDEX
SI (in metres) is the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index curves which are unchanged, addressed SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. young stands (<10yrs). It is denoted by a slash which always precedes the estimated site index number. Site Index Inventory Type Group and SI Estimated source code.
