4d SITE INDEX

4d SI is based on the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the tallest trees in the stand. Site index curves are available for age and height, estimated to the nearest whole dm, & known as the SI.

4e. ESTIMATED SITE INDEX 4

E is estimated when suitable SI tree age/measurement & a stand site index curve is not available. It is derived from a biogeoclimatic ecosystem classification (BEC) system site index curve and ecosystem type (Group and SI) estimated across units.
